No specimen left behind: mass digitization of natural history collections Vincent

Smith, 2012-07-20 Centuries of exploration and discovery have documented the diversity of life on Earth. Records of this biodiversity are, for the most part, distributed across varied and distinct natural history collections worldwide. This makes the task of extracting and mobilising the information within these collections an immense challenge. In this special issue of ZooKeys, 18 papers by 81 authors examine progress and prospects for mass digitising entire natural history collections. These papers provide a snapshot of activity, in what is a fast moving field that is seeing ever-increasing degrees of collaboration across disciplines and between collection-based institutions. Examples of research covered by these articles include a description to efforts digitise 30 million plant, invertebrate and vertebrate specimens at NCB Naturalis in the Netherlands; new scanning and telemicroscopy solutions to digitise the millions of pinned insect specimens held in the Australian National Insect Collection and its European and North American counterparts; citizen science projects being used to crowdsource the transcription of thousands of specimen labels and field notebooks; and new data portals providing central access to millions of biological specimens across Europe. Many of these projects deal with the unique challenges associated with major collections that have built up over several centuries, with different communities of practices

and different user communities. Despite many differences, standards for collection acquisition, preservation and documentation are broadly consistent, meaning that there is sufficient common ground to bring together the enormous amounts of data that are being exposed through mass digitisation efforts. These data will become the new frontier for natural history collection management and research in the next decade.

Invisible No More Robert Greene II,Tyler D. Parry,2021-12-30 Since its founding in 1801, African Americans have played an integral, if too often overlooked, role in the history of the University of South Carolina. *Invisible No More* seeks to recover that historical legacy and reveal the many ways that African Americans have shaped the development of the university. The essays in this volume span the full sweep of the university's history, from the era of slavery to Reconstruction, Civil Rights to Black Power and Black Lives Matter. This collection represents the most comprehensive examination of the long history and complex relationship between African Americans and the university. Like the broader history of South Carolina, the history of African Americans at the University of South Carolina is about more than their mere existence at the institution. It is about how they molded the university into

something greater than the sum of its parts. Throughout the university's history, Black students, faculty, and staff have pressured for greater equity and inclusion. At various times they did so with the support of white allies, other times in the face of massive resistance; oftentimes, there were both. Between 1868 and 1877, the brief but extraordinary period of Reconstruction, the University of South Carolina became the only state-supported university in the former Confederacy to open its doors to students of all races. This first desegregation, which offered a glimpse of what was possible, was dismantled and followed by nearly a century during which African American students were once again excluded from the campus. In 1963, the second desegregation ended that long era of exclusion but was just the beginning of a new period of activism, one that continues today. Though African Americans have become increasingly visible on campus, the goal of equity and inclusion—a greater acceptance of African American students and a true appreciation of their experiences and contributions—remains incomplete. Invisible No More represents another contribution to this long struggle. A foreword is provided by Valinda W. Littlefield, associate professor of history and African American studies at the University of South Carolina. Henrie Monteith Treadwell, research professor of community health and preventative medicine at Morehouse School of Medicine and one of the three African American students who desegregated the university in 1963, provides an afterword.

A Short History of Disruptive Journalism Technologies Will Mari,2019-02-07 A Short History of Disruptive Journalism Technologies provides a swift analysis of the computerization of the newsroom, from the mid-1960s through to the early 1990s. It focuses on how word processing and a number of related affordances, including mobile-reporting tools, impacted the daily work routines of American news workers. The narrative opens with the development of mainframes and their attendant use as databases in large, daily newspapers, It moves on to the minicomputer era and explores initial news-worker experiences with computers for editing and publication. Following this, the book examines the microprocessor era, and the rise of smart terminals, microcomputers, and off-the-shelf hardware/software, along with the increasing use of computers in smaller news organizations. Mari then turns to the use of pre-internet networks, wire-services and bulletin boards deployed for user interaction. He looks at the integration of decentralized computer networks in newsrooms, with a mix of content-management systems and PCs, and the increasing use of pagers and cellphones for news-gathering, including the shift from portable to mobile conceptualizations for these

technologies. A Short History of Disruptive Journalism Technologies is an illuminating survey for students and instructors of journalism studies. It represents an important acknowledgement of the impact of pre-internet technological disruptions which led to the even more disruptive internet- and related computing technologies in the latter 1990s and through the present.

Internet Histories Niels Brügger, Gerard Goggin, Ian Milligan, Valérie Schafer, 2018-12-07 In 2017, the new journal Internet Histories was founded. As part of the process of defining a new field, the journal editors approached leading scholars in this dynamic, interdisciplinary area. This book is thus a collection of eighteen short thought-provoking pieces, inviting discussion about Internet histories. They raise and suggest current and future issues in the scholarship, as well as exploring the challenges, opportunities, and tensions that underpin the research terrain. The book explores cultural, political, social, economic, and industrial dynamics, all part of a distinctive historiographical and theoretical approach which underpins this emerging field. The international specialists reflect upon the scholarly scene, laying out the field's research successes to date, as well as suggest the future possibilities that lie ahead in the field of Internet histories. While the emphasis is on researcher perspectives, interviews with leading luminaries of the Internet's development are also provided. As histories of the Internet become increasingly important, Internet Histories is a

useful roadmap for those contemplating how we can write such works. One cannot write many histories of the 1990s or later without thinking of digital media – and we hope that Internet Histories will be an invaluable resource for such studies. This book was originally published as the first issue of the Internet Histories journal.
