**The e-Policy Handbook** Nancy FLYNN, 2009-01-11  
Trillions of e-mails travel each year through corporate networks—and they're not all work-related. But for organizations wishing to protect themselves from liability, e-mail is no longer the only danger—they now have to contend with blogs, social networking sites, and other new technologies. Packed with electronic rules, step-by-step guidelines, sample policies, and e-disaster stories, this revised edition of The e-Policy Handbook helps readers: implement strategic electronic rules • prevent security breaches and data theft • safeguard confidential company and customer information • manage new and emerging technologies • write and implement effective policies • train employees. Updated to cover new technologies, including instant messaging, social networking, text messaging, video sites, and more, this is a comprehensive resource for developing clear, complete e-policies.

Engineering Optimization can be simply defined as choosing the best alternative among a set of feasible options. In all the engineering areas, optimization has a wide range of applications, due to the high number of decisions involved in an engineering environment. Chemical engineering, and particularly process engineering, is not an exception; thus stochastic methods are a good option to solve optimization problems for the complex process engineering models. In this book, the combined use of the modular simulator Aspen® Plus and stochastic optimization methods, codified in MATLAB, is presented. Some basic concepts of optimization are first presented, then, strategies to use the simulator linked with the optimization algorithm are shown. Finally, examples of application for process engineering are discussed. The reader will learn how to link the process simulator Aspen® Plus and stochastic optimization algorithms to solve process design problems. They will gain ability to perform multi-objective optimization in several case studies. Key Features: • The book links simulation and optimization through numerical analyses and stochastic optimization techniques • Includes use of examples to

illustrate the application of the concepts and specific guidance on the use of software (Aspen® Plus, Excel, MATLAB) to set up and solve models representing complex problems. • Illustrates several examples of applications for the linking of simulation and optimization software with other packages for optimization purposes. • Provides specific information on how to implement stochastic optimization with process simulators. • Enable readers to identify practical and economic solutions to problems of industrial relevance, enhancing the safety, operation, environmental, and economic performance of chemical processes.

*High-Vacuum Technology* Marsbed H. Hablanian, 2017-11-13 Offering a basic understanding of each important topic in vacuum science and technology, this book concentrates on pumping issues, emphasizes the behavior of vacuum pumps and vacuum systems, and explains the relationships between pumps, instrumentation and high-vacuum system performance. The book delineates the technical and theoretical aspects of the subject without getting in too deep. It leads readers through the subtleties of vacuum technology without using a dissertation on mathematics to get them there. An interesting blend of easy-to-understand technician-level information combined with engineering data and formulae, the book provides a non-analytical introduction to high vacuum technology.

Silicon Integrated Circuits Dawon Kahng, 2016-08-10

Silicon Integrated Circuits, Part 2 covers some of the most promising approaches along with the new understanding of processing-related areas of physics and chemistry. The first chapter is about the transient thermal processing of silicon, including annealing with directed-energy beams and rapid isothermal annealing; adiabatic annealing with laser and electron beams; pulsed melting; thermal flux annealing; rapid isothermal annealing; and several applications stemming from rapid annealing and semiconductor processing with directed-energy beams. The second chapter is concerned with the use of electron cyclotron resonance plasmas in two important materials processing techniques: reactive ion-beam etching and plasma deposition. The last chapter of the book deals with the exploding area of very

large scale integration processing and process simulation. Physicists, chemists, and engineers involved in silicon integrated circuits will find the book invaluable.
