Bayesian Designs for Phase I-II Clinical Trials Ying Yuan,Hoang Q. Nguyen,Peter F. Thall,2017-12-19 Reliably optimizing a new treatment in humans is a critical first step in clinical evaluation since choosing a suboptimal dose or schedule may lead to failure in later trials. At the same time, if promising preclinical results do not translate into a real treatment advance, it is important to determine this quickly and terminate the clinical evaluation process to avoid wasting resources. Bayesian Designs for Phase I-II Clinical Trials describes how phase I-II designs can serve as a bridge or protective barrier between preclinical studies and large confirmatory clinical trials. It illustrates many of the severe drawbacks with conventional methods used for early-phase clinical trials and presents numerous Bayesian designs for human clinical trials of new experimental treatment regimes. Written by research leaders from the University of Texas MD Anderson Cancer Center, this book shows how Bayesian designs for early-phase clinical trials can explore, refine, and optimize new experimental treatments. It emphasizes the importance of basing decisions on both efficacy and toxicity.

The people responded well with material and the book was getting so large that we had to stop receiving family histories. This left many without the opportunity to get their families recorded. Late in 1990, Lon had a job started and was not complete therefore the Odd Fellows of Green River Lodge #54 of Hopkinsville and Jewel Rebekah Lodge #14 (the auxiliary of the Odd Fellows) met and voted to compile and have published a continuation of Volume I of the Family Histories to be titled Edition I of Family Histories of Christian County.
