The New Scramble for Africa Pádraig Carmody,2013-04-26 Once marginalized in the world economy, the past decade has seen Africa emerge as a major global supplier of crucial raw materials like oil, uranium and coltan. With its share of world trade and investment now rising and the availability of natural resources falling, the continent finds itself at the centre of a battle to gain access to and control of its valuable natural assets. China's role in Africa has loomed particularly large in recent years, but there is now a new scramble taking place involving a wider range of established and emerging economic powers from the EU and US to Japan, Brazil and Russia. This book explores the nature of resource and market competition in Africa and the strategies adopted by the different actors involved - be they world powers or small companies. Focusing on key commodities, the book examines the dynamics of the new scramble and the impact of current investment and competition on people, the environment, and political and economic development on the continent. New theories, particularly the idea of Chinese flexigemony are developed to explain how resources and markets are accessed. While resource access is often the primary motive for increased engagement, the continent also offers a growing market for low-priced goods from Asia and Asian-owned companies. Individual chapters explore old and new economic power interests in Africa; oil, minerals, timber, biofuels, food and fisheries; and the nature and impacts of Asian investment in manufacturing and other sectors. *The New Scramble for Africa* will be essential reading for students of African studies, international relations, and resource politics as well as anyone interested in current affairs.

The Scramble for the Poles Klaus Dodds,Mark Nuttall,2016-01-11 In August 2007 a Russian flag was planted under the North Pole during a scientific expedition triggering speculation about a new scramble for resources beneath the thawing ice. But is there really a global grab for Polar territory and resources? Or are these activities vastly exaggerated? In this rich and wide-ranging book, Klaus Dodds and Mark Nuttall look behind the headlines and hyperbole to reveal a complex picture of the so-called scramble for the poles. Whilst anxieties over the potential for conflict and the destruction of what is often perceived as the world's last wildernesses have come to dominate Polar debates and are, to some extent, justified, their study also highlights longer historical and geographical patterns and processes of human activity in these remote territories. Over the past century, Polar landscapes have been probed, drilled, fished, tested on and dug up, as their indigenous populations have struggled to protect their rights and interests. No longer remote places, or themselves 'poles apart' from one another, the contemporary geopolitics of the Polar regions has lessons for us all as we confront a warming world where access to resources is a concern for states, big and small.
