**The Social Life of Maps in America, 1750-1860** Martin Brückner, 2017-10-26 In the age of MapQuest and GPS, we take cartographic literacy for granted. We should not; the ability to find meaning in maps is the fruit of a long process of exposure and instruction. A carto-coded America--a nation in which maps are pervasive and meaningful--had to be created. The Social Life of Maps tracks American cartography's spectacular rise to its unprecedented cultural influence. Between 1750 and 1860, maps did more than communicate geographic information and political pretensions. They became affordable and intelligible to ordinary American men and women looking for their place in the world. School maps quickly entered classrooms, where they shaped reading and other cognitive exercises; giant maps drew attention in public spaces; miniature maps helped Americans chart personal experiences. In short, maps were uniquely social objects whose visual and material expressions affected commercial practices and graphic arts, theatrical performances and the communication of emotions. This lavishly illustrated study follows popular maps from their points of creation to shops and galleries, schoolrooms and coat pockets, parlors and bookbindings. Between the decades leading up to the Revolutionary War and the Civil War, early Americans bonded with maps; Martin Brückner's comprehensive history of quotidian cartographic encounters is the first to show us how.

**Your Family Reunion** George G. Morgan, 2001 This book is a guide for organizing a successful and exciting family reunion, from a casual backyard barbecue to a week-long deluxe cruise. No matter whether this is your first family reunion or your tenth, the keys to a successful event are to plan and organize a structure for it, get the people together, and provide opportunities for a variety of memory-making activities. Among the topics covered are getting started with the organization process, determining how to finance the event and work with vendors, deciding where and when to hold it, and creating a simple and effective record keeping system.

Chaotic Dynamics in Two-dimensional Noninvertible Maps C. Mira, 1996 This book is essentially devoted to complex properties (Phase plane structure and bifurcations) of two-dimensional noninvertible maps, i.e. maps having either a non-unique inverse, or no real inverse, according to the plane point. They constitute models of sets of discrete dynamical systems encountered in Engineering (Control, Signal Processing, Electronics), Physics, Economics, Life Sciences.

Compared to the studies made in the one-dimensional case, the two-dimensional situation remained a long time in an underdeveloped state. It is only since these last years that the interest for this research has increased. Therefore the book purpose is to give a global presentation of a matter, available till now only in a partial form. Fundamental notions and tools (such as "critical manifolds"), as the most part of results, are accompanied by many examples and figures.
