Electrokinetic Particle Transport in Micro-/Nanofluidics Shizhi Qian,Ye Ai,2012-06-19 Numerous applications of micro-/nanofluidics are related to particle transport in micro-/nanoscale channels, and electrokinetics has proved to be one of the most promising tools to manipulate particles in micro/nanofluidics. Therefore, a comprehensive understanding of electrokinetic particle transport in micro-/nanoscale channels is crucial to the development of micro-/nanofluidic devices. *Electrokinetic Particle Transport in Micro-/Nanofluidics: Direct Numerical Simulation Analysis* provides a fundamental understanding of electrokinetic particle transport in micro-/nanofluidics involving electrophoresis, dielectrophoresis, electroosmosis, and induced-charge electroosmosis. The book emphasizes the direct numerical simulation of electrokinetic particle transport phenomena, plus several supportive experimental studies. Using the commercial finite element package COMSOL Multiphysics®, it guides researchers on how to predict the particle transport subjected to electric fields in micro-/nanoscale channels. Researchers in the micro-/nanofluidics community, who may have limited experience in writing their own codes for numerical simulations, can extend the numerical models and codes presented in this book to their own research and guide the development of real micro-/nanofluidics devices. Corresponding COMSOL® script files are provided with the book and can be downloaded from the author's website.

Global Air Transport Management and Reshaping Business Models for the New Era Kankaew, Kannapat,2022-05-27 The air transport industry is highly vulnerable to environmental changes as was seen when the recent COVID-19 pandemic caused most airline operations to cease. However, for decades airlines have been collapsing around the globe as the business of managing airline operations has become stressed due to price competition. This is detrimental to air carriers since air transport products and services are the same. Moreover, it impacts other industries such as tourism, hotels, and restaurants, which contribute to the derailment of economic and social activities. Thus, it is essential to determine new practices and strategies that can allow air transport management to be enriched and to flourish. *Global Air Transport Management and Reshaping Business Models for the New Era* provides a comprehensive collection of knowledge on the new era of business management on air transport. It provides strategies, technologies, and tools used in the reshaping of the air transport business model. Covering topics such as customer experience, robotic process automation, and airline alliances, this major reference work is an essential resource for airline managers, supply chain specialists, air transport managers, students and faculty of higher education, libraries, researchers, economists, government officials, and academicians.

Japanese Direct Investment in Mexico's Transport Equipment Sector Melba Falck-Reyes,Leo Guzman-Anaya,2018-06-19 This book introduces an interdisciplinary approach to the study of Japanese foreign direct investment determinants, the close relations between foreign investment and trade flows in the host country, and the effects and responses by the local economy. It provides an accessible and comprehensive view of the overall macro impacts and local effects associated with the increasing flow of Japanese firms to Mexico's automotive industry. The research and its outcomes presented here follow extensive fieldwork and use unique statistical datasets to integrate qualitative and quantitative approaches to the analysis. Carefully chosen case studies produce an integrated approach to the subject. As a result, the book fills a vacuum on this topic and provides readers with a clear understanding of the complex interactions among participating actors: Japanese multinationals and Japanese parts-and-components suppliers, Mexican local suppliers, government at the national and local levels, and cooperating Japanese agencies. By critically assessing current theories and empirical methodologies the monograph covers aspects related to the creation of regional production networks and their impact on trade patterns of the recipient country, location determinants of Japanese foreign investment, and spillover externalities in host entities. It presents the reader with a comprehensive view of the different levels of interaction between multinational firms, local recipient economies, and local suppliers and the challenges they face to engage in global chains of production. The book is highly recommended to academics and their students who seek to understand the complex international economic relations in the global economy. This compilation also serves as a valuable guide to policy makers, both at national and local levels, as it provides an informed analysis of how to engage local suppliers in regional and global production chains.

ECMT Round Tables Time and Transport European Conference of Ministers of Transport. Economic Research Centre,2005 For the majority of transport policies and projects, time savings rank among the most important benefits. Consequently, time valuation standards and conventions play a crucial role in the evaluation of transport policies and infrastructure investment projects. This Round Table revisited the extended literature on

the valuation of passenger time and discussed the under-researched topic of the value of time in freight transport. It assessed the increased value of time in international freight transport, given the trend towards globalisation. In particular, urban planners are concerned that an overvaluation of passenger time could give rise to excessive urban infrastructure investment which would induce low-density development of cities and urban sprawl. Transport policy measures that increase the speed and reliability of freight transport not only reduce its direct costs but have strong effects on inventory policies, logistics and even the location of firms. As recent empirical studies show, variations in time requirements for international transport, and increasingly short product and fashion cycles, have an influence on the pattern of foreign direct investment and international trade flows. Rational transport policy decision making has to take account of these indirect effects.

Sustainable Transport R Tolley,2003-08-29 Cycling and walking are both essential components in sustainable transport strategy and are becoming an ever more important part of urban planning. There is now a wealth of international experience of how well sustainable planning works in practice and how it can be improved. With a wide range of contributions from America, Australia, Europe as well as the UK, Sustainable transport sums up many of the lessons learnt and how they can be applied in improved planning. Non-motorised transport planning depends on combining improvements to infrastructure with education. There are chapters examining both national strategies and local initiatives in cities around the world, including such topics as changes to existing road infrastructure and the integration of cycling and walking with public transport. Since education is a critical element in sustainable transport planning, contributors also consider such topics as developing healthier travel habits and ways of promoting cycling and walking as alternatives to the car. With its blend of practical experience and suggestions for improvement, Sustainable transport is essential reading for urban planners, environmental groups and those researching transport issues. Comprehensive handbook covering sustainable transport initiatives world wide Focuses on walking and cycling as alternatives to motorised transport systems Presents practical advice on how to encourage sustainable transport schemes

Integrated Futures and Transport Choices Julian Hine,John Preston,2018-02-06 This title was first published in 2003. The UK transport White Paper A New Deal for Transport and new Transport Acts for England, Wales and Scotland have indicated and defined the future direction and policy agenda of national governments. The need for integrated transport raises key policy issues, among which are: the importance of sustainability; and the integration of transport policy with other areas of public policy, such as social exclusion and health. The idea of this direction in policy has implications for the changing nature of work, traveller information, interchange and public transport, freight distribution and the use of new technology. This volume also examines key areas of policy and regulation, which are developing as a result of the White Paper and the new Transport Acts. The volume brings together leading UK academics in the field of transport studies to discuss and reflect on these issues, and the state of transport policy in the UK within this new and developing policy framework.

Transport and Logistics in a Globalizing World Ilaria Mariotti,2014-09-26 Globalization of the economy, fragmentation of the production process, increasing externalization of TNCs activities through their global value chains and the widespread adoption of Just-in-Time have increased the flows of raw materials, intermediate goods and finished products, with a direct effect on the transport and logistics industry. This industry, indeed, plays a key role in connecting the different import and export markets and the vertically disaggregated components of production system, which are widespread in the world. The existing literature on transport and logistics is mainly focused on engineering research, transportation economics and management studies, disregarding the view of regional economics, which relates with the impact of economics on space, and therefore, on the impact of internationalisation on a specific industry – transport and logistics and its effects on space. The present book aims to fill the gap in the existing literature by presenting the state of the art of the impact of globalisation and internationalisation of the economy on this industry and focusing on the case of Italy.
