Phatak's Materia medica of homoeopathic medicines S. R. Phatak, 1992

Keynotes of the Homoeopathic Materia Medica Adolph von Lippe, 1915

Material Computation Achim Menges, 2012-04-02 The production of architecture, both intellectually and physically, is on the brink of a fundamental change. Computational design enables architects to integrate ever more multifaceted and complex design information, while the industrial logics of conventional building construction are eroding

rapidly in a context of increasingly ubiquitous computer-controlled manufacturing and fabrication. A novel convergence of computation and materialisation is about to emerge, bringing the virtual process of design and the physical realisation of architecture much closer together, more so than ever before. Computation provides a powerful agency for both informing the design process through specific material behaviour and characteristics, and in turn informing the organisation of matter and material across multiple scales based on feedback from the environment. Computational design and integrated materialisation processes allow for uncovering the inherent morphogenetic potential of materials and thus are opening up a largely uncharted field of possibilities for the way the built environment in the 21st century is conceived and produced. In order to effectively introduce and outline the enabling power of computational design along with its inherent relationship to a biological paradigm, this publication looks at formation and materialisation in nature, integrative computational design, and engineering and manufacturing integration. Architectural contributors include: Cristiano Cecatto, Neri Oxman, Skylar Tibbits and Michael Weinstock. A scientific perspective by Philip Ball and J Scott Turner. Features: Buro Happold's SMART group, DiniTech, Foster + Partners' Specialist Modelling Group, the Freeform Construction group and Stuttgart University's Institute for Computational Design.

Swarm Planning Rob Roggema, 2013-09-11 This book shows that the problem of climate adaptation, which is described in social planning terms as 'wicked,' is at odds with the contemporary practice of spatial planning. The author proposes a new adjusted framework which is more adaptable

to unpredictable, wicked, dynamic and non-linear processes. The inspiration for this new method is the behaviour of swarms: bees, ants, birds and fish are capable of self-organization, which enables the system to become less vulnerable to sudden environmental changes. The framework proposed in Swarm Planning consists of these four elements: Two levels of complexity, the first being the whole system and the second its individual components. Each of these has different attributes for adapting to change. Five layers, consisting of networks, focal points, unplanned space, natural resources and emerging occupation patterns. Each layer has its own spatial dynamic, and each is connected to a spatial scale. Non-linear processes, which emerge in different parts of the framework and include emerging patterns, connectedness and tipping points among others. Two planning processes; the first, 'from small to large' works upward from the slowest changing elements to more rapidly-changing ones. The second, 'on the list of partners' addresses each layer from networks through emerging occupation patterns. Swarm Planning applies this framework to a series of pilot studies, and appraises its performance using criteria for an adaptive landscape. The results show that the use of the Swarm Planning Framework reduces the vulnerability of landscapes as well as the impact of climate hazards and disasters, improves response to unexpected hazards and contains adaptation strategies. "This book is a must for planners in government and the private sector as it outlines the concept, strategies and techniques for swarm planning. It is also an important guide for policymakers looking to engage communities in a dialogue about the adaptation planning process." Professor John Martin, La Trobe University "The ultimate value of the book lies in encouraging the planning community to consider options that go far

beyond those offered by business-as-usual planning methodologies developed for a set of operating conditions that are fast becoming obsolete. As such it makes an important and much needed contribution to the field." Assistant Professor Dr. Chrisna du Plessis, University of Pretoria

Experiencing the Environment Seymour

Wapner, 2012-12-06 The purpose of this volume is to explore theory, problem formulation, and methodology in experiencing the environment. In this embryonic field, the writings of a number of individuals already stand out as representative of distinctive viewpoints. In order to facilitate further development of the field, a conference! was proposed to gather in one place representatives of a number of major viewpoints with regard to the embryonic field of environmental psychology. It was hoped that a colloquy among such representatives would facilitate a clarification of the similarities and differences between the various perspectives, and might enable proponents of any given point of view to benefit from the insights of others with different orientations. Hopefully, it might also promote a greater articulation for this emerging field of inquiry. With these ends in mind, the sponsors of the conference asked the various prospective participants to present their theoretical positions and representative research illustrative of those positions. Some of the perspectives represented at the conference emphasized the point that the construal of phenomena depends heavily on the values and needs of perceivers. Implicit in this kind of position is the thesis that anyone who seeks to describe a complex happening is likely to shape it in terms

of presup positions, biases, etc. , that may not be shared by others.

Le Corbusier Talks with Students Le Corbusier, 1999-12 First published in France in 1943 and translated for English-speaking readers in 1961, *Le Corbusier Talks with Students* presents advice and commentary from the master of modernism for young architects-to-be. In chapters ranging from *Disorder* to *The Construction of Dwellings* to *A Research Workshop*, Le Corbusier discusses his views on architectural history and offers opinions on the future of the profession, while touching on his own projects for the Villa Savoye, the Cité Universitaire, and the Radiant City. Topics such as architecture's role in our directionless society; the balance between spiritual values and technical factors; and the importance of space, proportion, and color are explored by this renowned architect, and still resonate today, almost 50 years later. Our reprint of this classic

text is a facsimile of the 1961 edition, now available as an affordable paperback.
