Literature 1972, Part 2 S. Böhme,W. Fricke,U. Güntzel-Lingner,F. Henn,D. Krahn,U. Scheffer,G. Zech,2013-04-18 Astronomy and Astrophysics Abstracts, which has appeared in semi-annual volumes since 1969, is de voted to the recording, summarizing and indexing of astronomical publications throughout the world. It is prepared under the auspices of the International Astronomical Union (according to a resolution adopted at the 14th General Assembly in 1970). Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics. Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months. This time interval is near to that achieved by monthly abstracting journals, com pared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user. Volume 8 contains literature published in 1972 and received before March 15, 1973; some older liter ature which was received late and which is not recorded in earlier volumes is also included.

Mobile Strike Forces in Vietnam 1966–70 Gordon L. Rottman,2013-07-20 US Special Forces in Vietnam created the Civilian Irregular Defence Group (CIDG), a large paramilitary organization designed to protect the local population from Viet Cong incursions, whilst conducting border surveillance, raids and combat patrols in the local area. Their camps were often overrun and having no spare manpower the US Special Forces created dedicated reaction units which could act in a responsive and flexible manner Mobile Strike (MIKE) Forces. This book examines the MIKE Force units, which were formed from the CIDG, the parachute and airmobile training they were given, and the operations that they undertook, from relieving friendly camps to independent offensive operations, providing the first organizational history of the MIKE forces in combat.

X- and Gamma-Ray Astronomy H. Bradt,R. Giacconi,2012-12-06 The IAU Symposium No. 55 on 'X-Ray and Gamma-Ray Astronomy' has occurred, not entirely by coincidence, at an important moment in the development of these new branches of observational astronomy. In X-ray astronomy the data from the first X-ray observatory UHURU have contributed to a new view of the X-ray sky and a new conception of the nature and properties of galactic and extragalactic X-ray sources. In gamma-ray astronomy the exciting and often controversial nature of the results underlines the importance of the forthcoming launch of SAS-B, the first orbiting y-ray observatory. As Bruno Rossi reminds us (p. I), the Symposium occurred almost exactly ten years after the first detection of the X-ray star Sco X-I. During this time we have moved from the detection of a handful of the nearest and brightest sources to the detailed study of the nature of stellar sources in the farthest reaches of our own galaxy and in external galaxies of the local group. The detection of pulsating X-ray sources in bi nary systems permits the measurement of pulsation periods, and orbital parameters with precisions comparable to any yet achieved with traditional observational techniques. The strong indications that most X-ray sources are extremely compact objects give us confidence that X-ray astronomy will playa significant and possibly decisive role in the study of stars near the end point of stellar evolution.
