Open Mesencephalotomy and Thalamotomy for Intractable Pain B. Zapletal,2012-12-06 Severe, protracted pain defying control is being seen with in creasing frequency as a symptom of chronic disease. It accompanies many, mostly serious, disorders in various organs and parts of the human body, making the sufferer's life increasingly intolerable. It no longer fulfillR its mission of warning signal of disease present, protecting health, but on the contrary arises as an important factor in systematically reducing and preparing the final collapse of the defensive forces of the body, both in the somatic and psychic spheres. It can surprise nobody that patients tormented and plagued by severe pain do not wish to live under conditions primarily caused by incurable disease, and are looking forward longingly to their release by deat. h, if no help is forthcoming. Attempts to control such pain are, therefore entirely justified, necessary and logical. The treatment of intractable pain is without exception sympto matic in character. Efforts to control it by drugs are, even at present and despite the striking progress in pharmacology, unsatisfactory and inadequate. So far we know of no drug capable of effectively and systematically alleviating such pain without concurrently inter fering with the other sensitive-sensory components. In addition to the direct changes and dist. urbances of consciousness and personal ity, protracted conservative therapy results in addiction to narcot ics.

Encyclopedia of Social Media and Politics Kerric Harvey,2013-12-20 The Encyclopedia of Social Media and Politics explores how the rise of social media is altering politics both in the United States and in key moments, movements, and places around the world. Its scope encompasses the disruptive technologies and activities that are changing basic patterns in American politics and the amazing transformations that social media use is rendering in other political systems heretofore resistant to democratization and change. In a time when social media are revolutionizing and galvanizing politics in the United States and around the world, this encyclopedia is a must-have reference. It reflects the changing landscape of politics where old modes and methods of political communication from elites to the masses (top down) and from the masses to elites

(bottom up) are being displaced rapidly by social media, and where activists are building new movements and protests using social media to alter mainstream political agendas. Key Features This three-volume A-to-Z encyclopedia set includes 600 short essays on high-interest topics that explore social media’s impact on politics, such as “Activists and Activism,” “Issues and Social Media,” “Politics and Social Media,” and “Popular Uprisings and Protest.” A stellar array of world renowned scholars have written entries in a clear and accessible style that invites readers to explore and reflect on the use of social media by political candidates in this country, as well as the use of social media in protests overseas Unique to this book is a detailed appendix with material unavailable anywhere else tracking and illustrating social media usage by U.S. Senators and Congressmen. This encyclopedia set is a must-have general, non-technical resource for students and researchers who seek to understand how the changes in social networking through social media are affecting politics, both in the United States and in selected countries or regions around the world.

The Yew Chung Approach to Early Childhood Education Stephanie C. Sanders-Smith,Sylvia Ya-Hsuan Yang,Kutasha Bryan-Silva,2022-12-30 This volume details the Yew Chung Approach and the Twelve Values that exemplify the approach as a unique contribution to the field of early childhood education. The Yew Chung Education Foundation (YCEF) in Hong Kong is a nonprofit organization and a high-quality early childhood program that promotes a global lens and multilingualism through an emergent curriculum. This book explores the Twelve Values that exemplify the approach, including relationships, the emergent curriculum, inquiry-based pedagogy, and the multilingual and multicultural approach. Grounding these values in daily classroom practice and the broader sociocultural context of Hong Kong, it shows how the Yew Chung Approach effectively supports additional language learning through a progressive emergent curriculum with a high degree of child agency. It also explores the unique history of Hong Kong as an incubator and setting for the Yew Chung Approach and considers the relationships between the colonial history of the city, Hong Kong’s current status as a global city, and the mission of Yew Chung to provide children with a global lens. An important study which exemplifies and investigates a unique program and perspective within the field, this book will benefit scholarly and practitioner audiences within the global early childhood community, as well as appealing to academics, researchers and postgraduates working within early childhood education, comparative education, and bilingual education.

Handbook of Data Analysis Melissa A Hardy,Alan Bryman,2009-06-17 Electronic Inspection Copy available for instructors here 'This book provides an excellent reference guide to basic theoretical arguments, practical quantitative techniques and the methodologies that the majority of social science researchers are likely to require for postgraduate study and beyond' - Environment and Planning 'The book provides researchers with guidance in, and examples of, both quantitative and qualitative modes of analysis, written by leading practitioners in the field. The editors give a persuasive account of the commonalities of purpose that exist across both modes, as well as demonstrating a keen awareness of the different things that each offers the practising researcher' - Clive Seale, Brunel University 'With the appearance of this handbook, data analysts no longer have to consult dozens of disparate publications to carry out their work. The essential tools for an intelligent telling of the data story are offered here, in thirty chapters written by recognized experts.' - Michael Lewis-Beck, F Wendell Miller Distinguished Professor of Political Science, University of Iowa 'This is an excellent guide to current issues in the analysis of social science data. I recommend it to anyone who is looking for authoritative introductions to the state of the art. Each chapter offers a comprehensive review and an extensive bibliography and will be invaluable to researchers wanting to update themselves about modern developments' - Professor Nigel Gilbert, Pro Vice-Chancellor and Professor of Sociology, University of Surrey This is a book that will rapidly be recognized as the bible for social researchers. It provides a first-class, reliable guide to the basic issues in data analysis, such as the construction of variables, the characterization of distributions and the notions of inference. Scholars and students can turn to it for teaching and applied needs with confidence. The book also seeks to enhance debate in the field by tackling more advanced topics such as models of change, causality, panel models and network analysis. Specialists will find much food for thought in these chapters. A distinctive feature of the book is the breadth of coverage. No other book provides a better one-stop survey of the field of data analysis. In 30 specially commissioned chapters the editors aim to encourage readers to develop an appreciation of the range of analytic options available, so they can choose a research problem and then develop a suitable approach to data analysis.

Adam's Latin Grammar Alexander Adam,David Patterson,1827

Soil Erosion and Sediment Flux in Northern Jordan Sabine Kraushaar,2016-05-06 This book combines new quantitative erosion measurement methods with a geochemical fingerprint and a model-based approach to measure erosion and sediment flux in the Wadi Al-Arab, a Mediterranean to semi-arid catchment in northwest Jordan. The outcomes reveal the local importance of soil erosion and sediment yield in connection with sedimentation and pollution of surface water bodies, propose managed aquifer recharge strategies that focus on in-channel constructions, and can be used to support local soil management strategies. In Jordan, one of the most water scarcity-affected countries in the world, erosion and sedimentation negatively impact integrative water resource management projects, such as water reservoirs and groundwater recharge basins. This book combines a multiple-response approach with new qualitative methods, such as olive mound measurements and OSL dating of Roman cistern sediments, to obtain long-term average erosion rates in the Mediterranean to semi-arid Wadi Al-Arab catchment in northwest Jordan. The implementation and enhancement of a geochemical sediment fingerprint of the reservoir sediments helped to provide new insights on sediment connectivity. Lastly, the outcomes were compiled and tested in the SedNet model, which provides a more holistic view of the results at the catchment scale and can effectively complement local management strategies.
