Age Estimation of the Human Skeleton Krista E. Latham,J. Michael Finnegan,2010 Age Estimation of the Human Skeleton is a needed up-to-date book providing anthropologists and anatomists with a broad spectrum of techniques focused on aging human skeletal remains. It represents the most current reference book devoted entirely to estimating age at death for skeletonized and decomposed human remains and is a convenient starting point for practical and research applications. This book is a valuable reference for all individuals interested in the identification or analysis of human remains including forensic anthropologists, bioarchaeologists, forensic odontologists, pathologists and anatomists at student and professional levels. Age Estimation of the Human Skeleton would serve as an ideal supplemental textbook for introductory and advanced osteology and forensic anthropology courses. Age Estimation of the Human Skeleton is a collection of some of the latest research in age estimation techniques of human skeletal remains. It compiles recent scientific research on age at death estimation using dental and gross skeletal morphological indicators of age, as well as histological and multifactorial age estimation techniques. Age estimation methods from all life-stage categories, including: fetal, sub-adult, and adult are included in the book. Age Estimation of the Human Skeleton also includes chapters that evaluate and review the older, more traditional aging techniques as well as information that explores future directions and considerations for research in this area. Overall, Age Estimation of the Human Skeleton bolsters the references available to researchers in academic, laboratory, and medicolegal facilities and is an attractive text to a sizable spectrum of analysts.

Calculated Values William Deringer,2018-02-19 Modern political culture features a deep-seated faith in the power of numbers. This text ensures that practitioners recognize when an assessment is beyond their area of expertise or beyond verification depending upon the clinical data available. Each key approach to age evaluation has been allotted a single chapter, written by an international leader in the particular field. The book also includes summary chapters that relay readily accessible data for use by the practitioner, and includes important “ageing milestones.” This book is indispensable where problems of immigration and legal standing, juvenile vs. adult criminal status, and responsibilities of law enforcement to protect vulnerable persons are key issues on a daily basis.
