The Realization of Star Trek Technologies Mark E. Lasbury, 2016-08-24 As Star Trek celebrates its 50th anniversary, the futuristic tools of Kirk, Spock, Scott, and McCoy continue to come to life. This book merges Star Trek scientific lore—how the science of the time informed the implementation of technology in the series—and the science as it is playing out today. Scientists and engineers have made and continue to develop replicators, teletransporters, tractor beams, and vision restoring visors. This book combines the vision of 1966 science fiction with the latest research in physics, biotechnology, and engineering.

Introduction to the International Human Rights Regime Manfred Nowak, 2021-10-01 Human rights are the only universally recognized system of contemporary values which, during the last 50 years, has been gradually developed and defined by all States in a comprehensive international legal framework. The international human rights regime is closely related to international peace and security, development and a global trend towards pluralist democracy, good governance and the rule of law. International humanitarian and criminal law can today be considered as specific aspects of international human rights law, which after the end of the Cold War has become increasingly complex and difficult to oversee. The present textbook attempts to provide a first and at the same time comprehensive introduction into the idea and significance of human rights, its philosophical and theoretical foundations, historical development, the main structures and procedures of international human rights protection by the United Nations and regional organizations (Council of Europe, Organization of American States, African Union, OSCE and others), and modern trends, such as preventive mechanisms, international criminal law, human rights as essential elements of peace-keeping and peace-building operations, humanitarian intervention or the relationship between human rights and terrorism. The book perceives human rights as an inter-disciplinary topic and illustrates the theory of human rights with a considerable number of practical case-studies, graphics, statistics, procedural charts and textboxes. It serves as a textbook for students of law, political science, international relations and other academic fields related to human rights, but may as well be used as a first introduction for those working in the field, for NGO activists, legal practitioners and others interested in the fascinating world of universal human rights.

The Finite Difference Time Domain Method for Electromagnetics Karl S. Kunz, Raymond J. Luebbers, 2018-05-04 The Finite-Difference Time-domain (FDTD) method allows you to compute electromagnetic interaction for complex problem geometries with ease. The simplicity of the approach coupled with its far-reaching usefulness, create the powerful, popular method presented in *The Finite Difference Time Domain Method for Electromagnetics*. This volume offers timeless applications and formulations you can use to treat virtually any material type and geometry. *The Finite Difference Time Domain Method for Electromagnetics* explores the mathematical foundations of FDTD, including stability, outer radiation boundary conditions, and different coordinate systems. It covers derivations of FDTD for use with PEC, metal, lossy dielectrics, gyrotropic materials, and anisotropic materials. A number of applications are completely worked out with numerous figures to illustrate the results. It also includes a printed FORTRAN 77 version of the code that implements the technique in three dimensions for lossy dielectric materials. There are many methods for analyzing electromagnetic interactions for problem geometries. With *The Finite Difference Time Domain Method for Electromagnetics*, you will learn the simplest, most useful of these methods, from the basics through to the practical applications.

Nuclear Fuel Waste Management Reto Zach,Whiteshell Laboratories.

Environmental Science Branch,1997 This report highlights many of the key achievements of the biosphere program in support of the development of the disposal concept for Canadian nuclear fuel waste, particularly those achievements related to the development of the BIOTRAC biosphere model and its supporting research. That model was used for the assessment and review of the disposal concept in an environmental impact statement (EIS). The report also treats highlights related to alternative models, external scientific/technical reviews, EIS feedback, and the international BIOMOVs model validation program. Furthermore, it highlights basic aspects of future modelling and research needs in relation to siting a disposal facility, taking into account feedback from the various reviews and the EIS. Appendices include listings of key staff involved, all the scientific/technical reports produced, contracts let to outside agencies, and issues raised during the EIS review.

Reddy,2018-04-17 This book presents a wide range of tested and proven protocols relevant to a number of fields within biotechnology used in laboratory experiments in everyday phyecological (seaweed) research. A major focus will be on bioenergy related aspects of this emerging technology. These protocols will be written in a clear and concise manner using simple language permitting even nonspecialist to adequately understand the significance of this research. It will also contain all necessary notes and guidelines for successful execution of these experiments.

Intellectual Property, Antitrust and Cumulative Innovation in the EU and the US

Thorsten Käseberg,2012-06-08 For decades, the debate about the tension between IP and antitrust law has revolved around the question to what extent antitrust should accept that IP laws may bar competition in order to stimulate innovation. The rise of IP rights in recent years has highlighted the problem that IP may also impede innovation, if research for new technologies or the marketing of new products requires access to protected prior innovation. How this 'cumulative innovation' is actually accounted for under IP and antitrust laws in the EU and the US, and how it could alternatively be dealt with, are the central questions addressed in this unique study by lawyer and economist Thorsten Käseberg. Taking an integrated view of both IP and antitrust rules – in particular on refusals to deal based on IP – the book assesses policy levers under European and US patent, copyright and trade secrecy laws, such as the bar for and scope of protection as well as research exemptions, compulsory licensing regimes and misuse doctrines. It analyses what the allocation of tasks is and should be between these IP levers and antitrust rules, in particular the law on abuse of dominance (Article 102 TFEU) and monopolisation (Section 2 Sherman Act), while particular attention is paid to the essential facilities doctrine, including pricing methodologies for access to IP. Many recent decisions and judgments are put into a coherent analytical framework, such as IMS Health, AstraZeneca, GlaxoSmithKline (in the EU), Apple (France), Orange Book Standard (Germany), Trinko, Rambus, NYMEX, eBay (US), Microsoft and IBM/T3 (both EU and US). Further topics covered include: IP protection for software, interoperability information and databases; industry-specific tailoring of IP; antitrust innovation market analysis; and the WTO law on the IP/antitrust interface.

Improved Work Zone Design Guidelines and Enhanced Model of Travel Delays in Work Zones Helmut T. Zwahlen, 2006 The project focuses on two major issues - the improvement of current work zone design practices and an analysis of vehicle interarrival time (IAT) and speed distributions for the development of a digital computer simulation model for queues and travel delays in work zones. Important considerations in the development of work zone design guidelines include guidance, delineation, and the safety of workers and drivers. A nationwide survey of current work zone best practices was conducted. Based on the review of the existing ODOT guidelines, superior practices available in other states, relevant research, and professional judgment of personnel involved in work zone activities, a set of guidelines for work zone design are proposed. It is anticipated that these research findings will result in the better design of work zones which will minimize traffic delays and improve safety. In the second part of the project trailers, each using two Wavetronix microwave radar units in side-fire mode, were developed to nonintrusively measure traffic. The traffic was measured at six work zones sites with different types of lane configurations at different freeways in Ohio. Traffic on the road was also independently measured using video and radar, and the results compared to records from the trailers to verify that the trailers were measuring the traffic with reasonable accuracy. IAT data of successive vehicles in freeflowing traffic ahead of work zones were analyzed and IAT distributions were generated as a function of the traffic volume for each lane and relationships between traffic volumes and cumulative IAT distributions were established allowing a direct conversion from hourly traffic counts to corresponding cumulative IAT distributions. This conversion method produces fairly accurate cumulative IAT distributions for selected hourly traffic volumes. It was also found that the same cumulative IAT distribution can be used to model the free-flowing traffic at other freeway locations in Ohio, which means that the IAT distributions are portable and scalable and a microscopic digital computer simulation model based on queueing theory may be developed to investigate traffic delays in work zones.
