Pharmacology of Fluorides Ernst W. Alther, 2013-11-21 One might well ask why another volume dealing with biological aspects of compounds of fluorine should be offered to the scientific community, already burdened with a literature too massive to be comfortably ingested. Prior to World War II this question simply did not arise: there was not sufficient interest or literature in the field to warrant anything beyond the classical monograph published by KAJ ROHLM in 1937 • ROHLM's work was directed chiefly toward a better understanding of the effects of fluorides on the general health of workers in the cryolite industry. However, with the demonstration that water-borne fluoride was a causative agent of both mottled enamel and increased resistance to dental caries, the ground work was laid in the 1930's and early 1940's for a greatly increased interest in the biological effects of fluorides in human beings. During this time and earlier for that matter, work also had been going steadily ahead in the less spectacular area of effects produced in poultry and livestock when fluorine-containing rock phosphate was incorporated in the ration, and when pasture land was contaminated with fluorides released during the large-scale conversion of rock phosphate to fertilizer and phosphoric acid. These latter aspects of the problem had led to the development of a respectable literature in plant physiology,

dealing with the effects of fluoride on vegetation.

Probability and Algorithms National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Panel on Probability and Algorithms, 1992-02-01 Some of the hardest computational problems have been successfully attacked through the use of probabilistic algorithms, which have an element of randomness to them. Concepts from the field of probability are also increasingly useful in analyzing the performance of algorithms, broadening our understanding beyond that provided by the worst-case or average-case analyses. This book surveys both of these emerging areas on the interface of the mathematical sciences and computer science. It is designed to attract new researchers to this area and provide them with enough background to begin explorations of their own.

The Antigens Michael Sela, 2014-05-10 The Antigens, Volume III is a comprehensive treatise covering all aspects of antigens, including their chemistry and biology as well as their immunologic role and expression. Topics covered range from microbial polysaccharides and lymphocytic receptors for antigens to antigenic determinants and antibody-combining sites. Allergens and the genetics of allergy are also explored. Comprised of seven chapters, this volume begins with a review of microbial polysaccharides as antigens, followed by a discussion on antigenic determinants and their specific reaction with antibody-combining sites. The reader is then introduced to the reaction of antigens with their specific receptors on lymphocytes. The next four chapters are concerned with several categories of more complex antigens which, in most cases, have yet to be characterized adequately at a molecular level: allergens, histocompatibility antigens, antigens of Mycoplasmatales and chlamydiae, and

animal viruses. The book concludes with an analysis of virus infections and the immune responses they elicit. This monograph will be of interest to practitioners and researchers in immunology, experimental and clinical medicine, biochemistry, and other disciplines.

Recent Advances in Mucosal Immunology Jiri Mestecky, Jerry R. McGhee, John Bienenstock, Pearay L. Ogra, 2012-12-06 Increasing interest in the immunology of mucosal surfaces is obvious from the number of publications in scientific journals and from the frequency of national and international symposia devoted to this subject. Particularly encouraging are the large numbers of young investigators who have chosen to work in this area of theoretical immunology with profound practical implications. The two volumes represented here are the result of an International Congress Of Mucosal Immunology held at the Niagara Falls Convention Center and the Niagara Falls Hilton on June 29 - July 3, 1986. This satellite meeting of the International Congress of Immunology placed emphasis on all aspects of the Mucosal Immune System. This included the regulation of differentiation of mucosal lymphocytes, mucosa-associated lymphoreticular tissue and lymphocyte homing, the immunology of mucosa associated tissues and glands, effector functions in mucosal immunity, and the effects of environmental antigens on the immune response, all of which are included in Volume I. The second volume has emphasized studies of the immune response and effector functions, IgA biosynthesis and transport, IgA proteases and effector functions, developmental aspects and immunodeficiency, the immunopathology of IgA and mucosal immunoprophylaxis. A total of 218 papers are included in these two volumes and a comparison to past meetings held at four to five year intervals indicates the explosive growth of mucosal immunology.

