Virtual Cities Konstantinos Dimopoulos,2020-11-12 Virtual cities are places of often-fractured geographies, impossible physics, outrageous assumptions and almost untamed imaginations given digital structure. This book, the first atlas of its kind, aims to explore, map, study and celebrate them. To imagine what they would be like in reality. To paint a lasting picture of their domes, arches and walls. From metropolitan sci-fi open worlds and medieval fantasy towns to contemporary cities and glimpses of gothic horror, author and urban planner Konstantinos Dimopoulos and visual artist Maria Kallikaki have brought to life over forty game cities. Together, they document the deep and exhilarating history of iconic gaming landscapes through richly illustrated commentary and analysis. Virtual Cities transports us into these imaginary worlds, through cities that span over four decades of digital history across literary and gaming genres. Travel to fantasy cities like World of Warcraft's Orgrimmar and Grim Fandango's Rubacava; envision what could be in the familiar cities of Assassin's Creed's London and Gabriel Knight's New Orleans; and steal a glimpse of cities of the future, in Final Fantasy VII's Midgar and Half-Life 2's City 17. Within, there are many more worlds to discover - each formed in the deepest corners of the imagination, their immense beauty and complexity astounding for artists, game designers, world builders and, above all, anyone who plays and cares about video games.

Making Software Andy Oram,Greg Wilson,2010-10-14 Many claims are made about how certain tools, technologies, and practices improve software development. But which claims are verifiable, and which are merely wishful thinking? In this book, leading thinkers such as Steve McConnell, Barry Boehm, and Barbara Kitchenham offer essays that uncover the truth and unmask myths commonly held among the software development community. Their insights may surprise you. Are some programmers really ten times more productive than others? Does writing tests first help you develop better code faster? Can code metrics predict the number of bugs in a piece of software? Do design patterns actually make better software? What effect does personality have on pair programming? What matters more: how far apart people are geographically, or how far apart they are in the org chart? Contributors include: Jorge Aranda Tom Ball Victor R. Note-by-Note Cooking Hervé This, 2014-10-21 A renowned chemist and cooking pioneer breaks down the properties and benefits of cooking with molecular gastronomy. 1-Octen-3-ol, which has a scent of wild mushrooms; limonene, a colorless liquid hydrocarbon that has the smell of citrus; sotolon, whose fragrance at high concentrations resembles curry and at low concentrations, maple syrup or sugar; tyrosine, an odorless but flavorful amino acid present in cheese—these and many other substances, some occurring in nature, some synthesized in the laboratory, make it possible to create novel tastes and flavors in the same way that elementary sound waves can be combined to create new sounds. Note-by-note cooking promises to add unadulterated nutritional value to dishes of all kinds, actually improving upon the health benefits of so-called natural foods. Cooking with molecular compounds will be far more energy efficient and environmentally sustainable than traditional techniques of cooking. This new way of thinking about food heralds a phase of culinary evolution on which the long-term survival of a growing human population depends. Hervé This clearly explains the properties of naturally occurring and synthesized compounds, dispels a host of misconceptions about the place of chemistry in cooking, and shows why note-by-note cooking is an obvious—and inevitable—extension of his earlier pioneering work in molecular gastronomy. Includes an appendix with representative selection of recipes, vividly illustrated in color. “Taking kitchen science to a whole new (molecular) level, Hervé This is changing the way France—and the world—cooks.”—Gourmet “[This] explores the science behind shape, consistency, odor, and color, giving readers the knowledge to create their own magnum opus in the kitchen.”—Discover

Dead Astronauts Jeff VanderMeer, 2019-12-03 A 2020 LOCUS AWARD FINALIST Jeff VanderMeer's *Dead Astronauts* presents a City with no name of its own where, in the shadow of the all-powerful Company, lives human and otherwise converge in terrifying and miraculous ways. At stake: the fate of the future, the fate of Earth—all the Earths. A messianic blue fox who slips through warrens of time and space on a mysterious mission. A homeless woman haunted by a demon who finds the key to all things in a strange journal. A giant leviathan of a fish, centuries old, who hides a secret, remembering a past that may not be its own. A raving madman who wanders the desert lost in the past, haunted by his own creation: an invisible monster whose name he has forgotten and whose purpose remains hidden.

A'Kyria Our Own Game Company, 2011-02-15 This is A'Kyria.... Somewhere out in space lies the edge of the universe; a point where there is no more void, but an anti-void...or a full space. It is a wall of matter so wide, so far reaching that the beings of a thousand planets cannot trace the end of it. It is where dark matter ends and white matter begins. The end of the universe, it seems, is just the beginning of a world so vast that physics must discover new laws to explain it. The surface is merely the edge of where one stage of the universe transitions into the next. The mysterious white matter has mass but is not effected by or generates gravity. Other mass centers create gravity; they can exist anywhere and in any combination. In this Universe the types of lands are as diverse as the imagination can create. Suns orbit some lands to create rings of life along the endless surface. Our forbears who believed that the sun orbited the planet would find their beliefs valid. Life might exist in a figure 8 set of rings around cavern entrances, radiating areas from tropical to glacial. Moons or planetoids could spin around their own centers creating kaleidoscopes of orbiting bodies. In other areas, suns might exist below the surface creating cavernous lands that cover the surface like lichen; a Dyson sphere with the star positioned in the center and life on the walls. In A'Kyria, the lands do not need to be traditional or follow the methods we deem normal to create places of splendor. Some lands might not need a star at all, but maybe a moon heated by a sun when exiting a cavern and brings the heat down with it as it travels. Imagine a weaker, dimmer star that travels through a channel with all the life existing upon the surface of the cavern. The

sun sets when it rises above the surface, leaving the cavern in darkness. There are lands in permanent twilight from suns that barely rise above the surface, as well as, others that remain fixed giving constant daylight and burned lands where the suns are too close together. There are frozen wastes and oceans that stretch to the edges of forever; lands of strange beliefs, alien, bizarre or comforting in its familiarity. It is a land of infinite possibilities, where magic and technology, peasant and space ranger can meet just as easily as neighbors taking out the trash. It is a world where the only limits are the limits you place on yourself. Welcome to A'Kyria.
