How (not) to train the brain Amir Raz, Sheida Rabipour, 2019-04-18 Brain training is all the rage. Commercial and clinical initiatives capitalize on trailblazing interdisciplinary research that spans domains such as education, psychological and brain science, cognitive remediation, and mental health. Promotional materials boast that we can learn to think and

respond faster, focus better, and control our emotions; companies and authors market techniques to boost memory, increase confidence, and overcome cognitive impairments. 'How (not) to Train the Brain' examines the field of cognitive fitness and scrutinizes the scientific evidence in support of brain training techniques. With the potential to affect millions this topic is important for scientists, practitioners, educators, and the general public. While many a consumer often marvels at this highly commercialized field, discerning fact from fad becomes a challenge given the abundance of products, publications, and contexts. Moreover, available products prey on the naivety of individuals unfamiliar with the nuanced field of neuroscience, advertising programs that lack scientific validation or presenting unfounded arguments. In this book, the authors review data from hundreds of articles and provide an overarching account of the field, separating scientific evidence from publicity myth and guiding readers through how they should - and should not - train the brain. They describe existing techniques, including those rooted in scientific research, and survey methods that purport to yield measurable improvements. Intended for a wide audience, this book taps a timely topic by highlighting the most salient approaches to boosting brain function while identifying those that don't seem to work.

Digital Environments Sidney I. Dobrin, 2019-02-01 With the title serving as an umbrella term to distinguish simulated places from real places, Digital Environments signifies a shift in how we think about interactions with places and spaces, both real and simulated. The very idea of digital environments, though, complicates such distinctions, asking simultaneously (and perhaps reductively) as to how agents engage networks, and if there can be such distinctions between virtual and real place, between agents and networks. For ecocritics, the term brings together two concepts that are frequently cast as oppositional: digital standing in for technology/technological and environments often used to represent nature/wilderness. Thus, reading digital environments as technological nature asks us to consider not only the relationships between technologies and natures, but the very idea that there can be such distinctions, or that there might be technological natures and natural technologies. In this way, then, the play of digital/environment exposes complexities in how we

theorize both technology and nature, complexities that often result in the inevitable exclusivity and polarity between the two ideas. The real and the simulated, the technological and the natural, all unfold in flagrant and complex ways that make evident the need for framing technological theories within the gaze of ecocriticism and the need for framing ecocritical theories within technological gazes. This collection considers the possibilities of bringing ecocritical approaches into conversation with digital environments. The intent is to initiate a dialogue between two areas of research often understood as disparate. This book was originally published as a special issue of *Green Letters: Studies in Ecocriticism*.

The Zones of Regulation Leah M. Kuypers, 2011 ... a curriculum geared toward helping students gain skills in consciously regulating their actions, which in turn leads to increased control and problem solving abilities. Using a cognitive behavior approach, the curriculum's learning activities are designed to help students recognize when they are in different states called zones, with each of four zones represented by a different color. In the activities, students also learn how to use strategies or tools to stay in a zone or move from one to another. Students explore calming techniques, cognitive strategies, and sensory supports so they will have a toolbox of methods to use to move between zones. To deepen students' understanding of how to self-regulate, the lessons set out to teach students these skills: how to read others' facial expressions and recognize a broader range of emotions, perspective about how others see and react to their behavior, insight into events that trigger their less regulated states, and when and how to use tools and problem solving skills. The curriculum's learning activities are presented in 18 lessons. To reinforce the concepts being taught, each lesson includes probing questions to discuss and instructions for one or more learning activities. Many lessons offer extension activities and ways to adapt the activity for individual student needs. The curriculum also includes worksheets, other handouts, and visuals to display and share. These can be photocopied from this book or printed from the accompanying CD.--Publisher's website.
