Aleksandar Rodić, Theodor Borangiu

Advances in Robot Design and Intelligent Control Aleksandar Rodić, Theodor Borangiu, 2016-11-26 This book presents the proceedings of the 25th International Conference on Robotics in Alpe-Adria-Danube Region, RAAD 2016 held in Belgrade, Serbia, on June 30th–July 2nd, 2016. In keeping with the tradition of the event, RAAD 2016 covered all the important areas of research and innovation in new robot designs and intelligent robot control, with papers including Intelligent robot motion control; Robot vision and sensory processing; Novel design of robot manipulators and grippers; Robot applications in manufacturing and services; Autonomous systems, humanoid and walking robots; Human–robot interaction and collaboration; Cognitive robots and emotional intelligence; Medical, human-assistive robots and prosthetic design; Robots in construction and arts, and Evolution, education, legal and social issues of robotics. For the first time in RAAD history, the themes cloud robots, legal and ethical issues in robotics as well as robots in arts were included in the technical program. The book is a valuable resource for researchers in fields of robotics, engineers who implement robotic solutions in manufacturing, services and healthcare, and master’s and Ph.D. students working on robotics

projects.

Advances in Low-Level Color Image Processing M. Emre Celebi, Bogdan Smolka, 2013-12-17 Color perception plays an important role in object recognition and scene understanding both for humans and intelligent vision systems. Recent advances in digital color imaging and computer hardware technology have led to an explosion in the use of color images in a variety of applications including medical imaging, content-based image retrieval, biometrics, watermarking, digital inpainting, remote sensing, visual quality inspection, among many others. As a result, automated processing and analysis of color images has become an active area of research, to which the large number of publications of the past two decades bears witness. The multivariate nature of color image data presents new challenges for researchers and practitioners as the numerous methods developed for single channel images are often not directly applicable to multichannel ones. The goal of this volume is to summarize the state-of-the-art in the early stages of the color image processing pipeline.

Computer Analysis of Images and Patterns Xiaoyi Jiang, Nicolai Petkov, 2009-08-28 This book constitutes the refereed proceedings of the biennially held International Conference on Computer Analysis

of Images and Patterns, CAIP 2009, which took place in Münster, Germany, September 2-4, 2009. The 148 papers presented together with 2 invited talks were carefully reviewed and selected from 405 submissions. The papers are organized in topical sections on: biometrics, calibration, document analysis, features, graph representations, image processing, image registration, image and video retrieval, medical imaging, object and scene recognition, pattern recognition, shape recovery, segmentation, stereo and video analysis, texture analysis, and applications.

Smaller C Marc Loy, 2021-05-27 For makers looking to use the smallest microcontrollers or to wring the highest performance out of larger ones, the C language is still the best option. This practical book provides a solid grounding in C basics for anyone who tinkers with programming microcontrollers. You'll explore the many ways C enables developers and makers to get big results out of tiny devices. Author Marc Loy shows you how to write clean, maintainable C code from scratch. This language and its cousin, C++, are still widely used to write low-level code for device drivers or operating systems. By understanding C syntax and its quirks, you'll gain an enduring computer language literacy that will help you pick up new languages and styles more easily. Learn C

fundamentals, such as data types, flow control, and functions
Explore memory management including how programs work on
small devices Understand answers provided in online forums such
as Reddit or Stack Overflow Write efficient, custom C code that's
both readable and maintainable Analyze the performance of your
code and weigh optimizations Evaluate third-party libraries for use

Dynamic and Precise Engineering Surveying Qingquan

Li, 2023-10-16 Driven by the increasingly expanding needs of
infrastructure construction, operation and maintenance, as well as
the rapid developments of intelligent sensing and information
technology, precise engineering surveying has been transformed
from static, discrete, and manual into dynamic, continuous, and
intelligent ways. This transformation leads to an advanced
multidisciplinary field, dynamic and precise engineering surveying,
on which the author has worked for over two decades. This book
systematically summarizes the fundamentals, methods, and
applications in dynamic and precise engineering surveying. The
contents mainly include two parts: the first part introduces
principles and methods of dynamic and precise engineering
surveying; the second part presents representative applications in

which innovative methods and advanced equipment are applied in the construction, operation and maintenance of mega and complex infrastructures. Readers engaged in surveying and mapping, civil engineering, water conservancy engineering, railway engineering, electronic information, and computer science, including undergraduates, graduates, researchers and engineers, will find it an informative reference.

