AppleScript: The Missing Manual Adam Goldstein, 2005-01-31 From newspapers to NASA, Mac users around the world use AppleScript to automate their daily computing routines. Famed for its similarity to English and its ease of integration with other programs, AppleScript is the perfect programming language for time-squeezed Mac fans. As beginners quickly realize, however, AppleScript has one major shortcoming: it comes without a manual. No more. You don't need a degree in computer science, a fancy system administrator title, or even a pocket protector and pair of nerdy glasses to learn the Mac's most popular scripting language; you just need the proper guide at your side. **AppleScript: The Missing Manual** is that guide. Brilliantly compiled by author Adam Goldstein, **AppleScript: The Missing Manual** is brimming with useful examples. You'll learn how to clean up your Desktop with a single click, for example, and how to automatically optimize pictures for a website. Along the way, you'll learn the overall grammar of AppleScript, so you can write your own customized scripts when you feel the need. Naturally, **AppleScript: The Missing Manual** isn't merely for the uninitiated scripter. While its hands-on approach certainly keeps novices from feeling intimidated, this comprehensive guide is also suited for system administrators, web and graphics professionals, musicians, scientists, mathematicians, engineers, and others who need to learn the ins and outs of AppleScript for their daily work. Thanks to **AppleScript: The Missing Manual**, the path from consumer to seasoned scripter has never been clearer. Now you, too,

can automate your Macintosh in no time.

App Use and Patient Empowerment in Diabetes Self-Management Nicola Brew-Sam,2020-02-03 Patient empowerment is examined as a multi-dimensional factor influencing the use of diabetes self-management apps. The research design includes three studies conducted in Singapore. Study 1 examines how features of diabetes self-management apps correspond with theoretical indicators of empowerment, as well as app quality. Study 2 uses semi-structured face-to-face interviews with diabetes patients to draw first conclusions about the relevance of empowerment for diabetes app use. Study 3 includes an online patient survey, and uses cluster analytical methods to test the preliminary Study 2 results (typology of app use), as well as binary logistic regression to compare the strength of influence of various antecedent factors on the likelihood of diabetes app use. The studies show that especially the support by private social patient networks and the medical specialties of supervising physicians play a crucial role for technology-supported self-management.

Growth Factors and Alzheimer's Disease Franz

Hefti,Philippe Brachet,Bruno Will,2013-03-08 The study of the relationships between neurotrophic factors (NGF, FGF, amyloid) and neurodegenerative disorders (especially Alzheimer's disease) is of major importance not only for understanding the pathogenesis of the latter, but also for the pharmacological approach to this disease. Information on the subject stemming from the symposium in Strasbourg in April, 1990, organized by the Fondation IPSEN is presented in this book. It provides stimulating hypotheses about the possible role of growth factors in the generation of senile plaques, the process of degeneration and regeneration in Alzheimer's disease, the expression of the gene of NGF and the possible use of NGF in treatment.
