Modernity in Black and White Rafael Cardoso,2021-04-15 Modernity in Black and White provides a groundbreaking account of modern art and modernism in Brazil. Departing from previous accounts, mostly restricted to the elite arenas of literature, fine art and architecture, the book situates cultural debates within the wider currents of Brazilian life. From the rise of the first favelas, in the 1890s and 1900s, to the creation of samba and modern carnival, over the 1910s and 1920s, and tracking the expansion of mass media and graphic design, into the 1930s and 1940s, it foregrounds aspects of urban popular culture that have been systematically overlooked. Against this backdrop, Cardoso provides a radical re-reading of Antropofagia and other modernist currents,

locating them within a broader field of cultural modernization. Combining extensive research with close readings of a range of visual cultural production, the volume brings to light a vast archive of art and images, all but unknown outside Brazil.

Underground Suelette Dreyfus,Julian

Assange,2012-01-05 Suelette Dreyfus and her co-author, WikiLeaks founder Julian Assange, tell the extraordinary true story of the computer underground, and the bizarre lives and crimes of an elite ring of international hackers who took on the establishment. Spanning three continents and a decade of high level infiltration, they created chaos amongst some of the world's biggest and most powerful organisations, including NASA and the US military. Brilliant and obsessed, many of them found themselves addicted to hacking and phreaking. Some descended into drugs and madness, others ended up in jail. As riveting as the finest detective novel and meticulously researched, Underground follows the hackers through their crimes, their betrayals, the hunt, raids and investigations. It is a gripping tale of the digital underground.

**Masterplanning Futures** Lucy Bullivant,2012-11-12

Winner of the Urban Design Group's 2014 Book of the Year Award! In the past, spatial masterplans for cities have been fixed blueprints realized as physical form through conventional top down processes. These frequently disregarded existing social and cultural structures, while the old modernist planning model zoned space for home

and work. At a time of urban growth, these models are now being replaced by more adaptable, mixed use plans dealing holistically with the physical, social and economic revival of districts, cities and regions. Through today's public participative approaches and using technologically enabled tools, contemporary masterplanning instruments embody fresh principles, giving cities a greater resilience and capacity for social integration and change in the future. Lucy Bullivant analyses the ideals and processes of international masterplans, and their role in the evolution of many different types of urban contexts in both the developed and developing world. Among the book's key themes are landscape-driven schemes, social equity through the reevaluation of spatial planning, and the evolution of strategies responding to a range of ecological issues and the demands of social growth. Drawing on first-hand accounts and illustrated throughout with colour photographs, plans and visualizations, the book includes twenty essays introduced by an extensive overview of the field and its objectives. These investigate plans including one-north Singapore, Masdar City in Abu Dhabi, Xochimilco in Mexico City and Waterfront Seattle, illuminating their distinct yet complementary integrated strategies. This is a key book for those interested in today's multiscale masterplanning and conceptually advanced methodologies and principles being applied to meet the challenges and opportunities of the urbanizing world. The author's research was enabled by grants from the Commission for Architecture and the Built Environment (CABE), the SFA (the Netherlands Architecture Fund), the Danish Embassy and support from the Alfred Herrhausen Society.

*Pompeii and Herculaneum* Alison E. Cooley, M. G. L. Cooley, 2013-10-01 The original edition of *Pompeii: A*

Sourcebook was a crucial resource for students of the site. Now updated to include material from Herculaneum, the neighbouring town also buried in the eruption of Vesuvius, Pompeii and Herculaneum: A Sourcebook allows readers to form a richer and more diverse picture of urban life on the Bay of Naples. Focusing upon inscriptions and ancient texts, it translates and sets into context a representative sample of the huge range of source material uncovered in these towns. From the labels on wine jars to scribbled insults, and from advertisements for gladiatorial contests to love poetry, the individual chapters explore the early history of Pompeii and Herculaneum, their destruction, leisure pursuits, politics, commerce, religion, the family and society. Information about Pompeii and Herculaneum from authors based in Rome is included, but the great majority of sources come from the cities themselves, written by their ordinary inhabitants – men and women, citizens and slaves. Incorporating the latest research and finds from the two cities and enhanced with more photographs, maps, and plans, Pompeii and Herculaneum: A Sourcebook offers an invaluable resource for anyone studying or visiting the sites.

**European Environmental Law** J. H. Jans, Hans Vedder, 2012 Taking into account new case law of the European courts, recent environmental directives and regulations, and the new provisions of the Lisbon Treaty, this book provides an in-depth analysis of important legal issues of European environmental law. What are the legal grounds for EU environmental policy, and on what principles are directives and regulations based upon? To what extent [are] EU environmental regulations more stringent [than] national environmental standards? What are the requirements the Court of Justice has imposed on the member states implementing environmental directives?

