Privacy-Preserving in Mobile Crowdsensing Chuan Zhang,Tong Wu,Youqi Li,Liehuang Zhu,2023-03-24 Mobile crowdsensing is a new sensing paradigm that utilizes the intelligence of a crowd of individuals to collect data for mobile purposes by using their portable devices, such as smartphones and wearable devices. Commonly, individuals are incentivized to collect data to fulfill a crowdsensing task released by a data requester. This "sensing as a service" elaborates our knowledge of the physical world by opening up a new door of data collection and analysis. However, with the expansion of mobile crowdsensing, privacy issues urgently need to be solved. In this book, we discuss the research background and current research process of privacy protection in mobile crowdsensing. In the first chapter, the background, system model, and threat model of mobile crowdsensing are introduced. The second chapter discusses the current techniques to protect user privacy in mobile crowdsensing. Chapter three introduces the privacy-preserving content-based task allocation scheme. Chapter four further introduces the privacy-preserving location-based task scheme. Chapter five presents the scheme of privacy-preserving truth discovery with truth transparency. Chapter six proposes the scheme of privacy-preserving truth discovery with truth hiding. Chapter seven summarizes this monograph and proposes future research directions. In summary, this book introduces the following techniques in mobile crowdsensing: 1) describe a randomizable matrix-based task-matching method to protect task privacy and enable secure content-based task allocation; 2) describe a multi-clouds randomizable matrix-based task-matching method to protect location privacy and enable secure arbitrary range queries; and 3) describe privacy-preserving truth discovery methods to support efficient and secure truth discovery. These techniques are vital to the rapid development of privacy-preserving in mobile crowdsensing.

The Stone Loves the World Brian Hall, 2022-06-14 A warm, inventive, and multilayered novel about two families - one made up largely of scientists, and the other of artists and mystics - whose worlds collide in pursuit of a lost daughter Mette, a twenty-year old programmer of visual effects for video games, lives with her mother, Saskia, an aspiring playwright, in Brooklyn. Mette is a private and socially awkward young woman, who finds something consoling in repetitive mathematical calculations. But she has been recently rejected in love, and feels stuck in an endless loop, no longer certain of her place in the world. As Brian Hall's new novel opens, Mette has gone missing. Her disappearance forces Saskia to reunite with Mette's father, Mark, an emotionally distant astronomy professor in Ithaca, to embark on a journey together to find her. Mette's path will take her across America and then to a fateful visit with her charismatic grandfather, Thomas, who formerly ran the commune north of Ithaca where Saskia was raised, and who now lives as a hermit in a windmill on a remote Danish island. Playing out over nine decades and three generations, and stitching together a dazzling array of subjects—from cosmology and classical music to number theory and medieval mystery plays—The Stone Loves the World is a story of love, longing, and scientific wonder. It offers a moving reflection on the human search for truth, meaning, and connection in an often incomprehensible universe, and on the genuine surprises that the real world, and human society, can offer.

Mobile Data Mining Yuan Yao, Xing Su, Hanghang Tong, 2018-10-31 This SpringerBrief presents a typical life-cycle of mobile data mining applications, including: data capturing and processing which determines what data to collect, how to collect these data, and how to reduce the noise in the data based on smartphone sensors feature engineering which extracts and selects features to serve as the input of algorithms based on the collected and processed data model and algorithm design In particular, this brief concentrates on the model and algorithm design aspect, and explains three challenging requirements of mobile data mining applications: energy-saving, personalization, and real-time Energy saving is a fundamental requirement of mobile applications, due to the limited battery capacity of smartphones. The authors explore the existing practices in the methodology level (e.g. by designing hierarchical models) for saving energy. Another fundamental requirement of mobile

applications is personalization. Most of the existing methods tend to train generic models for all users, but the authors provide existing personalized treatments for mobile applications, as the behaviors may differ greatly from one user to another in many mobile applications. The third requirement is real-time. That is, the mobile application should return responses in a real-time manner, meanwhile balancing effectiveness and efficiency. This SpringerBrief targets data mining and machine learning researchers and practitioners working in these related fields. Advanced level students studying computer science and electrical engineering will also find this brief useful as a study guide.

The future of PR and influence, when (or if) to launch a new business as opposed to a division, raising capital, the impact of presentations, startup school fees, and emphasis on a manifesto rather than purpose, are the aspects Mike obsesses over in this insightful read, wrapped in his trademark, comedic, copy. Mike Sharman, the co-founder of the creative, digital agency Retroviral that has made more brands 'go viral', globally, than any other agency in Africa, uses his unique storytelling proposition to provide insight into 12 years of building a business from scratch, while elevating his clients to emotional, (commercial) cult status. Mike Sharman delivers the well needed wake-up call that your brand needs (and your customers deserve). – Richard Mulholland
