*Flip the Script* Christian P. Acker, 2013 Distinctive hand style lettering is an essential skill for artists and designers. Within the pages of *FLIP THE SCRIPT*, the best hand styles are analysed, contextualising the work of graffiti writers from around America. Author Acker presents the various lettering samples in a clean organized format, giving the material a proper, formal treatment evoking classic typography books.

**Font Technology** Peter Karow, 2012-12-06 Computers have changed typography and prepress as well as printing. Typefaces are manufactured by digital punch cutters with a PC, not any more by punch cutters. Typefaces are constructed an output by a new technology, the so-called fonttechnology. The book by Peter Karow covers the whole area of it. It offers various chapters about (among others) issues like intelligent font scaling, kerning, quality of type, legibility, and problems of different output devices. It is interesting to read about Gutenberg setting, the font market, optical scaling, and last but not least a hand on Kanjhi, the Chinese/Japanese Glyphs.

Furthermore, Fonttechnology contains a number of valuable and instructive appendices. Almost everything one has to know about type and computers!

**1,000 Type Treatments** Wilson Harvey,2008-09-01 New miniature version! The ability to wield typography is one of those things that is a clear indication of a talented designer. Being able to craft type well and thoughtfully takes a deep understanding of the inherent complexities and a keen eye for the minute and subtle details. This book contains a collection of 1,000 instances of thoughtful type usage along with credits that note what fonts were used in the design. Like its predecessor, 1,000 Graphic Elements, the photography in this book focuses in on the typography so readers can get an up-close look at the work. 1,000 Type Treatments showcases an array of fonts in a catalog-like format, making it easy for the working designer to practically shop for ideas. The book is organized by style so if a designer has a traditional, elegant, or edgy piece, they can go directly to that section of the book, where they will find a wide collection of fresh ideas in the style they are seeking. Also included is a directory of font foundries and suppliers, providing busy designers with a quick reference guide to where they can find the fonts that pique their interest.

**How to Make Maps** Peter Anthamatten,2020-12-27 The goal of How to Make Maps is to equip readers with the foundational knowledge of concepts they need to conceive, design, and produce maps in a legible, clear, and coherent manner, drawing from both classical and modern theory in cartography. This book is appropriate for graduate and undergraduate students who are beginning a course of study in geospatial sciences or who wish to begin producing their own maps. While the book assumes no a priori knowledge or experience with geospatial software, it may also serve GIS analysts and technicians who wish to explore the principles of cartographic design. The first part of the book explores the key decisions behind every map, with the aim of providing the reader with a solid foundation in fundamental cartography concepts. Chapters 1 through 3 review foundational mapping concepts and some of the decisions that are a part of every map. This is followed by a discussion of the guiding principles of cartographic design in Chapter 4--how to start thinking about putting a map together in an effective and legible form. Chapter 5 covers map projections, the process of converting the curved earth's surface into a flat representation appropriate for mapping. Chapters 6 and 7 discuss the use of text and color, respectively. Chapter 8 reviews trends in modern cartography to summarize some of the ways the discipline is changing due to new forms of cartographic media that include 3D representations, animated cartography, and mobile cartography. Chapter 9 provides a literature review of the scholarship in cartography. The final component of the book shifts to applied, technical concepts important to cartographic production, covering data quality concepts and the acquisition of geospatial data sources (Chapter 10), and an overview of software applications particularly relevant to modern cartography production: GIS and graphics software (Chapter 11). Chapter 12 concludes the book with examples of real-world cartography projects, discussing the planning, data collection, and design process that lead to the final map products. This book aspires to introduce readers to the foundational concepts--both theoretical and applied--they need to start the actual work of making maps. The accompanying website offers hands-on exercises to guide readers through the production of a map--from conception through to the final version--as well as PowerPoint slides that accompany the text.

**A Study of Chinese Characters** Wang Guiyuan,2023-12-22 As the first volume of a two-volume set on Chinese ancient characters and newly unearthed literature, this book brings together the author's research articles that discuss the development of Chinese characters and the tradition of Chinese palaeography. The 23 chapters in this book focus on two aspects of Chinese characters. The first 13 chapters centre on the evolution of Chinese characters, analysing the composition system and its transformation, the motivation, and mechanisms behind its evolution, as well as the methodology of the study of ancient characters. The subsequent 10 chapters mainly revolve around Shuowen Jiezi, one of the oldest character dictionaries in China. The author offers a novel understanding of the core issues related to this most important philological work, such as the version of the dictionary, misunderstandings in previous scholarship, and its relations with other palaeographical materials. The title will appeal to students and scholars of Sinology, Chinese philology, and palaeography, as well as Chinese characters.
