Television Versus the Internet Barrie Gunter, 2010-09-01 This book will explore the questions raised by the technological developments that have encouraged the multiplication of TV channels. TV is moving through a period of rapid change. Governments around the world are switching from analogue to digital forms of transmission to further expand the amount of content that TV signals can carry. At the same time, competition for eyeballs has also grown from outside that traditional marketplace with the emergence of the Internet. The roll-out of broadband and increased bandwidth has had the greatest impact on television because online technology can readily convey the same content. All these changes have created a great deal more competition for viewers within the traditional TV marketplace. The Internet has proven to be especially popular with young people who have adopted its applications to a far greater extent than their elders, though even the latter have now begun to take up online activities in significant numbers. Are these audiences the same? Do people make a choice between these two media or do they use them both at different times and for different reasons? Can television utilise the Internet in profitable ways to enhance its market position? Will television have to evolve from its current state to provide the kinds of content reception services to which people have become accustomed in the online world? If it does need to change to survive, will this nevertheless mean a radical new configuration of content and the disappearance of 'channels' with fixed, pre-determined programme schedules? Examines the implications of new interactive communications technologies for the way people will use television in the future

Presents an analysis of changing styles of television viewing and changing orientations towards television Examines the growing importance of the broadband internet as a source of information and entertainment

Real Life in Real Time Johanna Brewer,Bo Ruberg,Amanda L. L. Cullen,Christopher J. Persaud,2023-08-22 The cultural ramifications of online live streaming, including its effects on identity and power in digital spaces. Some consider live streaming—the broadcasting of video and/or audio footage live online—simply an internet fad or source of entertainment, yet it is at the center of the digital mediation of our lives. In this edited volume, Johanna Brewer, Bo Ruberg, Amanda L. L. Cullen, and Christopher J. Persaud present a broad range of essays that explore the cultural implications of live streaming, paying special attention to how it is shifting notions of identity and power in digital spaces. The diverse set of international authors included represent a variety of perspectives, from digital media studies to queer studies, from human-computer interaction to anthropology, and more. While important foundational work has been carried out by game studies scholars, many other elements of streaming practices remain to be explored. To deepen engagement with diversity and social justice, the editors have included a variety of voices on such topics as access, gender, sexuality, race, disability, harassment, activism, and the cultural implications of design aesthetics. Live streaming affects a wide array of behaviors, norms, and patterns of communication. But above all, it lets participants observe and engage with real life as it unfolds in real time. Ultimately, these essays challenge us to look at both the possibilities for harm and the potential for radical change that live streaming presents.
