*A Beauty-ful Boson* Giulia Di Gregorio, 2023-01-01 The analysis described in this thesis is the search for the Higgs boson, decaying into  $b\bar{b}$  pair, in the associated production with a vector boson, in the extreme Higgs boson transverse momentum region where the Higgs boson is reconstructed using the large-R jet technique. The use of the large-R jets allows to add a part of the phase space unexplored so far, which is particularly sensitive to possible new physics. The analysed data have been collected at LHC by the ATLAS detector between 2015 and 2018 at a centre-of-mass energy of  $\sqrt{s} = 13$  TeV. The same dataset has been used to perform the differential  $pp \rightarrow ZH$  and  $pp$

→ WH cross-section measurements used to extract the information on the Higgs couplings and to put limits on Beyond the Standard Model effects. Furthermore the analysis has been re-used to perform a cross-section measurement of the diboson ZZ and WZ processes because the diboson and the Higgs processes have a similar topology. For the first time the ZZ(bb) and WZ(bb) cross-sections are measured at  $\sqrt{s} = 13$  TeV and the observed cross-section measurements are consistent with the Standard Model predictions.

**Strategies for Radiation Therapy Treatment Planning** Ping Xia, PhD, Andrew Godley, PhD, Chirag Shah, MD, Gregory M. Videtic, MD, CM, FRCPC, John Suh, MD, 2018-10-28 Strategies for Radiation Therapy Treatment Planning provides radiation oncologists, physicists, and dosimetrists with a step-by-step guide to implementing external beam treatment plans that meet clinical requirements for each major disease site. As a companion book to the Handbook of Treatment Planning in Radiation Oncology Second Edition, this book focuses on the technical aspects of treatment planning and the major challenges in creating highly conformal dose distributions, referenced to as treatment plans, for external beam radiotherapy. To overcome challenges associated with each step, leading experts at the Cleveland Clinic have consolidated their knowledge and experience of treatment planning techniques, potential pitfalls, and other difficulties to develop quality plans across the gamut of clinical scenarios in radiation therapy. The book begins with an overview of external beam treatment planning principles, inverse planning and advanced planning tools, and descriptions of all components in simulation and verification. Following these introductory chapters are disease-site examples, including central nervous system, head and neck, breast, thoracic, gastrointestinal, genitourinary, gynecologic, lymphoma, and soft tissue sarcoma. The book concludes with expert guidance on planning for pediatric cancers and how to tailor palliative plans. Essential for all radiation therapy team members, including trainees, this book is for those who wish to learn or improve their treatment planning skills and understand the different treatment planning processes, plan evaluation, and patient setup. KEY FEATURES: Provides basic principles of treatment planning Contains step-by-step, illustrated descriptions of the treatment planning process Discusses the pros and cons of advanced treatment planning tools, such as auto-planning, knowledge-based planning, and multi-criteria based planning Describes each primary treatment site from simulation, patient immobilization, and creation of various treatment plans to plan evaluations Includes instructive sample plans to highlight best practices

**Essentials of Thyroid Cancer Management** Ernest L. Mazzaferri, Robert J. Amdur, 2006-02-23 The goal of this book is to provide Endocrinologists, Surgeons, Nuclear Medicine Physicians, and Radiation Oncologists with practical advice about managing patients with thyroid cancer. This book will not replace the excellent publications that focus on a highly specific topic or provide an exhaustive review of major subjects from the perspective of a particular specialty. These kinds of publications will always be an important source of information for both students and experienced practitioners. The void that we see is the lack of a single, concise, up-to-date reference that is applicable to all of the specialists who make clinical decisions about thyroid cancer patients. Essentials of Thyroid Cancer Management will fill this void in a manner that is both user-friendly and technically compreh-

sive. For reading efficiency, this book contains the minimum of text required to explain how to make sound clinical decisions in specific situations. We rely heavily on tables, diagrams, graphs, photographs, and other figures to convey this information. Subjects are addressed in a large number of chapters that each focus on a relatively narrow topic. In some cases, there is overlap between the information in multiple different chapters so the reader does not have to page back and forth between different sections of the book. As occurs in every area of medicine, there is controversy about important issues in the management of thyroid cancer.

**Stereotactic Body Radiation Therapy** Simon S. Lo, Bin S. Teh, Jiade J. Lu, Tracey E. Schefter, 2012-08-28

Stereotactic body radiation therapy (SBRT) has emerged as an important innovative treatment for various primary and metastatic cancers. This book provides a comprehensive and up-to-date account of the physical/technological, biological, and clinical aspects of SBRT. It will serve as a detailed resource for this rapidly developing treatment modality. The organ sites covered include lung, liver, spine, pancreas, prostate, adrenal, head and neck, and female reproductive tract. Retrospective studies and prospective clinical trials on SBRT for various organ sites from around the world are examined, and toxicities and normal tissue constraints are discussed. This book features unique insights from world-renowned experts in SBRT from North America, Asia, and Europe. It will be necessary reading for radiation oncologists, radiation oncology residents and fellows, medical physicists, medical physics residents, medical oncologists, surgical oncologists, and cancer scientists.

