

METEREOLOGIA

André Viaut

La meteorología J. Oldani, 2020-05-04 El hombre se ha interesado por predecir los fenómenos meteorológicos desde la más remota Antigüedad, debido a la importante influencia que dichos fenómenos tienen en el desarrollo de la vida en general; no obstante, la meteorología, como ciencia, es relativamente joven. Gracias a sus teorías y estadísticas, en la actualidad podemos entender cómo tienen lugar los distintos fenómenos meteorológicos y explicar con exactitud las causas que los generan. Si la curiosidad le lleva a interesarse por esta ciencia, la presente obra le ayudará a conocer la atmósfera y sus características. Encontrará información precisa y detallada sobre la clasificación y la formación de los vientos, la evolución de los frentes y las perturbaciones, los diversos climas de la Tierra, las nubes y su significado, los mapas meteorológicos y sus símbolos, así como sobre los principales fenómenos atmosféricos (lluvia, nieve, granizo, bruma, niebla...). Todo ello acompañado de numerosas tablas y cuadros explicativos. Con este libro descubrirá el lenguaje de la naturaleza y aprenderá a interpretar los signos y prever las evoluciones de los fenómenos atmosféricos.

Meses y tiempos Ángel Rivera Pérez, 2016-09-27 Meses y tiempos trata sobre los fenómenos atmosféricos más importantes que afectan a España y su predicción pero en convivencia armoniosa con la climatología, la meteorología popular e incluso la poesía. El libro fluye estación a estación y mes a mes y, en cada uno de ellos, tras recordar sus características generales, sus refranes y sus efemérides meteorológicas, describe detalladamente un fenómeno atmosférico característico de ese periodo y sus técnicas de predicción. Así desfilan a través del libro diluvios mediterráneos, temporales atlánticos, sequías, olas de frío o de calor o periodos de buen tiempo, visto todo ello desde la experiencia y la visión personal del autor.

PROBLEMAS DE METEOROLOGÍA Y CLIMATOLOGÍA ZÚÑIGA LÓPEZ Ignacio, CRESPO DEL ARCO Emilia, FERNÁNDEZ SÁNCHEZ Julio, SANTOS BURGUETE Carlos, 2017-02-24 Este libro de problemas está dirigido a los estudiantes de Meteorología y Climatología del grado en Ciencias Ambientales de la UNED, y puede ser de utilidad para estudiantes de las Facultades de Ciencias o de otros programas de enseñanza de carácter científico-técnico en los que se impartan asignaturas similares. Los problemas se encuentran clasificados en 9 capítulos que incluyen: la composición de la atmósfera, la temperatura de la Tierra, la termodinámica de la atmósfera, la estabilidad atmosférica, dinámica y circulación atmosféricas, oceanografía y clasificación climática. El propósito general en la elección y resolución de los problemas ha sido reducir en lo posible los desarrollos matemáticos y hacer énfasis tanto en los mecanismos físicos que

intervienen en los procesos como en la interpretación de los resultados que se obtienen. En cada uno de los capítulos se ofrece una breve introducción, los problemas resueltos correspondientes y una serie de problemas propuestos sin resolver junto con el resultado. Al final del libro se incluyen un glosario, esquemas de cada capítulo con fórmulas y bibliografía complementaria.

Compartiendo el tiempo Ángel Rivera,2016-09-27 Compartiendo el tiempo es un conjunto de cincuenta artículos en los que el autor expone conocimientos, experiencias, opiniones e intuiciones sobre distintas cuestiones de meteorología, climatología y comunicación meteorológica. Parte de ellos están basados en distintos temas expuestos en su blog En el tiempo, mientras que otros están escritos específicamente para este libro. Por la obra discurren sequías, nevadas, huracanes, danas, medicanes o ríos atmosféricos, pero también la componente humana de la meteorología: profesionales, aficionados, hombres y mujeres del tiempo, divulgadores o periodistas. Se trata pues de presentar una visión amplia de la moderna meteorología y climatología construida como un puzle de semblanzas individuales, así como de vivencias y percepciones del autor.

Meteorología - Climatología César Alonso Zuleta,2017-08-14 La Meteorología se ha convertido en los últimos años en una de las más importantes disciplinas en el mundo actual que junto con la Climatología nos describen los fenómenos físicos desarrollados en la atmósfera, complementándose con el análisis para enfocar los efectos hacia los seres vivos y de manera particular a los humanos, ecosistemas. Las dos disciplinas han tomado la posición que desde siglos ya les pertenecía, todo esto gracias al flujo de información mundial y antes de nada por el manejo de datos de los elementos meteorológicos y climáticos por la comunidad científica mundial apoyándose en la bondad de las súper computadoras que pueden analizar millones de datos en los modelos desarrollados para de esta manera predecir futuros acontecimientos en tiempos muy cortos. El libro contiene 13 capítulos. Los cuatro primeros capítulos se relacionan con principios básicos de la atmósfera. Desde el capítulo 5 hasta el 7 se hace una recopilación de las fuerzas mecánicas que actúan sobre la Tierra. Los capítulos 8 y 9 corresponden a la Radiación proveniente del Sol que maneja la mayor parte de la energía del planeta. El capítulo 10 se ocupa de la descripción de la Termodinámica aplicada a los procesos en la atmósfera. Los movimientos del aire están especificados en los capítulos 11, 12 y 13. Se hace un pequeño resumen acerca de los principios de la Climatología.
