Let Me Play Radford Castro, 2004 Do you ever skip dinner to finish that impossible level? Have you ever tossed your keyboard out the window after losing a game, or swung your controller around because you lost that power up? Would you like to learn a little bit about the underground world of emulation? If you answered yes to any of the above, this book was meant for you. With an insider's look at how people interact with the games and with each other, Radford Castro's tales of gaming are almost as fun as playing the games themselves.

Polarization Mode Dispersion Andrea Galtarossa, Curtis R. Menyuk, 2006-01-17 This book contains a series of tutorial essays on polarization mode dispersion (PMD) by the leading experts in the field. It starts with an introductory review of the basic concepts and continues with more advanced topics, including a thorough review of PMD mitigation techniques. Topics covered include mathematical representation of PMD, how to properly model PMD in numerical simulations, how to accurately measure PMD and other related polarization effects, and how to infer fiber properties from polarization measurements. It includes discussions of other polarization effects such as polarization-dependent loss and the interaction of PMD with fiber nonlinearity. It additionally covers systems issues like the impact of PMD on wavelength division multiplexed systems. This book is intended for research scientists or engineers who wish to become familiar with PMD and its system impacts.

Automata, Languages and Programming Luca Aceto, Ivan Damgaard, Leslie Ann Goldberg, Magnus M. Halldorsson, Anna Ingolfsdottir, Igor Walukiewicz, 2008-06-24 ICALP 2008, the 35th edition of the International Colloquium on Automata, Languages and Programming, was held in Reykjavik, Iceland, July 7-11, 2008. ICALP is a series of annual conferences of the European Association for Theoretical Computer Science (EATCS) which first took place in 1972. This year, the ICALP program consisted of the established Track A (focusing on algorithms, automata, complexity and games) and Track B (focusing on logic, semantics and theory of programming), and of the recently introduced Track C (focusing on security and cryptography foundations). In response to the call for papers, the Program Committees received 477 submissions, the highest ever: 269 for Track A, 122 for Track B and 86 for Track C. Out of these, 126 papers were selected for inclusion in the scientific program: 70 papers for Track A, 32 for Track B and 24 for Track C. The selection was made by the Program Committees based on originality, quality, and relevance to theoretical computer science. The quality of the manuscripts was very high indeed, and many deserving papers could not be selected. ICALP 2008 consisted of five invited lectures and the contributed papers.

Next Generation Optical Network Design and Modelling Andrea Bianco, Fabio Neri, 2013-11-11 Optical networks are leaving the labs and becoming a reality. Despite the current crisis of the telecom industry, our everyday life increasingly depends on communication networks for information exchange, medicine, education, data transfer, commerce, and many other endeavours. High capacity links are required by the large futemet traffic demand, and optical networks remain one of the most promising technologies for meeting these needs. WDM systems are today widely deployed, thanks to low-cost at extreme data rates and high reliability of optical components, such as optical amplifiers and fixed/tunable filters and transceivers. Access and metropolitan area networks are increasingly based on optical technologies to overcome the electronic bottleneck at the network edge. Traditional multi-layer architectures, such as the widely deployed IP/ATM/SDH protocol stack, are increasingly based on WDM transport; further efforts are sought to move at the optical layer more of the functionalities available today in higher protocol layers. New components and subsystems for very high speed optical networks offer new design opportunities to network operators and designers. The trends towards dynamically configurable all-optical network infrastructures open up a wide range of new network engineering and design choices, which must face issues such as interoperability and unified control and management.

Technical Digest Symposium on Optical Fiber Measurements P. A. Williams, 2001-04 Digest of the Symposium on Optical Fiber Measurements sponsored by NIST and the IEEE. Includes 44 papers, with strong international participation. The majority of papers are on dispersion, components and nonlinear optics. Dispersion is the largest category, containing 2 sessions of polarization-mode dispersion, a session of chromatic dispersion and a session for group-delay measurements on fiber Bragg gratings. Component papers include grating metrology as well as receiver and amplifier characterization. Nonlinear measurements fill 2 sessions with measurements of nonlinear coefficient and effective area. A full session of papers relates to novel (engineered) fibers).