Book of Names John Peel,2004 Score, Renald, and Pixel are snatched from different worlds and taken by Bestials to the planet Treen, where they are to be offered as a sacrifice.

Learn Robotics with Raspberry Pi Matt Timmons-Brown,2019-01-22 In Learn Robotics with Raspberry Pi, you'll learn how to build and code your own robot projects with just the Raspberry Pi microcomputer and a few easy-to-get components - no prior experience necessary! Learn Robotics with Raspberry Pi will take you from inexperienced maker to robot builder. You'll start off building a two-wheeled robot powered by a Raspberry Pi minicomputer and then program it using Python, the world's most popular programming language. Gradually, you'll improve your robot by adding increasingly advanced functionality until it can follow lines, avoid obstacles, and even recognize objects of a

certain size and color using computer vision. Learn how to: -
Control your robot remotely using only a Wii remote - Teach your robot to use sensors to avoid obstacles - Program your robot to follow a line autonomously - Customize your robot with LEDs and speakers to make it light up and play sounds - See what your robot sees with a Pi Camera As you work through the book, you'll learn fundamental electronics skills like how to wire up parts, use resistors and regulators, and determine how much power your robot needs. By the end, you'll have learned the basics of coding in Python and know enough about working with hardware like LEDs, motors, and sensors to expand your creations beyond simple robots.

Hierarchical Perceptual Grouping for Object Recognition Eckart Michaelsen, Jochen Meidow, 2019-01-01 This unique text/reference presents a unified approach to the formulation of Gestalt laws for perceptual grouping, and the construction of nested hierarchies by aggregation utilizing these laws. The book also describes the extraction of such constructions from noisy images showing man-made objects and clutter. Each Gestalt operation is introduced in a separate, self-contained chapter, together with application examples and a brief literature review. These are then brought

together in an algebraic closure chapter, followed by chapters that connect the method to the data – i.e., the extraction of primitives from images, cooperation with machine-readable knowledge, and cooperation with machine learning. Topics and features: offers the first unified approach to nested hierarchical perceptual grouping; presents a review of all relevant Gestalt laws in a single source; covers reflection symmetry, frieze symmetry, rotational symmetry, parallelism and rectangular settings, contour prolongation, and lattices; describes the problem from all theoretical viewpoints, including syntactic, probabilistic, and algebraic perspectives; discusses issues important to practical application, such as primitive extraction and any-time search; provides an appendix detailing a general adjustment model with constraints. This work offers new insights and proposes novel methods to advance the field of machine vision, which will be of great benefit to students, researchers, and engineers active in this area.

Parallel Algorithms for Irregularly Structured Problems Afonso Ferreira, 1996-07-30 This book constitutes the refereed proceedings of the Third International Workshop on Parallel Algorithms for Irregularly Structured Problems, IRREGULAR '96, held in Santa Barbara, California, in August 1996. The volume presents 28

revised full papers selected from 51 submissions; also included are one full invited paper by Torben Hagerup and abstracts of four other invited talks. The papers are organized in topical sections on sparse matrix problems, partitioning and domain composition, irregular applications, communication and synchronization, systems support, and mapping and load balancing.

Principles of Computer Graphics Shalini Govil-Pai, 2006-08-02

Helps readers to develop their own professional quality computer graphics. Hands-on examples developed in OpenGL illustrate key concepts.

