Genomics Data Analysis for Crop Improvement Priyanka Anjoy,Kuldeep Kumar,Girish Chandra,Kishor Gaikwad,2024-02-10 This book addresses complex problems associated with crop improvement programs, using a wide range of programming solutions, for genomics data handling and sustainable agriculture. It describes important concepts in genomics data analysis and

sequence-based mapping approaches along with references. The book contains 16 chapters on recent developments in several methods of genomic data analysis for crop improvements and sustainable agriculture, all authored by eminent researchers who are experts in their fields. These chapters focus on applications of a wide range of key bioinformatics topics, including assembly, annotation, and visualization of next-generation sequencing (NGS) data; expression profiles of coding and noncoding RNA; statistical and quantitative genetics; trait-based association analysis, quantitative trait loci (QTL) mapping, and artificial intelligence in genomic studies. Real examples and case studies in the book will come in handy when applying the techniques. The relative scarcity of reference materials covering bioinformatics applications as compared with the readily available books also enhances the utility of this book. The targeted readers of the book are scientists, researchers, and bioinformaticians from genomics and advanced breeding in different areas. The book will appeal to the applied researchers engaged in crop improvements and sustainable agriculture by using bioinformatics tools, students, research project leaders, and practitioners from the various marginal disciplines and interdisciplinary research.

Neurogenetics Stefan-M. Pulst, 2000 *Neurogenetics* is intended for any physician or scientist who manages patients with inherited diseases of the nervous system. It presents the clinical phenotypes of the most commonly inherited neurologic diseases, and their molecular pathogenesis, followed by a description of the appropriate tests to be used in diagnosis. Two introductory chapters familiarize the nongeneticist with medical genetic terminology and molecular genetic techniques useful in the analysis of genetic disease and genetic testing. Subsequent chapters examine major neurologic disorders caused by single defects, as well as disease phenotypes such as Alzheimer disease or amyotrophic lateral sclerosis which may be caused by defects in single genes, but may

also be seen as sporadic diseases. The genetic components of other common neurologic disorders, such as epilepsy, multiple sclerosis, migraine, and stroke are all covered in detail. The final chapter discusses genetic counseling of symptomatic and pre-symptomatic individuals. Throughout, chapters discuss genotype/phenotype correlations and, where appropriate, animal models for inherited human neurologic diseases. Several chapters are devoted to recently discovered diseases caused by unstable DNA repeats. Special emphasis is placed on conveying how DNA testing can be applied to the daily practice of geneticists and neurologists.

The ABCs of TCP/IP Gilbert Held, 2002-10-29 The TCP/IP protocol suite is changing dynamically to reflect advances in technology and can be considered to represent the protocol for the new millenium. The ABCs of TCP/IP reflects these advances and includes new coverage on: Secure Web transactions Practical subnetting examples Security threats and countermeasures IPsec ICMP utilization and threats This comprehensive reference provides professionals with an overview of the TCP/IP suite and details its key components. While many books on the subject focus on the details and minutiae of TCP/IP, this book covers applications, methods, concepts, and economics associated with the TCP/IP stack. It illustrates how to leverage investments in TCP/IP and how to economize network operations. The ABCs of TCP/IP examines: the manner by which various

protocols and applications operate, addressing issues, security methods, routing, network design constraints, testing methods, troubleshooting, management issues, and emerging applications. It also includes separate chapters focusing on security threats and methods useful for overcoming these threats. About the Author: Gilbert Held is an award-winning author and lecturer. Mr. Held is the author of over 40 books and 400 technical articles covering personal computers and computer communications. Some his recent titles include Building a Wireless Office and The ABCs of IP Addressing, published by Auerbach Publications. Mr. Held can be reached via email at gil_held@yahoo.com.
