*A Progressive Voice in the Catholic Church in the United States* Arthur J. McDonald,2019-10-29 In the summer of 1966, one year after the conclusion of the Second Vatican Council, a group of nineteen Roman Catholic priests met clandestinely in a church hall in a suburb of Pittsburgh to discuss forming an independent group of ordained clergy. Fearful that meeting publicly might be viewed as a threat to the authority of the local bishop, thus potentially risking sanctioning from him, they used numbers, not names, when circulating the minutes of the first two meetings. Once the word spread among the local clergy that such a group was meeting, and they realized there was widespread interest, they went public and invited all of Pittsburgh's Catholic clergy, including the bishop, to their third meeting. They chose a name, the Association of Pittsburgh Priests (APP), and the group was launched. Shortly after

forming, and with interest from among over two-hundred clergy, APP began advocating for major church renewal and involvement in any number of social justice issues. Regarding church renewal, they grounded themselves in the documents of Vatican II, most especially *Gaudium et Spes*, *Church in the Modern World*, and soon lobbied for optional celibacy and married priesthood, women's ordination, lay empowerment, including the promotion of the early church notion of the priesthood and prophethood of all believers. To this day, APP remains a force for change in the church and in society, ever true to its initial intuition to fully implement the renewal of church and society called for by the bishops at Vatican II.

Hacking APIs Corey J. Ball, 2022-07-05 Hacking APIs is a crash course in web API security testing that will prepare you to penetration-test APIs, reap high rewards on bug bounty programs, and make your own APIs more secure. Hacking APIs is a crash course on web API security testing that will prepare you to penetration-test APIs, reap high rewards on bug bounty programs, and make your own APIs more secure. You'll learn how REST and GraphQL APIs work in the wild and set up a streamlined API testing lab with Burp Suite and Postman. Then you'll master tools useful for reconnaissance, endpoint analysis, and fuzzing, such as Kiterunner and OWASP Amass. Next, you'll learn to perform common attacks, like those targeting an API's authentication mechanisms and the injection vulnerabilities commonly found in web applications. You'll also learn techniques for bypassing protections against these attacks. In the book's nine guided labs, which target intentionally vulnerable APIs, you'll practice:

- Enumerating APIs users and endpoints using fuzzing techniques
- Using Postman to discover an excessive data exposure vulnerability
- Performing a JSON Web Token attack against an API authentication process
- Combining multiple API attack techniques to perform a NoSQL injection
- Attacking a GraphQL API to uncover a broken object level authorization vulnerability

By the end of the book, you'll be prepared to uncover those high-payout API bugs other hackers aren't finding and improve the security of applications on the web.