How and to what extent can European environmental law be relied upon and challenged before national courts and the European courts? How do the Treaty rules on the internal market and undistorted competition interfere with national environmental policy? Answers to these and other questions can be found in this book. The book discusses all major environmental directives and regulations, integrating important judgments of the Court of Justice on their interpretations. Furthermore, national case law on the application of European environmental law is also ... taken into account--Provided by publisher.

Protecting future generations through commons Saki Bailey, Gilda Farrell, Ugo Mattei, 2014-01-09 The recent austerity measures currently adopted in numerous European countries assume that a rise in public debt should automatically result in cuts to social programmes and the privatisation of “inefficiently” managed resources. This type of reasoning is being used to justify the destruction of social rights of citizens for the profit of the private sector, resulting in more limited access to the most fundamental resources such as water, nature, housing, culture, knowledge and information, mainly for the most vulnerable members of society. Such a view, informed solely by short-term growth and profit cycles, is endangering access to those resources not only for current generations but for future ones as well. This book is an attempt to go beyond liberal approaches to intergenerational and distributive justice. It emphasises the role of commons and communities of the commons, driven by the desire to defend and perpetuate those fundamental resources under the threat of expropriation by the state and the market. This book also offers policy makers and citizens, who wish to accept their political responsibility by being active and refusing corporate

ideology, some best practices as well as methods and solutions for renewing the configurations of societal relationships through commons, thereby integrating the interests of future generations in the European Community's decision-making processes and institutions. This is a contribution by the Council of Europe and the International University College of Turin to the protection of the dignity of every person, especially of those who, even though unable to enjoy existing social rights, have the right to benefit from choices and policies that ensure that human life remains unspoiled

Lithic Analysis George H. Odell, 2012-12-06 This practical volume does not intend to replace a mentor, but acts as a readily accessible guide to the basic tools of lithic analysis. The book was awarded the 2005 SAA Award for Excellence in Archaeological Analysis. Some focuses of the manual include: history of stone tool research; procurement, manufacture and function; assemblage variability. It is an incomparable source for academic archaeologists, cultural resource and heritage management archaeologists, government heritage agencies, and upper-level undergraduate and graduate students of archaeology focused on the prehistoric period.

**The Presocratics** Edward Hussey, 1995-01-01 This comprehensive account of the history of ancient Greek thought circa 600 to 400 B.C. offers an accessible, nontechnical introduction to Presocratic philosophy. Translations of the surviving fragments of Presocratic writings serve as a foundation from which the discussion proceeds. Also included are maps, notes, and an index of names and terms.

**The Robots Are Coming!** Andres Oppenheimer, 2019-04-30 Staying true to his trademark journalistic approach, Andrés Oppenheimer takes his

readers on yet another journey, this time across the globe, in a thought-provoking search to understand what the future holds for today's jobs in the foreseeable age of automation. *The Robots Are Coming!* centers around the issue of jobs and their future in the context of rapid automation and the growth of online products and services. As two of Oppenheimer's interviewees -- both experts in technology and economics from Oxford University -- indicate, forty-seven percent of existing jobs are at risk of becoming automated or rendered obsolete by other technological changes in the next twenty years.

Oppenheimer examines current changes in several fields, including the food business, legal work, banking, and medicine, speaking with experts in the field, and citing articles and literature on automation in various areas of the workforce. He contrasts the perspectives of techno-optimists with those of techno-negativists and generally attempts to find a middle ground between an alarmist vision of the future, and one that is too uncritical. A self-described cautious optimist, Oppenheimer believes that technology will not create massive unemployment, but rather will drastically change what work looks like.

**Courts in Latin America** Gretchen Helmke, Julio Rios-Figueroa, 2011-01-17 To what extent do courts in Latin America protect individual rights and limit governments? This volume answers these fundamental questions by bringing together today's leading scholars of judicial politics. Drawing on examples from Argentina, Brazil, Chile, Mexico, Colombia, Costa Rica and Bolivia, the authors demonstrate that there is widespread variation in the performance of Latin America's constitutional courts. In accounting for this variation, the contributors push forward ongoing debates about what motivates judges; whether institutions, partisan politics and public support shape inter-branch relations; and the importance of judicial attitudes and legal culture. The authors deploy a range of methods, including qualitative case studies, paired country

comparisons, statistical analysis and game theory.
