The Earth's Human Carrying Capacity Frederic R. Siegel,2021-08-02 This book focuses on the Earth's carrying capacity to service the needs of its human populations as well as preserve the ecosystems that provide natural resources that sustain life and support human activities in 2020 and later in the century (2050 and beyond). It addresses the two principal factors that challenge the limits of the carrying capacity: growing populations/demographic moves and global warming/climate change. It also covers the effects that these factors have on water availability, food security, sanitation and natural resources. The status of these basic needs that sustain life and societal activities with respect to population increases and global warming driven climate changes are discussed on two time frames. One with respect to the 2020 and the other with measured and computer guided projected future impacts later as the century progresses to 2050 and later, Attention is given to Africa, Asia, and somewhat for South America because of their projected

increases in population. The purpose of the book is to provide those in decision-making roles and those that advise them with a sound set of facts and figures to think about to support their decisions/actions. A secondary purpose is to present data that stresses the need to act now, firmly and with investment to plan to adapt to changing conditions rather than wait until forced to do so. The book also discusses how the COVID-19 pandemic has affected the world's societies and how they have reacted. The book will be of use to students in first/second year of college/university programs in Environmental Sciences/Studies, demographics, and ancillary fields such as agriculture science, urban/land use planners, political science, public health, and consultants at academic and professional levels.

Theory and Engineering of Dependable Computer Systems and Networks Wojciech Zamojski,Jacek Mazurkiewicz,Jarosław Sugier,Tomasz Walkowiak,Janusz Kacprzyk,2021-05-26 This book contains papers on selected aspects of dependability analysis in computer systems and networks, which were chosen for discussion during the 16th DepCoS-RELCOMEX conference held in Wrocław, Poland, from June 28 to July 2, 2021. Their collection will be a valuable source material for scientists, researchers, practitioners and students who are dealing with design, analysis and engineering of computer systems and networks and must ensure their dependable operation. Being probably the most complex technical systems ever engineered by man (and also—the most dynamically evolving ones), organization of contemporary computer systems cannot be interpreted only as structures built on

the basis of (unreliable) technical resources. Their evaluation must take into account a specific blend of interacting people (their needs and behaviours), networks (together with mobile properties, cloud organization, Internet of Everything, etc.) and a large number of users dispersed geographically and constantly producing an unconceivable number of applications. Ever-growing number of research methods being continuously developed for dependability analyses apply the newest techniques of artificial and computational intelligence. Selection of papers in these proceedings illustrates diversity of multidisciplinary topics which are considered in present-day dependability explorations.

Breath of Dragons Tina M. Randolph, 2014-09-24 It is 3088 in a world divided into four leagues of dragons, the vilest being Zealian who hungers to rule them all. Now a Drakon Master of the peaceful Aurian League has vanished. No one knows who kidnapped Aldaina Numara, who has the inherited power to control dragon's Air-breath. As the rumble of war spreads on the planet of Marquee Viridian, the Dragon Breaths Corporation declares itself as reigning governor of all leagues in an effort to bind the powers of fire, water, air, and ice. In an attempt to find his older sister, Aldaina, seventeen-year-old Aurian Drakon Master, Jett Trace, embarks on a journey to the far reaches of the north, where she has supposedly ventured to help the league form an alliance with the ice-breathing Crystallians. With cryptic clues to guide him, Jett begins to piece together a

complex puzzle that includes missing airships, a foreboding feeling, and rumors of a secret operation. As the Zealian League continues on a destructive path toward a tyrannical reign, Jett soon realizes that the Neptunian's Water-breath may be the only thing that can change the game plan in an epic battle for supremacy.
