Gps Technology for Walking, Driving, Boating, Flying Jon Schiller, Dr, PhD, Jon Schiller, Ph.d., 2013-03-02 Your author was chief engineer on the Avionics for the F111 fighter aircraft which was the first military aircraft to include GPS for its navigation system. That was before the days of widespread use of NanoTechnology in electronics; as a result the F111 GPS was in a box the size of a Personal Computer and cost around half million dollars. I have a Tom-Tom GPS for my auto which is palm sized and cost a few hundred dollars. In 2012 I bought a 4 inch Samsung SIII smartphone which cost less than \$200 and which included a free GPS App. I also bought a Toshiba Thrive Tablet for less than \$300 which contains a free Google GPS App. GPS can be downloaded free to any Android mobile device. These free Google GPS Apps use Google navigation maps, for which you get charged data usage by your Android mobile server. You can download a more sophisticated GPS program that includes downloaded maps for which you pay a once only price, which avoids the data cost for using the maps which are stored in your mobile device memory. I took a test flight in the Caltech flying club aircraft that included a GPS navigation system with an easy to comprehend display. One of the benefits of this aircraft GPS is it would permit making IFR approaches to airports that lack an FAA ILS approach system, such as the airport here in Lompoc, CA, where I live. This book is intended to provide the status of GPS technology for use in walking, driving, boating and flying in 2013.

The Mindblower Androids Randall Edward Foss, 2018-01-29 As androids proliferate, become highly skilled, and become difficult to tell apart from humans, Mytown Mining, Inc. takes full advantage of the situation to secretly rise up from below and give those responsible for top secret plans in the United States Air Force all that it can handle in the remotest western skies. Meanwhile, the three members of the Braun family, Ben, Jenny, and Max, are plucked from their normal routine to participate voluntarily in the top secret plans along with a few others to battle the crooked corporation sometimes underground, but mostly in the air. Ben, the inventor and manufacturer of the Mindblower, a sleek electronic device that boosts memory and enhances mental acuity, disappears on a family hike in the rain forest. When Jenny, his wife and a traveling pharmaceutical sales representative, and Max, his teenage son, try to find him in Jenny's small plane, they discover the USAF top secret facilities and its latest top secret aircraft and androids. Then as they and their friends continue their search for Ben, they find themselves fighting for their lives and for those humans and androids beside them until they discover much more about what really goes on between the military and the bad mining corporation and the future for both humans and androids. *The Mindblower Androids* is the second novel in a trilogy by Randall Edward Foss, beginning with *The Mindblower Families*. The story continues with *The Mindblower Orbs*, coming soon. Gradually, the recurring characters develop into greater importance as they are thrust deeper into the mysteries behind corporate control over the U.S. government and over energy economics. Mytown Mining, Inc., using android miners instead of human labor to dig deeper in remote regions first on earth and then in space for new energy reserves, must fight off both human and android heroes seeking to curtail its overbearing dominance threatening all human safety and freedom. Author_Bio: Randall Edward Foss has lived in Phoenix, Arizona for the past twelve years, but is originally from Tacoma, Washington. He holds a bachelor's degree in English and a teaching certificate in both English and Economics. He currently lives alone, and works full time for a large transportation company. The Future of Inflight Entertainment in Europe, According to Passenger Expectations: Why Airlines Should Embrace Consumer Technology Jasmin Schawalter,2014-04-15 Consumerization - passengers toting their tablets, laptops, smartphones and e-readers on planes - has forced airlines to re-think. Should they continue to invest heavily into Inflight Entertainment (IFE) systems, or just concentrate on offering Wi-Fi and power in the cabin? The goal of this research was to define the IFE offer of the future. Four barriers that split the world into the three regions Europe, Asia and USA in terms of IFE development were identified: the cultural, the commercial, the technological and the legal barrier. This book focuses on Europe, which lags mostly behind with IFE out of these three regions. For example, as opposed to the US, no major European airline offers inflight Wi-Fi widely on its network, and in contrast to leading Middle Eastern airlines none offers inflight live TV or the usage of mobile phones without restriction, like on the ground. The target was to define IFE from a consumer perspective. To capture the latter the author evaluated consumer satisfaction methodologies and decided to go with the Kano approach, which categorizes alternatives of a product or service, in this case IFE, in must-be, attractive and indifferent elements. A representative online survey revealed movies and power to be must-be, TV and Wi-Fi to be attractive and the rest, e-books, music, games and duty free onboard, to be indifferent elements of IFE. The majority of people indicated that they would pay for movies and Wi-Fi but not for power supply, TV or other content. Differently said, content-wise passengers only insisted in the supply of movies, for the rest they expected the airline to provide Internet and power so they themselves could get the content. Further, sub-groups were analysed - people within the sample with mutual characteristics like gender, travel frequency or ownership of smart devices. So was music on a plane a must for women and owners of iPhones were more willing to pay for apps than others. Overall, country of residence, travel purp
