ICT Innovations 2016 Georgi Stojanov,Andrea Kulakov,2017-10-11 The International Conference on ICT Innovations was held in September 2016, in Ohrid, Macedonia, with the main topic “Cognitive Functions and Next Generation ICT Systems”. We live in the era where technologies are intimately woven into virtually all aspects of daily life and are becoming almost invisible. While these technologies have considerable benefits, they also have a number of shortcomings and unforeseen consequences. For example, on the one hand, bodily sensors that track physical activity, physiological parameters and sleep patterns can help promote healthy habits and can enable early detection of problems. On the other hand, attention spans are becoming shorter and shorter due to constant interruptions by notifications, emails, and instant messages being delivered to cell phones or watches, and similar disturbances. Moreover, the privacy issues involved in storing and manipulation of these data must not be neglected. The technological convergence of sciences that were considered separate in the past, like information and communication technologies, cognitive sciences, nanotechnologies and biotechnologies, determines not only our society, health and economy, but also our education and culture. The conference gathered academics, professionals and practitioners involved in developing solutions and systems in the industrial and business arena, especially innovative commercial implementations, to discuss novel applications of these next-generation, emerging technologies in the context of human cognitive functions.

Advancing Health Education With Telemedicine Lopez, Mildred,2021-12-10 While telemedicine was not a new concept before the COVID-19 pandemic, it has certainly helped to propel telehealth as a popular solution and tool for patients to continue to use well after the impacts of COVID-19 have been felt. However, telehealth also provided solutions for health institutions faced with the challenge of preparing the next generation of medical professionals remotely. Telemedicine allowed medical educators to accompany students in their first encounters with patients and to simulate practical scenarios. Through the pandemic, educators have striven to be more creative and propose solutions to overcome adversities such as language barriers, access to technological infrastructure, and lack of legal framework. Advancing Health Education With Telemedicine discusses and presents alternatives on taking advantage of available technologies and infrastructure of telemedicine and e-health to advance health professionals' education. This need emerged amid the pandemic to provide patients and their families with

support and guidance, but it also brought opportunities to students to continue their training and be involved in this once-in-a-lifetime experience. Covering topics such as disease-awareness campaigns, medical education, and online clinical simulation, this book serves as a dynamic resource for medical students, medical professionals, medical directors, educational software developers, researchers, communications experts, professors, and academicians.