Computer Analysis of Images and Patterns Wojciech J. Radecki, 2001-08-22

This book constitutes the refereed proceedings of the 9th International Conference on Computer Analysis of Images and Patterns, CAIP 2001, held in Warsaw, Poland in September 2001. The 88 revised papers presented were carefully reviewed and selected from numerous submissions. The book offers topical sections on image indexing, image compression, pattern recognition, medical image processing, motion analysis, augmented reality, industrial applications in various fields, image analysis, and computer vision.

New Contributions in Information Systems and Technologies

Alvaro Rocha, Ana Maria Correia, Sandra Costanzo, Luis Paulo Reis, 2015-03-25 This book contains a selection of articles from The 2015 World Conference on Information Systems and Technologies (WorldCIST'15), held between the 1st and 3rd of April in Funchal, Madeira, Portugal, a global forum for researchers and practitioners to present and discuss recent results and innovations, current trends, professional experiences and challenges of modern Information Systems and Technologies research, technological development and applications. The main topics covered are: Information and Knowledge Management; Organizational Models and Information Systems; Intelligent and Decision Support Systems; Big Data Analytics and Applications; Software Systems, Architectures, Applications and Tools; Multimedia Systems and Applications; Computer Networks, Mobility and Pervasive Systems; Human-Computer Interaction; Health Informatics; Information Technologies in Education; Information Technologies in Radio communications.

Doods Juff Juff, 2019-12-23 This is a search and find book that challenges the reader to find certain characters within the pages of

the book. The book itself is filled with a sea of stick men also known as Doods. Doods is short for Doodle which is exactly how these characters came to life. Juff Juff would doodle these stick characters as a kid until one day he created a page full of them and it was then that the Doods came to be. The Ultimate Challenge however is trying to locate the two identical Doods within the book. They are exactly alike and are identical to the pixel...The only thing is you don't know who they are to begin with so it makes it that much more difficult. This book is super fun and super challenging at the same time. Enjoy and good luck.

dHealth 2020 – Biomedical Informatics for Health and Care

G. Schreier,D. Hayn,A. Eggerth,2020-06-24 Successful digital healthcare depends on the effective flow of a complete chain of information; from the sensor, via multiple steps of processing, to the actuator, which can be anything from a human healthcare professional to a robot. Along this pathway, methods for automating the processing of information, like signal processing, machine learning, predictive analytics and decision support, play an increasing role in providing actionable information and supporting personalized and preventive healthcare concepts in both biomedical and digital healthcare systems and applications. ICT

systems in healthcare and biomedical systems and devices are very closely related, and in the future they will become increasingly intertwined. Indeed, it is already often difficult to delineate where the one ends and the other begins. This book presents the intended proceedings of the dHealth 2020 annual conference on the general topic of health Informatics and digital health, which was due to be held in Vienna, Austria, on 19 and 20 May 2020, but which was cancelled due to the COVID-19 pandemic. The decision was nevertheless taken to publish these proceedings, which include the 40 papers which would have been delivered at the conference. The special topic for the 2020 edition of the conference was Biomedical Informatics for Health and Care. The book provides an overview of current developments in health informatics and digital health, and will be of interest to researchers and healthcare practitioners alike.

Progress in Pattern Recognition, Image Analysis, Computer Vision, and Applications Alvaro Pardo,Josef Kittler,2015-10-24 This book constitutes the refereed proceedings of the 20th Iberoamerican Congress on Pattern Recognition, CIARP 2015, held in Montevideo, Uruguay, in November 2015. The 95 papers presented were carefully reviewed and selected from 185

submissions. The papers are organized in topical sections on applications on pattern recognition; biometrics; computer vision; gesture recognition; image classification and retrieval; image coding, processing and analysis; segmentation, analysis of shape and texture; signals analysis and processing; theory of pattern recognition; video analysis, segmentation and tracking.

