Immunologic Defects in Laboratory Animals 1 M. Eric Gershwin, Bruce Merchant, 2012-12-06 Tiselius demonstrated that the immunologically active components of immune sera migrated electrophoretically in the gamma globulin region. His findings illuminated the classic observations of Jenner regarding development of resistance to infection, and those of von Pirquet, Pasteur, and Arthus regarding the transfer and specificity of resistance. Conceptual integration of these observations provided the impetus for the present modern era of immunology. Subsequent to Tiselius's work, multiple, rapid advances have occurred in the study of congenital and acquired immune deficiency states in mice, chickens, and humans. These studies have readily demonstrated that the immunologic ability of an organism to protect itself from environmental influences is a prerequisite for survival. Indeed, this necessity for protection from microenvironmental influences has promoted the evolutionary development of immunologic diversification, namely, host dependence upon a sophisticated, multifaceted network of cells and effector mechanisms responsible for the clearance and neutralization of toxins and potentially harmful pathogens. The obligate dependence of animals upon the functional integrity of their immunologic systems is illustrated by the ready invasion of ubiquitous organisms when the host is in a state of immune defense derangement. Nevertheless, derangements in immune function can range from partial to complete and can be compatible with survival. The consequences of such derangements run the gamut from subclinical disease to inevitable mortality.

Alcoholic and Non-Alcoholic Fatty Liver Disease Naga Chalasani, Gyongyi Szabo, 2015-12-10 This volume is the first text to concisely yet comprehensively cover developments for both alcoholic and nonalcoholic fatty liver disease in an organized fashion. Aspects of these two diseases covered in the book include global epidemiology and risk factors, pathogenesis, animal models, hepatic and extra-hepatic malignancies, treatment models, and current and emerging therapies. Written by experts in the field, *Alcoholic and Non-Alcoholic Fatty Liver Disease: Bench to Bedside* is a valuable resource for gastroenterologists, pathologists, and hepatologists who treat patients with alcoholic and nonalcoholic fatty liver disease.

Mouse Development Janet Rossant, Patrick P. L. Tam, 2002-03 This book represents a classic compilation of current knowledge about mouse development and its correlates to research in cell biology, molecular biology, genetics, and neuroscience. Emphasis is placed on the research strategy, experimental design, and critical analysis of the data, distinguishing this from other books that only focus on protocols for mouse developmental research. Selected chapters are indexed to electronic databases such as GeneBank, GenBank, Electronic Mouse Atlas, and Transgenic/Knockout, further increasing the utility of this book as a reference. *Broad-based overview of mouse development from fundamental to specialist levels *Extensive coverage of a wide range of developmental mutations of the mouse *Excellent benchmark illustrations of brain, craniofacial, gut and heart development *In-depth experiment-based

assessment of concepts in mammalian development *Focus on models of specific relevance to human development *Comprehensive reference to key literature and electronic databases related to mouse development *High-quality full-color production

New Developments in Antirheumatic Therapy K. D. Rainsford,G.P Velo,2012-12-06 At present we may be at the cross-roads in the therapeutic approaches we have for the treatment of the 100 or more rheumatic conditions. This is because we now recognise that although some advances have been made with the development of a large range of non-steroidal and steroidal drugs during the past two decades or so, we now recognise that many, if not all, of these have rather limited effects on many of the disease processes which underlie the manifestations of the various rheumatic states. Advances in molecular biology in the past 5-10 years have enabled these tools to be applied extensively for developing further our understanding of the rheumatic disease processes. In some cases these molecular tools (e. g. ,)-interferon, interleukin- 2, T-cell antibodies) have been directly employed as therapies themselves. While the outcome from trials with such agents in rheumatoid arthritis in particular has not been as would have been hoped, these results as with cyclosporin A and low-dose methotrexate in the therapy of rheumatoid arthritis have given us important indications for the approach employing what are generally described as immunomodulators to control this disease. But this may not be the same type of approach which is desirable for all types of rheumatic conditions. Indeed, even the way which the present range of drugs and other therapies are applied may not be the most effective and safe means of treating different types of arthritic conditions.

Neurogastroenterology - From the Basics to the Clinics H.-J. Krammer,M.V. Singer,2000-05-31 In the last decade, some outstanding progress has been made in the field of neurogastroenterology, a term which has been introduced to account for the crucial role of the enteric, autonomic and central nervous system in the regulation of gastrointestinal functions in health and disease. These proceedings of Falk Symposium No. 112 on Neurogastroenterology - From the Basics to the Clinics, held in Freiburg, Germany,

on 21-22 June 1999, reviews and discusses the fast-growing knowledge in this field in order to initiate more interdisciplinary discussions along with new research. Contributors include basic scientists, clinicians of various specialities, morphologists, physiologists, molecular biologists, embryologists, pharmacologists, surgeons, gastroenterologists and behavioural scientists interested in the central and the autonomic nervous system in relation to the gastrointestinal tract.
