African Metaphysics, Epistemology and a New Logic Jonathan O. Chimakonam,L. Uchenna Ogbonnaya,2021-05-06 This book focuses on African metaphysics and epistemology, and is an exercise in decoloniality. The authors describe their approach to decoloniality as an intellectual repudiation of coloniality, using the method of conversational thinking grounded in Ezumezu logic. Focusing specifically on both African metaphysics and African epistemology, the authors put forward theories formulated to stimulate fresh debates and extend the frontiers of learning in the field. They emphasize that this book is not a project in comparative philosophy, nor is it geared towards making Africa/ns the object/subjects of philosophy. Rather, the book highlights and discusses philosophical insights that have been produced from the African perspective, which the authors argue must be further developed in order to achieve decoloniality in the field of philosophy more broadly.

Cyberspace in Peace and War Martin Libicki,2016-10-15 This book is written to be a comprehensive guide to cybersecurity and cyberwar policy and strategy, developed for a one- or two-semester class for students of public policy (including political science, law, business, etc.). Although written from a U.S. perspective, most of its contents are globally relevant. It is written essentially in four sections. The first (chapters 1 - 5) describes how compromises of computers and networks permit unauthorized parties to extract information from such systems (cyber-espionage), and/or to force these systems to misbehave in ways that disrupt their operations or corrupt their workings. The section examines notable hacks of systems, fundamental challenges to cybersecurity (e.g., the lack of forced entry, the measure-countermeasure relationship) including the role of malware, and various broad approaches to cybersecurity. The second (chapters 6 - 9) describes what government policies can, and, as importantly, cannot be expected to do to improve a nation's cybersecurity thereby leaving leave countries less susceptible to cyberattack by others. Among its focus areas are approaches to countering nation-scale attacks, the cost to victims of broad-scale cyberespionage, and how to balance intelligence and cybersecurity needs. The third (chapters 10 - 15) looks at cyberwar in the context of military operations. Describing cyberspace as the 5th domain of warfare feeds the notion that lessons learned from other domains (e.g., land, sea) apply to cyberspace. In reality, cyberwar (a campaign of disrupting/corrupting computers/networks) is quite different: it rarely breaks things, can only be useful against a sophisticated adversary, competes against cyber-espionage, and has many first-strike characteristics. The fourth (chapters 16 – 35) examines strategic cyberwar within the context of state-on-state relations. It examines what strategic cyberwar (and threats thereof) can do against whom – and how countries can respond. It then considers the possibility and limitations of a deterrence strategy to modulate such threats, covering credibility, attribution, thresholds, and punishment (as well as whether denial can deter). It continues by examining sub rosa attacks (where neither the effects nor the attacker are obvious to the public); the role of proxy cyberwar; the scope for brandishing cyberattack capabilities (including in a nuclear context); the role of narrative and signals in a conflict in cyberspace; questions of strategic stability; and norms for conduct in cyberspace (particularly in the context of Sino-U.S. relations) and the role played by international law. The last chapter considers the future of cyberwar.
