Observing Weather and Climate from the Ground Up National Research Council,Division on Earth and Life Studies,Board on Atmospheric Sciences and Climate,Committee on Developing Mesoscale Meteorological Observational Capabilities to Meet Multiple National Needs,2009-01-06 Detailed weather observations on local and regional levels are essential to a range of needs from forecasting tornadoes to making decisions that affect energy security, public health and safety, transportation, agriculture and all of our economic interests. As technological capabilities have become increasingly affordable, businesses, state and local governments, and individual weather enthusiasts have set up observing systems throughout the United States. However, because there is no national network tying many of these systems together, data collection methods are inconsistent and public accessibility is limited. This book identifies short-term and long-term goals for federal government sponsors and other public and private partners in establishing a coordinated nationwide network of networks of weather and climate observations.

Frank Batten Connie M. Sage,2011-08-29 Frank Batten Sr. (1927–2009) created the Weather Channel in 1982, despite mocking by colleagues in the media that around-the-clock weather broadcasts would be as exciting as watching paint dry. The network, and later its companion website, Weather.com, became the largest private weather company in the world and an American cultural

icon. Yet few have heard of Batten, a media pioneer whose Virginia newspaper was the only major daily to back school integration. At a time when American corporate greed was making headlines, without fanfare and limelight Batten built a media empire centered on honesty, integrity, and ethics. Starting out in his uncle's newspaper business in Norfolk, Virginia, as a reporter and advertising salesman, he assumed leadership of the Virginian-Pilot and Ledger-Star at the age of twenty-seven and grew Landmark Communications into a media powerhouse. He championed racial equality, a position not often taken in Virginia during the 1950s. His flagship newspaper, the Pilot, was the only daily paper in Virginia to back court-ordered school desegregation. He created two billion-dollar businesses and gave away more than \$400 million to charity, nearly all of it to education. As chairman of the Associated Press from 1982 to 1987, he helped guide the news agency back on a sound financial footing. Batten also faced a tremendous personal challenge that would have sidelined many: he lost his vocal cords to cancer two years before starting the Weather Channel. This is the untold story of a man whose name few recognize, yet who helped change the face of the media in the twentieth century.

Bear v. Shark Chris Bachelder, 2002-02-19 So it's kind of like a parlor game, then?... The question is apparently of Ancient Eastern extraction.... It seems to be a gut thing. The answer just feels right and then you come up with reasons.... Given a relatively level playing field -- i.e., water deep enough so that a Shark could maneuver proficiently, but shallow enough so that a Bear could stand and operate with its characteristic dexterity -- who would win in a fight between a Bear and a Shark? In this brilliant satire of our media-saturated culture, the sovereign nation of Las Vegas -- the entertainment capital of the world -- is host to Bear v. Shark II. After a disappointing loss in the first matchup between the land and the sea, the bear is back with a vengeance and out for blood. All of America is obsessed with the upcoming spectacle, so tickets are hard to come by. With an essay entitled Bear v. Shark: A Reason to Live, young Curtis Norman wins a national writing contest and four tickets to the event. The Normans load up their SUV and embark on a road trip to Vegas. As they head cross-country, the family is besieged by a dizzying barrage of voices: television and radio personalities, public service announcements, bear and shark pundits, Freudians, theologians, and self-published authors, in addition to the Bear v. Shark fanatics, cultists, and resisters they meet at roadside gas stations and restaurants. Overwhelmed by factoids, statistics, and ten-second debates, the Normans -- along with the rest of country -- can't seem to get their facts straight, much less figure

out a way to actually communicate with one another. Sound bites and verbal tics predominate; misheard, misunderstood, and just plain mistaken information is absorbed, mangled, and regurgitated to hilarious effect; and the most inane subjects -- from the disappearance of Dutch culture to the Shakespearean bias toward the bear -- are vigorously and obsessively debated. These meaningless exchanges of misinformation leave Mr. Norman disenchanted, world-weary, and ambivalent about the impending show, but the family eventually makes it to Vegas for an apocalyptic and surprisingly emotional ending. Written in quick, commercial-like segments that mirror the media it satirizes, Chris Bachelder's debut is a fiercely funny, razor-sharp novel about the odd intersection of zealotry and trivia, about the barriers to human connection in a society that values entertainment above all else. Through a clever act of novelistic subterfuge, Bachelder makes us laugh at our penchant for absurd and useless information while drawing us into a dazzling spectacle of his own imagination.

An Aristotelian Account of Induction Louis Groarke, 2009-11-01 In *An Aristotelian Account of Induction* Groarke discusses the intellectual process through which we access the first principles of human thought - the most basic concepts, the laws of logic, the universal claims of science and metaphysics, and the deepest moral truths. Following Aristotle and others, Groarke situates the first stirrings of human understanding in a creative capacity for discernment that precedes knowledge, even logic. Relying on a new historical study of philosophical theories of inductive reasoning from Aristotle to the twenty-first century, Groarke explains how Aristotle offers a viable solution to the so-called problem of induction, while offering new contributions to contemporary accounts of reasoning and argument and challenging the conventional wisdom about induction.

A Review of the Forest Service Remote Automated Weather Station (RAWS) Network John Zachariassen, 2003 The RAWS network and RAWS data-use systems are closely reviewed and

summarized in this report. RAWs is an active program created by the many land-management agencies that share a common need for accurate and timely weather data from remote locations for vital operational and program decisions specific to wildland and prescribed fires. A RAWs measures basic observable weather parameters such as temperature, relative humidity, wind speed, wind direction, and precipitation as well as fuel stick temperature. Data from almost 1,900 stations deployed across the conterminous United States, Alaska, and Hawaii are now routinely used to calculate and forecast daily fire danger indices, components, and adjective ratings. Fire business applications include the National Fire Danger Rating System (NFDRS), fire behavior, and fire use. Findings point to the fact that although the RAWs program works and provides needed weather data in support of fire operations, there are inefficiencies and significant problem areas that require leadership attention at the National level.

Weather Radar Networking C.G. Collier,M. Chapuis,2012-12-06 Meteorology is by nature a multidisciplinary and transnational subject and COST cooperation has proved to be a flexible and suitable framework at European level for meteorological activities such as the standardisation of observation techniques and harmonised transmission of meteorological data. Although meteorology is not covered by a specific Community programme as such, various Community actions dealing with

meteorology are now included in the EEC research programme on climatology (the EPOCH programme - 1989-92) of mechanisms of extreme and sudden concerning particularly the study meteorological events, in order to predict catastrophies and consequently to reduce human and material losses. In the context of COST cooperation, which is supported by the Commission of the European Communities, the COST 73 project (1986-1991) associates 16 countries in Western Europe with the aim of setting up a weather radar network providing real-time measurements of rain, snow or hail precipitations. In this project, radar data are transmitted and combined if appropriate with satellite data - in one or more compositing centres of the participating countries, in order to improve weather forecasting. Together with the COST 73 Management Committee, the Commission of the European Communities organized a seminar on this matter, in Brussels on 5-8 September 1989, at the half-way stage of the project.
