Ground Penetrating Radar for Evaluating Subsurface Conditions for Transportation Facilities Rexford M. Morey,1998 This synthesis will be of interest to state Department of Transportation (DOT) geotechnical, bridge, and pavement engineers, engineering geologists, consultants involved with ground penetrating radar (GPR) investigations for state DOTs, and researchers. It describes the current state of the practice of using GPR for evaluating subsurface conditions for transportation facilities. This was accomplished by conducting a literature search and review and an extensive survey of U.S. and Canadian transportation agencies and practitioners, as well as limited international information collection. GPR is a noninvasive nondestructive tool used in transportation applications such as evaluation and characterization of pavement systems, soils, and environmental problems. This report of the Transportation Research Board presents information on the principles, equipment, logistics, applications, and limitations of GPR pertaining to transportation applications. Selected case studies for which ground truth information is available are presented. In addition, an extensive bibliography and glossary are provided as well as appending information about GPR manufacturers from their literature.

Low-angle Radar Land Clutter J. Barrie Billingsley,2002 In this unique book, Billingsley solves the problem of radar land clutter by showing the reader how to design and predict the performance of radars that operate in situations where echoes from the earth's surface interfere with radar target echoes.

**Preventive Maintenance Technology for Asphalt Pavement** Feng Li,Jinyan Feng,Youxin Li,Siqi Zhou,2020-06-25 This book provides an overview of asphalt pavement maintenance, highlighting the key asphalt pavement maintenance technologies in China. It analyzes the trend toward preventive maintenance technologies and proposes technical guidelines and implementation rules for preventive maintenance. **Intelligent Information Processing IX** Zhongzhi Shi,Eunika Mercier-Laurent,Jiuyong Li,2018-10-10 This book constitutes the refereed proceedings of the 10th IFIP TC 12 International Conference on Intelligent Information Processing, IIP 2018, held in Nanning, China, in October 2018. The 37 full papers and 8 short papers presented were carefully reviewed and selected from 80 submissions. They are organized in topical sections on machine learning, deep learning, multi-agent systems, neural computing and swarm intelligence, natural language processing, recommendation systems, social computing, business intelligence and security, pattern recognition, and image understanding.

Managing Speed ,1998 TRB Special Report 254 - Managing Speed: Review of Current Practices for Setting and Enforcing Speed Limits reviews practices for setting and enforcing speed limits on all types of roads and provides guidance to state and local governments on appropriate methods of setting speed limits and related enforcement strategies. Following an executive summary, the report is presented in six chapters and five appendices.

*Portable Calibrator for Across-the-road Radar Systems* Arthur R. Ondrejka,Robert T. Johnk,1998 The calibrator provides simulated radar reflections with a choice of target signatures, such as automobile, truck, small vehicle like a motorcycle, and several trucks in close proximity, to test those radars that have the ability to distinguish these targets. The calibrator can also simulate a vehicle approaching or receding from the radar in order to evaluate the radar's effectiveness in differentiating the direction of target motion. This paper describes an inexpensive, easy-to-use electronic calibrator that can be used to improve the credibility of across-the-road type radars. Such a device can detect actual failures that generate erroneous speed readings. Regular documented use of the calibrator can greatly facilitate the maintenance of across-the-road systems by indicating faulty readings and trends in the radar operation, indicative of imminent failure. A precision calibrator is necessary to determine that the radar instrumentation is operating properly and that the computer algorithm results in displaying the correct speed.

*Ground Penetrating Radar Theory and Applications* Harry M. Jol,2008-12-08 Ground-penetrating radar (GPR) is a rapidly developing field that has seen tremendous progress over the past 15 years. The development of GPR spans aspects of geophysical science, technology, and a wide range of scientific and engineering applications. It is the breadth of applications that has made GPR such a valuable tool in the geophysical consulting and geotechnical engineering industries, has lead to its rapid development, and inspired new areas of research in academia. The topic of GPR has gone from not even being mentioned in geophysical texts ten years ago to being the focus of hundreds of research papers and special issues of journals dedicated to the topic. The explosion of primary literature devoted to GPR technology, theory and applications, has lead to a strong demand for an up-to-date synthesis and overview of this rapidly developing field. Because there are specifics in the utilization of GPR for different applications, a review of the current state of development of the applications along with the fundamental theory is required. This book will provide sufficient detail to allow both practitioners and newcomers to the area of GPR to use it as a handbook and primary research reference. \*Review of GPR theory and applications by leaders in the field \*Up-to-date information and references \*Effective handbook and primary research reference for both experienced practitioners and newcomers

Blockchain and Applications, 5th International Congress José Manuel Machado,Javier Prieto,Paulo Vieira,Hugo Peixoto,António Abelha,David Arroyo,Luigi Vigneri,2023-12-21 This book constitutes the refereed proceedings of the 5th International Congress on Blockchain and Applications 2023, BLOCKCHAIN'23, held in Guimarães, Portugal, in July 2023. Among the scientific community, blockchain and artificial intelligence are a promising combination that will transform the production and manufacturing industry, media, finance, insurance, e-government, etc. Nevertheless, there is no consensus with schemes or best practices that would specify how blockchain and artificial intelligence should be used together. The full papers presented in the main track were carefully reviewed. They contain the latest advances on blockchain and artificial intelligence and on their application domains, exploring innovative ideas, guidelines, theories, models, technologies, and tools and identifying critical issues and challenges that researchers and practitioners must deal with in the future research. The authors would like to thank all the contributing authors, the members of the Program Committees, the sponsors, and the Organizing Committee of the University of Minho and the University of Salamanca for their hard and highly valuable work.
