Navigating Your Way to Startup Success Harlan Beverly, 2017-12-18 Startups, like sailing vessels, do not travel in straight lines. The wind and the waves of the real world move the ship, and your startup, in unpredictable ways. This book is designed to give you an analytical set of tools to help you navigate your startup or corporate innovation through the murky waters of real life. Every business has failures. No business succeeds without some change of plan. *Navigating Your Way to Startup Success* will show you how to create a startup designed to test its assumptions so those that are not worthy fail—often and fast. This book builds on modern startup management techniques like Agile and Lean to bring an analytical and quantitative framework to the most common startup failures. Navigating through those failures means finding your way to startup success. Harlan T Beverly, PhD holds a BS in Electrical and Computer Engineering, an MBA from UT Austin, and a PhD in Business from Oklahoma State University. Harlan teaches entrepreneurship at the University of Texas at Austin. He is also Assistant Director of the Jon Brumley Texas Venture Labs at UT Austin, the world's first university business accelerator. Harlan has successfully launched five hardware and 15 software products including the Killer NIC, 2007 Network Product of the Year (CPU Magazine). He has raised over \$30 million in venture financing in the challenging intersection of entertainment and technology.

AI 2005: Advances in Artificial Intelligence Shichao Zhang, Ray Jarvis, 2005-11-27 The 18th Australian Joint Conference on Artificial Intelligence (AI 2005) was held at the University of Technology, Sydney (UTS), Sydney, Australia from 5 to 9 December 2005. AI 2005 attracted a historical record number of submissions, a total of 535 papers. The review process was extremely selective. Out of these 535 submissions, the Program Chairs selected only 77 (14.4%) full papers and 119 (22.2%) short papers based on the review reports, making an acceptance rate of 36.6% in total. Authors of the accepted papers came from over 20 countries. This volume of the proceedings contains the abstracts of three keynote speeches and all the full and short papers. The full papers were categorized into three broad sections, namely: AI foundations and technologies, computational intelligence, and AI in specialized domains. AI 2005 also hosted several tutorials and workshops, providing an interacting mode for specialists and scholars from Australia and other countries. Ronald R. Yager, Geoff Webb and David Goldberg (in conjunction with ACAL05) were the distinguished researchers invited to give presentations. Their contributions to AI 2005 are really appreciated.

AI 2003: Advances in Artificial Intelligence Tamas D. Gedeon, Lance C.C. Fung, 2003-12-01 Consider the problem of a robot (algorithm, learning mechanism) moving along the real line attempting to locate a particular point ? . To assist the mechanism, we assume that it can communicate with an Environment ("Oracle") which guides it with information regarding the direction in which it should go. If the Environment is deterministic the problem is the "Deterministic Point - location Problem" which has been studied rather thoroughly [1]. In its pioneering version [1] the problem was presented in the setting that the Environment could charge the robot a cost which was proportional to the distance it was from the point sought for. The question of having multiple communicating robots locate a point on the line has also been studied [1, 2]. In the stochastic version of this problem, we consider the scenario when the learning mechanism attempts to locate a point in an interval with stochastic (i. e. , possibly erroneous) instead of deterministic responses from the environment. Thus when it should really be moving to the "right" it may be advised to move to the "left" and vice versa. Apart from the problem being of importance in its own right, the stochastic point location problem also has potential applications in solving optimization problems. In many optimization solutions—for example in image processing, pattern recognition and neural computing [5, 9, 11, 12, 14, 16, 19], the algorithm works its way from its current solution to the optimal solution based on information that it currently has. A crucial question is one of determining the parameter which the optimization algorithm should use.