Industrial Competitiveness Gideon Halevi, 2006-06-18 The objectives of industrial management are: - Implementation of the policy adopted by the owners or the board of directors - Optimum return on investment - Efficient utilization of Men, Machine and Money. In other words, industry must make profit. Manufacturing represents only one aspect of the activities of industrial management. Present-day manufacturing methodology does not consider making profit as their primary objective. The manufacturing process requires the knowledge of many

disciplines, such as design, process planning, costing, marketing, sales, customer relations, costing, purchasing, bookkeeping, inventory control, material handling, shipping, and so on. Each discipline considers the problem at hand from a different angle. For example, in the case of the introduction of a new product: - Marketing will evaluate its attractiveness to the customers -The product designer will evaluate methods of achieving product functions - The process planner will evaluate the required resources - Finance will evaluate the required investment - Manpower will consider the work force demands -The manufacturing engineer will consider floor space and material handling - Purchasing and shipping will consider how to store the product x Preface Each discipline optimizes its task to the best of its ability. Each manufacturing discipline has its own objectives and criteria of optimization according to its function. For example: the designer main objective is meeting product specifications; the process planner's main objective is that the items will meet drawing specifications; the production planner's main objectives are meeting the due date, and minimizing work-in-process.

Carriers and Coachmasters Dorian Gerhold, 2005 Roads and road transport before the turnpikes have had a bad press, but little attempt has previously been made to investigate what road services for goods and passengers were really like. This important new book presents a strikingly different picture from the traditional one: a large network of road services which were reliable and regular in both summer and winter. Surprising conclusions are drawn about the state of the roads, the impact of the earliest turnpikes, the failure of stage-coach speeds to increase between the 1650s and 1750s, and the sudden increase in those speeds in the 1760s. A rich collection of illustrations, including many documents, photographs and contemporary drawings, enhances this splendid work. This impressive book examines the London carriers and stage-coach men, and their customers, from the 1650s to the 1760s, when turnpikes began to

have a significant effect. It will transform conventional views of how the metropolis and provinces were linked in the period preceding the Industrial Revolution, and is both essential reading for local and transport historians alike.

Insect Timing: Circadian Rhythmicity to Seasonality D.L. Denlinger, J. Giebultowicz, D.S. Saunders, 2001-06-19 Leading experts in the field bring together diverse aspects of insect timing mechanisms. This work combines three topics that are central to the understanding of biological timing in insects: circadian rhythms, photoperiodism, and diapause. The common theme underlining each of the contributions to this book is an understanding of the timing of events in the insect life cycle. Most daily activities (emergence, feeding, mating, egg laying, etc.) undertaken by insects occur at precise times each day. Likewise, seasonal events such as the entry into or termination from an overwintering dormancy (diapause) occur at distinct times of the year. This book documents such events and provides an up-to-date interpretation of the molecular and physiological events undergirding these activities. The study of circadian rhythms has undergone a flowering in recent years with the molecular dissection of the components of the circadian clock. Now that many of the clock genes have been identified it is possible to track daily patterns of clock-related mRNAs and proteins to link the entraining light cycles with molecular oscillations within the cell. Insect experiments have led the way in demonstrating that the concept of a master clock can no longer be used to explain the temporal organization within an animal. Insects have a multitude of cellular clocks that can function independently and retain their function under organ culture conditions, and they thus offer a premier system for studying how the hierarchical organization of clocks results in the overall temporal organization of the animal. Photoperiodism, and its most obvious manifestation, diapause, does not yet have the molecular underpinning that has been established for circadian rhythms, but recent studies are beginning

to identify genes that appear to be involved in the regulation of diapause. Overall, the book presents the rich diversity of challenges and opportunities provided by insects for the study of timing mechanisms.

The 33 revised full papers presented were carefully reviewed and selected from 81 submissions.
