**Through the Looking Glass** Akhilesh Tilotia, 1901 We all desire to see change and progress in our world. A safer, better future for our children. Yet, the agents of change often appear distant and removed. The politicians and bureaucrats seem to live in a world away from the concerns of the common man, the working professional, the farmer, the daily wage earner. Their actions and statements do not quite seem to mirror the lives, opinions or needs of all their constituents. However, such a perception is flawed. To understand the workings of the world of the public servant, its perspectives and challenges, we must necessarily break free of our own comfort zone and cocoon of conditioned ideas. Through the Looking Glass, written from the unique perspective of an outsider who became an insider, gives the reader a ringside view into the corridors of power – the pulls and pressures, the challenges and excitement, the power and constraints. Narrated with clear-eyed logic, the author, a banking professional inducted into a bureaucrat world, traverses the challenge strewn path from bemused bewilderment to holistic understanding of the workings of a vast nation in the throes of change. Understanding the System is the first step to executing change. And the System is vast, complex, and set in its own momentum. Change requires tremendous power. Yet that power lies in our hands – to build pathways and play active roles in the making of India. To be the change you wish to see.

**Data Mining Mobile Devices** Jesus Mena, 2016-04-19 With today's consumers spending more time on their mobiles than on their PCs, new methods of empirical stochastic modeling have emerged that can provide marketers with detailed information about the products, content, and services their customers desire. Data Mining Mobile Devices defines the collection of machine-sensed environmental data pertaining to human social behavior. It explains how the integration of data mining and machine learning can enable the modeling of conversation context, proximity sensing, and geospatial location throughout large communities of mobile users. Examines the construction and leveraging of mobile sites Describes how to use mobile apps to gather key data about consumers' behavior and preferences Discusses mobile mobs, which can be differentiated as distinct marketplaces—including Apple®, Google®, Facebook®, Amazon®, and Twitter® Provides detailed coverage of mobile analytics via clustering, text, and classification AI software and techniques Mobile devices serve as detailed diaries of a person, continuously and intimately broadcasting where, how, when, and what products, services, and content your consumers desire. The future is mobile—data mining starts and stops in consumers' pockets. Describing how to analyze Wi-Fi and GPS data from websites and apps, the book explains how to model mined data through the use of artificial intelligence software. It also discusses the monetization of mobile devices' desires and preferences that can lead to the triangulated marketing of content, products, or services to billions of consumers—in a

relevant, anonymous, and personal manner.

**Look Who's Watching** Fen Osler Hampson, Eric Jardine, 2016-10-17 The Internet ecosystem is held together by a surprisingly intangible glue – trust. To meet its full potential, users need to trust that the Internet works reliably and efficiently when providing them with the information they are seeking, while also being secure, private and safe. When trust in the Internet wanes, the network's stock of "digital social capital" falls and users begin to alter their online behaviour. These often subtle changes in behaviour tend to be collectively highly maladaptive, hindering the economic, developmental and innovative potential of the globe-spanning network of networks. *Look Who's Watching: Surveillance, Treachery and Trust Online* confirms in vivid detail that the trust placed by users in the Internet is increasingly misplaced. Edward Snowden's revelations that the United States National Security Agency and other government agencies are spying on Internet users, the proliferation of cybercrime and the growing commodification of user data and regulatory changes – which threaten to fragment the system – are all rapidly eroding the confidence users have in the Internet ecosystem. Based on a combination of illustrative anecdotal evidence and analysis of new survey data, *Look Who's Watching* clearly demonstrates why trust matters, how it is being eroded and how, with care and deliberate policy action, the essential glue of the Internet can be restored.