AI*IA 2005: Advances in Artificial Intelligence Sara Manzoni, 2005-10-06

This volume collects the papers selected for presentation at the IX Congress of the Italian Association for Artificial Intelligence (AI*IA), held in Milan at the University of Milano-Bicocca (September 21-23, 2005). On the one hand this congress continues the tradition of AI*IA in organizing its biannual scientific meeting from 1989; on the other hand, this edition is a landmark in the involvement of the international community of artificial intelligence (AI), directly involving a broad number of experts from several countries in the Program Committee. Moreover, the peculiar nature of scientific research in artificial intelligence (which is intrinsically international) and several consolidated international collaborations in projects and mobility programs allowed the collection and selection of papers from many different countries, all around the world, enlarging the visibility of the Italian contribution within this research field. Artificial intelligence is today a growing complex set of conceptual, theoretical, methodological, and technological frameworks, offering innovative computational solutions in the design and development of computer-based systems. Within this perspective, researchers working in this area must tackle a broad range of knowledge about methods, results, and solutions coming from different classical areas of this discipline. The congress was designed as a forum allowing researchers to present and discuss specialized results as general contributions to AI growth.

Animal Bodies, Human Minds: Ape, Dolphin, and Parrot Language Skills W.A.

Hillix, Duane Rumbaugh, 2004 Several books chronicle attempts, most of them during the last 40 years, to teach animals to communicate with people in a human-designed language. These books have typically treated only one or two species, or even one or a few research projects. We have provided a more encompassing view of this field. We also want to reinforce what other authors, for example Jane Goodall, Sue Savage-Rumbaugh, Penny Patterson, Birute Galdikas, and Roger and Deborah Fouts, so passionately convey about our responsibility for our closest animal kin. This book surveys what was known, or believed about animal language throughout history and prehistory, and summarizes current knowledge and the controversy around it. The authors identify and attempt to settle most of the problems in interpreting the animal behaviours that have been observed in studies of animal language ability.

Artificial Intelligence Stephanie Sammartino McPherson, 2018 Artificial intelligence promises to make our lives easier and better. Learn about the accelerated pace of technology as things that were once science fiction become science fact--

Artificial Intelligence Saswat Sarangi, Pankaj Sharma, 2018-09-03 What will the future be? A dystopian landscape controlled by machines or a brave new world full of possibilities? Perhaps the answer lies with Artificial Intelligence (AI)—a phenomenon much beyond technology that has, continues to, and will shape lives in ways we do not understand yet. This book traces the evolution of AI in contemporary history. It analyses how AI is primarily being driven by capital as the only factor of production and its consequences for the global political economy. It further explores the dystopian prospect of mass unemployment by AI and takes up the ethical aspects of AI and its possible use in undermining natural and fundamental rights. A tract for the times, this volume will be a major intervention in an area that is heavily debated but rarely understood. It will be essential reading for researchers

and students of digital humanities, politics, economics, science and technology studies, physics, and computer science. It will also be key reading for policy makers, cyber experts and bureaucrats.

The Green Boat Mary Pipher, PhD, 2013-06-04 Mary Pipher takes on our planet's greatest problems with the skills of a truly gifted therapist. She knows why we avoid and deny the truth and she knows how we can heal ourselves and our communities even as we try to heal the earth. This book is a deep and true gift.—Bill McKibben, author of *Eaarth* In *Reviving Ophelia*, Mary Pipher offered a paradigm-shattering look at the lives of adolescent women. Now Pipher is back with another ground-breaking examination of everyday life, this time exploring how to conquer our fears about the major environmental issues that confound us and transform them into a positive force in our

lives. Pipher emphasizes the importance of taking small, positive steps to preserve what's important, drawing from her own experiences as part of a group fighting energy company TransCanada's installation of the Keystone XL oil pipeline across the Midwest, which will sit atop the Ogallala Aquifer, the source of 40% of the United States' fresh water. The challenges she confronts reveal surprising answers to the critical questions we face: How do we mobilize ourselves and our communities to work together to solve global problems? How do we stay happy amid very difficult situations? And what is the true meaning of hope? Both profound and practical, *The Green Boat* explains how we can attend to the world around us with calmness, balance, and great love.
