*High Energy and High Dose Ion Implantation* S.U. Campisano, J. Gyulai, J.A. Kilner, P.L.F. Hemment, 1992-06-16 Ion beam processing is a means of producing both novel materials and structures. The contributions in this volume strongly focus on this aspect and include many papers reporting on the modification of the electrical and structural properties of the target materials, both metals and semiconductors, as well as the synthesis of buried and surface compound layers. Many examples on the applications of high energy and high dose ion implantation are also given. All of the papers from Symposia C and D are presented in this single volume because the interests of many of the participants span both topics. Additionally many of the materials science aspects, including experimental methods, equipment and processing problems, diagnostic and analytical techniques are common to both symposia.

**Ion Beam Processing of Materials and Deposition Processes of Protective Coatings** P.L.F. Hemment, J. Gyulai, R.B. Simonton, I. Yamada, J.-P. Thomas, P. Thévenard, W.L. Brown, P.B. Barna, G. Wahl, Yves Pauleau, 2012-12-02 Containing the proceedings of three symposia in the E-MRS series this book is divided into two parts. Part one is concerned with ion beam processing, a particularly powerful and versatile technology which can be used both to synthesise and modify materials, including metals, semiconductors, ceramics and dielectrics, with great precision and excellent control. Furthermore it also deals with the correlated effects in atomic and cluster ion bombardment and implantation. Part two deals with the deposition techniques, characterization and applications of advanced ceramic, metallic and polymeric coatings or thin films for surface protection against corrosion, erosion, abrasion, diffusion and for lubrication of contracting surfaces in relative motion.

**Information and Communication Technologies (ICT) and Precision Livestock (PLF) Applications in Farm Conditions** Demet Canga, Mustafa Boğa, Hatice Nur Kılıç, Mutlu Bulut, 2022-06-15 Information and Communication Technologies (ICT) and Precision Livestock (PLF) Applications in Farm Conditions

**Practical Precision Livestock Farming** Thomas Banhazi, V. Halas, F. Maroto-Molina, 2022-09-28 Precision livestock farming (PLF) technologies have been heavily promoted in the past, but the implementation of these technologies is not easy. Numerous technical challenges need to be solved before PLF technologies will supply the desired information in a reliable and consistent way. Farm implementations regularly encounter difficulties. The practical experience associated with these technologies do not always match their theoretical potential. 93 authors from 16 countries were asked to report on the actual practical experiences technology developers and users had under farm conditions to try and understand this difference between practice and theory. This book aims to eliminate the 'mystery' behind the 'Smart' PLF tools, and presents the hard facts reported by individuals that have practical experience using these technologies. The book also explores various aspects of PLF, including the (1) challenges associated with developing and using various technologies, (2) the importance of training and ethical aspects of PLF tools, and (3) the difficulties related to commercialisation of PLF systems. We hope that the honest presentation of the pros and cons of PLF management tools will help the supporters of precision farming to better use and interact with modern technologies, and thus sustain viable livestock production worldwide.

**Structural Design** James R. Underwood, Michele Chiuini, 1998 Structural Design presents the conceptual and practical underpinnings of basic building design and technology in a single comprehensive source. It provides essential coverage of the integral relationships of structural/architectural form and spatial organization, and an understanding of the impact of load configurations and other key determinants of design. Essential principles as well as structural solutions are visually reinforced with hundreds of architectural drawings, photographs, and other illustrations, making this book truly architect-friendly. Ideal for use as a general and technical reference in the design studio, as a study aid for the architectural registration exam, or as an office resource, Structural Design is a superb companion for the architecture student and practicing professional. It includes: In-depth coverage of steel, wood, reinforced concrete, and masonry, including lateral force generation and design Over 1,000 illustrations and photographs Real-world examples, sample problems, and useful references throughout Conventional and SI unit systems

**Growth Factors in Mammalian Development** I. Y. Rosenblum, Susan Heyner, 2021-05-30 The purpose of this volume is to review and discuss key growth factor systems that have been implicated in embryogenesis. Emphasis is placed on the insulin family of peptides, including insulin and the structurally and functionally related insulin-like growth factors. The initial chapters provide a review of basic topics, including developmental genetics, energy metabolism and hormonal signaling mechanisms, which are important prerequisites to the central theme that follows. The book concludes with a brief review of oncogene expression in early development; this new field has contributed significantly to our understanding of how mitogenic signals activate genetic elements responsible for embryonic growth and development. This book presents information important to cell biologists, endocrinologists, biological chemists, and developmental biologists.

**Ion Implantation into Semiconductors, Oxides and Ceramics** B.G. Svensson, H.A. Atwater, J.K.N. Lindner, P.L.F. Hemment, 1999-03-01 These

proceedings contain the reviewed papers presented at the Symposium J on Ion Implantation into Semiconductors, Oxides and Ceramics, which was held at the Spring Meeting of the European Materials Research Society in Strasbourg, France, 16-19, June 1998. The symposium attracted 110 contributions, with authors from 31 nations in 5 continents. It was thereby the largest in a series of E-MRS ion beam symposia, documenting the importance of ion beam techniques and research in this area. The aim of this symposium was to provide a forum for the discussion of new results in the implantation of materials from three different classes: semiconductors, oxides and ceramics.

*Advanced In-Flight Measurement Techniques* Fritz Boden, Nicholas Lawson, Henk W. Jentink, Jürgen Kompenhans, 2013-02-13 The book presents a synopsis of the main results achieved during the 3 year EU-project Advanced Inflight Measurement Techniques (AIM) which applied advanced image based measurement techniques to industrial flight testing. The book is intended to be not only an overview on the AIM activities but also a guide on the application of advanced optical measurement techniques for future flight testing. Furthermore it is a useful guide for engineers in the field of experimental methods and flight testing who face the challenge of a future requirement for the development of highly accurate non-intrusive in-flight measurement techniques.
