Space Structures 4 G. A. R. Parke, C. M.

Howard, Mr. C. M. Howard, 1993 The diversity of constructions included in this publication on space structures ranges from antenna reflectors and masts positioned in space, to equally exciting terrestrial structures, notably large-span domes, barrel vaults, multi-layered grids, cable and membrane systems, and pneumatic structures. This collection of more than two hundred and twenty papers, presented in two volumes, is the work of leading international experts for presentation at the Fourth International Conference on Space Structures. These two volumes contain a prodigious amount of original and innovative information on space structures that will be of especial interest to engineers, architects and other professionals engaged in the planning, design, fabrication and erection of novel constructions.

Buckminster Fuller Thomas T. K. Zung, 2002-03-20 Buckminster Fuller, inventor, thinker and architect, was one of the best known Americans of the twentieth century. Often compared to Leonardo da Vinci and called the planet's friendly genius, he was the inventor of the geodesic dome, the man who coined the term spaceship earth, and an educator without parallel. Yet, most of his books are out of print today. To remedy this situation, his longtime friend and architectural partner, Thomas Zung, has compiled a Bucky Fuller reader. This anthology consists of chapters selected from twenty of Bucky's many books, each with a new Introduction by such notables as Arthur C. Clarke, Steve Forbes, Calvin Tomkins, Dr. Martin Meyerson,

Sir Harold W. Kroto, Arthur L. Loeb, E. J. Applewhite, and others. Altogether, this book provides an overview of a remarkable intellectual career and the best possible introduction to the man and his thought. Bucky Fuller was one of the most original thinkers and builders that America has ever produced, and this book makes his work available to a new generation at the beginning of a new millennium.
