ACARS - A Users Guide Lionel K. Anderson MSc,2010-07-07 Aircraft Communications Addressing and Reporting System (ACARS) is a digital datalink system for transmission of short, and relatively simple messages between aircraft and ground stations using the airband VHF radio link. The message protocol was designed by Aeronautical Radio Incorporated (ARINC) to replace their VHF voice service and deployed in 1978 using telex type format. SITA, a multinational information technology company, later augmented their worldwide data network by adding ground radio stations to provide ACARS service.

Airline Microeconomics Tony Webber,2022-07-25 This book presents readers with a technical tool-kit to understand the economics of airlines. It starts by covering the key language and glossary of the air travel business, which is necessary for graduates or first-time employees in aviation to understand the content of conversations, meetings, presentations and internal aviation communications. It then breaks down the complexity of the demand side of the air travel business. The book then analyses revenue over two distinct time horizons, specifically the short and medium runs, recognising the fact that airlines operate to a fixed number of seats over a short horizon because of the way that they schedule services in advance of departure. By combining revenue and costs, the book then analyses airline profit, with a focus on the short run and medium run decision variables that maximise airline profit. The remainder of the book analyses various important topics in air transport economics, including competition in airline markets, key rules, regulations and taxes that affect the return on capital in aviation, the way that airlines form relationships, and the economics of the market for oil and jet fuel, among others.

The information is widely backed up with citations to patents and published literature. Communion, Covenant, and Creativity Brian Haymes,Richard L. Kidd,2020-03-16 This book is a follow-up to a previous volume by the same three authors, Baptists and the Communion of Saints: A Theology of Covenanted Disciples, though it does not require familiarity with the first study. The present book offers new perspectives on belief in the communion of saints by interpreting it through the idea of covenant, with its two dimensions of relations with God and with each other. Giving attention to the creative arts of painting, music, poetry, and story writing, the authors explore indications of a hidden communion of saints through embodiment, memory, and connectivity. Included are studies of the work of visual artists Paul Nash and Mark Rothko; musicians John Tavener, Elgar, and Brahms; and writers Thomas Hardy, T. S. Eliot, and James Joyce. Theological reflection on these hints of communion offers a vision of an ongoing communion of prayer with the saints, alive and dead, which does not depend on a dualistic idea of a disembodied soul existing after death but which affirms the Christian tradition of the resurrection of the body. Communion, covenant, and creativity are thus linked to develop a Christian aesthetics based on a mutual indwelling between the triune God and the world.

Human Resource Management and the Implementation of Change Paritosh Mishra,Balvinder Shukla,R Sujatha,2021-10-14 With the increased pace of global, economic and technological development, change has become an inevitable feature of any organisation to survive in the competitive market. If it is a planned change process, the HR practitioner can use any of the existing general models or theories of change and use suggestive interventions to increase effectiveness and capability to change itself. When the magnitude of change is unpredictable or the degree of the organisational process or systems is unorganised, the existing models or practice of planned change is still in the formative stage, and there is room for continuous refinement and improvement. This book will bridge this gap in the current organisational development and change literature by benefiting the HR practitioner with six real

case studies. The cases bring out the interventions adopted, key activities associated with the successful implementation of interventions and the critical role played by HR in achieving organisational effectiveness. This book captures the transformational journey of a diverse set of companies and weaves various dimensions into a common coherent framework for the field of HRM in Change Management. The case studies illustrate six powerful organisational experiences, listing the major activities contributing to effective change management from motivating change, vision, support from key stakeholders, transition management to organisational and HR commitment for implementation. By demonstrating the role of HR as a 'change agent,' this volume will be valuable to researchers, academics, managers and students in the fields of human resource management and change management.

Water in Biomechanical and Related Systems Adam Gadomski, 2021-04-21 The contributed volume puts emphasis on a superior role of water in (bio)systems exposed to a mechanical stimulus. It is well known that water plays an extraordinary role in our life. It feeds mammalian or other organism after distributing over its whole volume to support certain physiological and locomotive (friction-adhesion) processes to mention but two of them, both of extreme relevance. Water content, not only in the mammalian organism but also in other biosystems such as whether those of soil which is equipped with microbiome or the ones pertinent to plants, having their own natural network of water vessels, is always subjected to a force field. The decisive force field applied to the biosystems makes them biomechanically agitated irrespective of whether they are subjected to external or internal force-field conditions. It ought to be noted that the decisive mechanical factor shows up in a close relation with the space-and-time scale in which it is causing certain specific phenomena to occur. The scale problem, emphasizing the range of action of gravitational force, thus the millimeter or bigger force vs. distance scale, is supposed to enter the so-called macroscale approach to water transportation through soil or plants' roots system. It is merely related to a percolation problem, which assumes to properly inspect the random network architecture assigned to the biosystems invoked. The capillarity conditions turn out to be of prior importance, and the porous-medium effect has to be treated, and solved in a fairly approximate way. The deeper the scale is penetrated by a force-exerting and hydrated agent the more non-gravitational force fields manifest. This can be envisaged in terms of the corresponding thermodynamic (non-Newtonian) forces, and the phenomena of interest are mostly attributed to suitable changes of the osmotic pressure. In low Reynolds number conditions, thus in the (sub)micrometer distance-scale zone, they are related with the corresponding viscosity changes of the aqueous, e.g. cytoplasmatic solutions, of semi-diluted and concentrated (but also electrolytic) characteristics. For example, they can be observed in articulating systems of mammals, in their skin, and to some extent, in other living beings, such as lizards, geckos or even insects. Through their articulating devices an external mechanical stimulus is transmitted from macro- to nanoscale, wherein the corresponding osmotic-pressure conditions apply. The content of the proposed work can be distributed twofold. First, the biomechanical mammalian-type (or, similar) systems with extraordinary relevance of water for their functioning will be presented, also including a presentation of water itself as a key physicochemical system/medium. Second, the suitably chosen related systems, mainly of soil and plant addressing provenience, will be examined thoroughly. As a common denominator of all of them, it is proposed to look at their hydrophobic and/or (de)hydration effects, and how do they impact on their basic mechanical (and related, such as chemo-mechanical or piezoelectric, etc.) properties. An additional tacit assumption employed throughout the monograph concerns statistical scalability of the presented biosystems which is equivalent to take for granted a certain similarity between local and global system's properties, mostly those of mechanical nature. The presented work's chapters also focus on biodiversity and ecological aspects in the world of animals and plants, and the related systems. The chapters' contents underscore the bioinspiration as the key landmark of the proposed monograph.

The Low Cost Carrier Worldwide Sven Gross, Michael Lück, 2016-02-17 Low Cost Carriers (LCCs) have become an integral part of today's air transport and tourism industries. Originating in the United States, the low-cost concept has subsequently been adopted by airlines on all continents. LCCs in Europe and North America, and to some extent in Asia, have already been well covered by academic literature. However, scientific publications on the topic of LCCs in Africa, Latin America, the Middle East, Australia and New Zealand are scarce. This volume provides the first comprehensive overview of developments, the legal framework and the current situation of the low-cost carrier phenomenon across the globe. It contains a dozen chapters, each dedicated to a region, all written by highly experienced and renowned experts from around the world. The Low Cost Carrier Worldwide is written primarily for upper-level undergraduate and postgraduate students, as well as researchers and practitioners within the fields of aviation, transport and tourism.