Media Imperialism in India and Pakistan Farooq Sulehria, 2018-01-02 Examining anew the notions of media imperialism and globalization of media, this book disrupts the generalised consensus in media scholarship that globalization of media has put an end to media imperialism. One elemental aspect of media imperialism is the structural dependency of television systems in the global South on the imperial North. Taking India and Pakistan as its case studies, this book views globalization of media as the unleashing of processes that have translated into the liberalization of air waves and privatization of television systems whereby commercialization of television is privileged over public interest television. Additionally, it argues that the globalization of media has contributed to corruption, tabloidization, and marginalization of subaltern classes in the Indian and Pakistani media.

**Accelerated Partial Breast Irradiation** David E. Wazer, Douglas W. Arthur, Frank Vicini, 2009-08-11 Accelerated

partial breast irradiation (APBI) is being rapidly introduced into the clinical management of early breast cancer. APBI, in fact, encompasses a number of different techniques and approaches that include brachytherapy, intraoperative, and external beam techniques. There is currently no single source that describes these techniques and their clinical implementation. This text is a concise handbook designed to assist the clinician in the implementation of APBI. This includes a review of the principles that underlie APBI, a practical and detailed description of each technique for APBI, a review of current clinical results of APBI, and a review of the incidence and management of treatment related complications.

*Progress in Automatic Signature Verification* R jean Plamondon, 1994 This volume highlights some of the multidisciplinary aspects of automatic signature verification. The first two chapters serve as an introduction. The first constitutes a review of the literature of the past five years. The second addresses the problem of parallel strategies to construct and optimize feature vectors to describe a signature. The remaining six chapters are divided into two sections: research on static systems and research on dynamic systems. The section on off-line systems describes a system, based on cooperative neural networks for the automatic processing of signatures on checks, for background removal as well as a model-based system that segments the signature into elements which are then processed locally and globally to evaluate the similarity between two specimens. The three papers on on-line systems compare three verification methods, based on statistical models of signature features using the same benchmark, describe a step-wise verification method based on the analysis of the signature components and describe the different design phases of an operational system, focusing on the various decisions that have to be made throughout the development of such a prototype.

*Analysis of Pesticides in Food and Environmental Samples* Jose L. Tadeo, 2008-02-07 Developing safety regulations for pesticides used around the world—in excess of 2.5 million tons annually—requires reliable analytical methods for assessing their impact in food and in the environment. *Analysis of Pesticides in Food and Environmental Samples* presents the most effective techniques for analyzing pesticide residues and other chemical contaminants in foods as well as in soil, water, and air. *Renowned Scientists Report New Data and Advances in the Field* The book introduces sample preparation, extraction, and analytical methods specific to each sample type, including foods from vegetal and animal origin. Other chapters discuss important aspects of quality assurance and the applicability of hyphenated analytical techniques. In addition to a practical chapter on the use of biosensors and immunoassays for monitoring and gathering exposure data, the book addresses regulatory aspects and presents current data on the levels of pesticides found in food and environmental matrices. *Latest Methods Help Scientists Develop Safer, More Effective Pesticides* *Analysis of Pesticides in Food and Environmental Samples* enables scientists to measure and predict the behavior and toxicity of pesticides with a higher degree of accuracy. The methodologies and insight in this timely work will contribute to the development of more effective, less toxic

pesticides as well as better safety regulations.

Image-guided Radiation Therapy Arno J. Mundt,John C. Roeske,2010-12-31 Image Guided Radiation Therapy (IGRT) is a true revolution in the field of radiation oncology. IGRT provides the unprecedented means of conforming does to the shape of the target tissues in 3-dimensions reducing the risk of complications thereby improving the quality of life of irradiated patients. Moreover, IGRT provides the means to deliver higher than conventional doses thus improving the chance of cure in these patients. Despite its established benefits, several barriers exist to the widespread clinical implementation of IGRT. In the past, great concerns existed regarding the large capital outlay needed for both software and hardware. This barrier is less relevant today given the increased reimbursements possible with IGRT. Today, the most significant barrier is education. IGRT is a fundamentally new approach to both treatment planning and delivery. Adoption of the IGRT approach entails new ways of thinking in regard to patient selection, treatment planning and quality assurance measures. Unfortunately, apart from a few University-based short courses, limited resources are available for the physician and physicist interested in learning IGRT.