Intelligent Autonomous Robotics Peter Settles, 2022-05-31

Robotics technology has recently advanced to the point of being widely accessible for relatively low-budget research, as well as for graduate, undergraduate, and even secondary and primary school education. This lecture provides an example of how to productively use a cutting-edge advanced robotics platform for education and research by providing a detailed case study with the Sony AIBO robot, a vision-based legged robot. The case study used for this lecture is the UT Austin Villa RoboCup Four-Legged Team. This lecture describes both the development process and the technical details of its end result. The main contributions of this lecture are (i) a roadmap for new classes and research groups interested in intelligent autonomous robotics who are starting from scratch with a new robot, and (ii) documentation of the algorithms behind our own approach on the AIBOs with the goal of making them accessible

for use on other vision-based and/or legged robot platforms.

CNPS Proceedings 2017 David de Hilster, 2017-07-07 The John Chappell Natural Philosophy Society (CNPS) provides an open forum for the study, debate, and presentation of serious scientific ideas, theories, philosophies, and experiments that are not commonly accepted in mainstream science. The CNPS uses the term Natural Philosophy in its broader sense which includes physics, cosmology, mathematics, and the philosophy of science. Our goal is to return to the basics where things went wrong and start anew.

Python for Kids, 2nd Edition Jason R. Briggs, 2022-11-15 The second edition of the best-selling Python for Kids—which brings you (and your parents) into the world of programming—has been completely updated to use the latest version of Python, along with tons of new projects! Python is a powerful programming language that’s easy to learn and fun to use! But books about programming in Python can be dull and that’s no fun for anyone. Python for Kids brings kids (and their parents) into the wonderful world of programming. Jason R. Briggs guides you through the basics, experimenting with unique (and hilarious) example programs featuring ravenous monsters, secret agents, thieving ravens, and

more. New terms are defined; code is colored and explained; puzzles stretch the brain and strengthen understanding; and full-color illustrations keep you engaged throughout. By the end of the book, you'll have programmed two games: a clone of the famous Pong, and "Mr. Stick Man Races for the Exit"—a platform game with jumps and animation. This second edition is revised and updated to reflect Python 3 programming practices. There are new puzzles to inspire you and two new appendices to guide you through Python's built-in modules and troubleshooting your code. As you strike out on your programming adventure, you'll learn how to:

- Use fundamental data structures like lists, tuples, and dictionaries
- Organize and reuse your code with functions and modules
- Use control structures like loops and conditional statements
- Draw shapes and patterns with Python's turtle module
- Create games, animations, and other graphical wonders with tkinter

Why should serious adults have all the fun? Python for Kids is your ticket into the amazing world of computer programming. Covers Python 3.x which runs on Windows, macOS, Linux, even Raspberry Pi

Virion's Net Cressida Gillespie, 2017-10-31 Gillespie transports young readers to a captivating fantasy realm with a modern twist.

Virion's Net is an adventure story with a twist of the computer age. This book will appeal to young adult readers and children aged 10 years and over. It will be enjoyed by fans of fantasy fiction and adventure novels, with a heartfelt twist. It combines elements of the real world with a fantasy realm containing unique, imaginative beings such as squelchings and bufferbirds. Twelve-year-old Jack longs to be on the internet. His mother worries about him, especially since his Dad left for Australia ten years previously and is now presumed dead—believed to have been eaten by a crocodile. A wafting apparition magically appears out of the computer and Jack is catapulted to a land where he meets Pixel, the many-armed lone blob. There are squelchings, delightful squirrel-like creatures; and bufferbirds, clever messengers helping to protect the kingdom from the evil of Virion, the fearful she-monster. Jack and his new friends band together to get rid of this monster. They are assisted by Vulcanians, silent, rock-like beings and by the slow, incessant advance of a warming world. It is set in a land of desert, mountains, glaciers, and the forbidding presence of The Wall, a half-mile high construction built by the paranoid Virion. On return to the normality of home, Jack, feeling a changed person, is met with the astonishing news that his father is still alive.

Over all this hangs the question– has his adventure been a dream, or is it real?
