Spying Software Development in Google Android Fissha

SeyoumTeshome,2017-06-28 Bachelor Thesis from the year 2011 in the subject Computer Science - IT-Security, Helsinki Metropolia University of Applied Sciences , language: English, abstract: The main purpose was to study the concept behind developing spying software. The goal of this project was to develop a mobile phone tracking application for Google Android phones. The application was expected to include the use of GPS and Cell-ID to track the location of a mobile phone. The Google Android SDK was used to develop the tracking software application. The application was tested on a Google Android mobile phone. The result showed that the development process of location and maps-based applications was fast while using Google Android. This was because of two main reasons. First, Google Android Provided APIs for location-based services such as GPS and Cell-ID. Second, having Eclipse with ADT plug-in as the choice to develop the application led to an easy means of debugging and testing. The tracking application was found important to use since it will allow users to trace lost phones or to locate lost people. The application can be developed further by adding a number of features to it such as running in the background, SMS copying and making a spy call.

Find cell phones' area online by cell tower triangulation utilizing LAC (Location Area Code) and Celled from PC, iphone or Androide phone. Cell tower triangulation utilizes the LAC and Cellid to focus the position of a cellular smartphone. With information from no less than three cell towers, this strategy can ascertain a handset's area exactly.

Each one base station covers a certain region, the more cell towers in your general vicinity, the more precise result it delivers. So the thickness of cell towers decides the precision. For the most part, the thickness is higher in the urban zones particularly at downtown. While in country territories, where there are less cell towers, the result is less precise. Pegasus Laurent Richard, Sandrine Rigaud, 2023-01-17 Featuring an introduction by Rachel Maddow, Pegasus: How a Spy in Our Pocket Threatens the End of Privacy, Dignity, and Democracy is the behind-the-scenes story of one of the most sophisticated and invasive surveillance weapons ever created, used by governments around the world. Pegasus is widely regarded as the most effective and sought-after cyber-surveillance system on the market. The system's creator, the NSO Group, a private corporation headquartered in Israel, is not shy about proclaiming its ability to thwart terrorists and criminals. “Thousands of people in Europe owe their lives to hundreds of our company employees,” NSO's cofounder declared in 2019. This bold assertion may be true, at least in part, but it's by no means the whole story. NSO's Pegasus system has not been limited to catching bad guys. It's also been used to spy on hundreds, and maybe thousands, of innocent people around the world: heads of state, diplomats, human rights defenders, political opponents, and journalists. This spyware is as insidious as it is invasive, capable of infecting a private cell phone without alerting the owner, and of doing its work in the background, in silence, virtually undetectable. Pegasus can track a person's daily movement in real time, gain control of the device's microphones and cameras at will, and capture all videos, photos, emails,

texts, and passwords—encrypted or not. This data can be exfiltrated, stored on outside servers, and then leveraged to blackmail, intimidate, and silence the victims. Its full reach is not yet known. “If they’ve found a way to hack one iPhone,” says Edward Snowden, “they’ve found a way to hack all iPhones.” Pegasus is a look inside the monthslong worldwide investigation, triggered by a single spectacular leak of data, and a look at how an international consortium of reporters and editors revealed that cyber intrusion and cyber surveillance are happening with exponentially increasing frequency across the globe, at a scale that astounds. Meticulously reported and masterfully written, Pegasus shines a light on the lives that have been turned upside down by this unprecedented threat and exposes the chilling new ways authoritarian regimes are eroding key pillars of democracy: privacy, freedom of the press, and freedom of speech.

The Consumer Spyware Industry Adam Molnar,Diarmaid Harkin,2019-08-22 Invasive surveillance software, known as 'spyware', is presently available to general consumer audiences. A sizeable market has emerged of a number of companies who sell spyware targeted at consumers who wish to place a smartphone or personal computer under intensive monitoring. This research focused exclusively on smartphones and discovered that it is relatively easy to purchase software that can remotely collect text messages, phone conversation recordings, GPS location data, and access the camera of a targeted device. Crucially, this data can be collected 'by stealth' with the user of the device having no indicators that their privacy is being compromised.
