Bone Swans C.S.E. Cooney, 2015-07-01 Winner of the 2016 World Fantasy Award for Best Collection Contains The Bone Swans of Amandale, 2015 Nebula Award finalist for Best Novella C. S. E. Cooney is one of the most moving, daring, and plainly beautiful voices to come out of recent fantasy. She's a powerhouse with a wink in her eye and a song in each pocket. -Catherynne M. Valente, New York Times-bestselling author of the Fairyland novels These stories are a pure joy. C. S. E. Cooney's imagination is wild and varied, her stories bawdy, horrific, comic, and moving-frequently all at the same time. Her characters are wickedly appealing, and her language-O! her language. Lush, playful, poetic, but never obscure or stilted, it makes her magic more magic, her comedy more comic, and her tragic moments almost unbearable. -Delia Sherman, author of Young Woman in a Garden: Stories Bone Swans is a joy of feathery bones & ghoulish clowns. I adored every word. Like an eyas cries for meat, I cry for more. C.S.E. Cooney's a major talent and these are major talent stories. Who can resist hero rats, pouting swans, feral children, flying carpets and the Flabberghast? So tongue-tied am I with delight I fall back on the usual cliches: gripping, delightful, insightful, rollicking & lyrical-and yet not one cliché is to be found in Bone Swans, only stories of surpassing delicacy and wit, told by a lady of rare talent. Please, ma'am, might I have some more? -Ysabeau S. Wilce, Andre Norton Award winning author of Flora's Dare A swan princess hunted for her bones, a broken musician and his silver pipe, and a rat named Maurice bring justice to a town under fell enchantment. A gang of courageous kids confronts both a plague-destroyed world and an afterlife infested with clowns but robbed of laughter. In an island city, the murder of a child unites two lovers, but vengeance will part them. Only human sacrifice will save a city trapped in ice and darkness. Gold spun out of straw has a price, but not the one you expect. World Fantasy Award winner Ellen Kushner has called Cooney's writing stunningly delicious! Cruel, beautiful and irresistible. Bone Swans, the infernally whimsical debut collection from C. S. E. Cooney, gathers five novellas that in the words of Andre Norton Award winner Delia Sherman are bawdy, horrific, comic, and moving-frequently all at the same time. Cooney's mentor, Science Fiction and Fantasy Writers of America Grand Master Gene Wolfe, proclaims in his introduction that her style is so original it can only be described as pure Cooney, and he offers readers a challenge: Try to define that when you've finished the stories in this book. More praise for Bone Swans Cooney's brilliantly executed collection of five stories is a delicious stew of science fiction, horror, and fantasy, marked by unforgettable characters who plumb the depths of pathos and triumph. ... All of these stories could easily serve as the foundation for novels while also working beautifully at their current length. These well-crafted narratives defiantly refuse to fade from memory long after the last word has been read. -Publishers Weekly, starred review In five beautifully crafted stories, Cooney builds imaginary worlds full of flying carpets, fairy-tale characters, and children confronted with a postapocalyptic Earth ... Each tale packs in enough plot for a novel, with adventurous characters who brim with wit. -Library Journal, starred review Writing without ostentation and featuring characters who may be flippant, terse, or even tongue-tied, Cooney produces memorable prose propelled by extraordinary ideas ... Faced with such twisted genius, I'll say no more! -Locus A fascinating mashup between the tropes and resonances of the mythic tale with the sensibilities of contemporary action-oriented fantasy: simultaneously lighthearted and serious, full of consequences but also ubiquitous happy endings. -Tor.com

Introduction to Multicopter Design and Control Quan Quan, 2017-06-23 This book is the first textbook specially on multicopter systems in the world. It provides a comprehensive overview of multicopter systems, rather than

focusing on a single method or technique. The fifteen chapters are divided into five parts, covering the topics of multicopter design, modeling, state estimation, control, and decision-making. It differs from other books in the field in three major respects: it is basic and practical, offering self-contained content and presenting hands-on methods; it is comprehensive and systematic; and it is timely. It is also closely related to the autopilot that users often employ today and provides insights into the code employed. As such, it offers a valuable resource for anyone interested in multicopters, including students, teachers, researchers, and engineers. This introductory text is a welcome addition to the literature on multicopter design and control, on which the author is an acknowledged authority. The book is directed to advanced undergraduate and beginning graduate students in aeronautical and control (or electrical) engineering, as well as to multicopter designers and hobbyists. ----- Professor W. Murray Wonham, University of Toronto This is the single best introduction to multicopter control. Clear, comprehensive and progressing from basic principles to advanced techniques, it's a must read for anyone hoping to learn how to design flying robots. ----- Chris Anderson, 3D Robotics CEO.

When the god Poseidon tells a man with no memory how to recover his past, the unwitting warrior seeks out the Lady of Pain and finds himself banished to the Mazes. Artificial Intelligence Benedikt Paul Benedikt Paul Goecke, Astrid Rosenthal-von der Pütten, 2020-08 This book discusses the major issues of the current AI debate from the perspectives of philosophy, theology, and the social sciences: Can AI have a consciousness? Is super intelligence possible and probable? How does AI change individual and social life? Can there be artificial persons? What influence does AI have on religious worldviews? In Western societies, we are surrounded by artificially intelligent systems. Most of these systems are embedded in online platforms. But embodiment of AI, be it by voice (Siri, Alexa, Cortana) or by actual physical embodiment (e.g.,

robots) give artificially intelligent systems another dimension in terms of their impact on how we perceive these systems, how they shape our communication with them and with fellow humans and how we live and work together. AI in any form gives a new twist to the big questions that humanity has concerned herself with for centuries: What is consciousness? How should we treat each other – what is right and what is wrong? How do our creations change the world we are living in? Which challenges do we have to face in the future?

Robotics Research Henrik I. Christensen, Oussama Khatib, 2016-09-02 This volume presents a collection of papers presented at the 15th International Symposium of Robotic Research (ISRR). ISRR is the biennial meeting of the International Foundation of Robotic Research (IFRR) and its 15th edition took place in Flagstaff, Arizona on December 9 to December 12, 2011. As for the previous symposia, ISRR 2011 followed up on the successful concept of a mixture of invited contributions and open submissions. Therefore approximately half of the 37 contributions were invited contributions from outstanding researchers selected by the IFRR officers and the program committee, and the other half were chosen among the open submissions after peer review. This selection process resulted in a truly excellent technical program which featured some of the very best of robotic research. The program was organized around oral presentation in a single-track format and included for the first time a small number of interactive presentations. The symposium contributions contained in this volume report on a variety of new robotics research results covering a broad spectrum including perception, manipulation, grasping, vehicles and design, navigation, control and integration, estimation and SLAM.
