Mavromoustakis, George Mastorakis, Ciprian Dobre, 2016-11-19 This book reports on the latest advances on the theories, practices, standards and strategies that are related to the modern technology paradigms, the Mobile Cloud computing (MCC) and Big Data, as the pillars and their association with the emerging 5G mobile networks. The book includes 15 rigorously refereed chapters written by leading international researchers, providing the readers with technical and scientific information about various aspects of Big Data and Mobile Cloud Computing, from basic concepts to advanced findings, reporting the state-of-the-art on Big Data management. It demonstrates and discusses methods and practices to improve multi-source Big Data manipulation techniques, as well as the integration of resources availability through the 3As (Anywhere, Anything, Anytime) paradigm, using the 5G access technologies.

Governing European Communications Maria Michalis, 2007 Governing European Communications provides a comprehensive and up-to-date account of the emergence, dynamics, and evolution of European-level communications governance in the post-war era, focusing on telecommunications and television policies and regulation, and their technological convergence. Concentrating on the EU, the book embeds governance within broader economic and political developments in a global context and demonstrates that European governance has been more about the character rather than the level of regulation.

The Art of Prolog, second edition Leon S. Sterling, Ehud Y. Shapiro, 1994-03-10 This new edition of The Art of Prolog contains a number of important changes. Most background sections at the end of each chapter have been updated to take account of important recent research results, the references have been greatly expanded, and more advanced exercises have been added which have been used successfully in teaching the course. Part II, The Prolog Language, has been modified to be compatible with the new Prolog standard, and the chapter on program development has been significantly altered: the predicates defined have been moved to more appropriate chapters, the section on efficiency has been moved to the considerably expanded chapter on cuts and negation, and a new section has been added on stepwise enhancement—a systematic way of constructing Prolog programs developed by Leon Sterling. All but one of the chapters in Part III, Advanced Prolog Programming Techniques, have been substantially changed, with some major rearrangements. A new chapter on interpreters describes a rule language and interpreter for expert systems, which better illustrates how Prolog should be used to construct expert systems. The chapter on program transformation is completely new and the chapter on logic grammars adds new material for recognizing simple languages, showing how grammars apply to more computer science examples.

Many Kingdoms Elizabeth Garver Jordan,1908 At the beginning of her breakdown the intervals between intelligent consciousness and insanity had been long. She was herself, or was able to keep herself fairly in hand, the greater part of the time, and chaos, when it came, lasted only for a few days or weeks. Recently this condition had been reversed. She had lost knowledge of time, but she felt that centuries must have passed since those last flying, blessed hours when she knew herself at least for what she was. She grasped now at her returning reason, with a desperate, shuddering little moan, which she quickly stifled.
