Cardboard VR Projects for Android Jonathan

Linowes, Matt Schoen, 2016-05-17 Develop mobile virtual reality apps using the native Google Cardboard SDK for Android About This Book Learn how to build practical applications for Google's popular DIY VR headset Build a reusable VR

graphics engine on top of the Cardboard Java SDK and OpenGL ES graphics libraries The projects in this book will showcase a different aspect of Cardboard development—from 3D rendering to handling user input Who This Book Is For The book is for established Android developers with a good knowledge level of Java. No prior OpenGL or graphics knowledge is required. No prior experience with Google Cardboard is expected, but those who are familiar with Cardboard and are looking for projects to expand their knowledge can also benefit from this book. What You Will Learn Build Google Cardboard virtual reality applications Explore the ins and outs of the Cardboard SDK Java classes and interfaces, and apply them to practical VR projects Employ Android Studio, Android SDK, and the Java language in a straightforward manner Discover and use software development and Android best practices for mobile and Cardboard applications, including considerations for memory management and battery life Implement user interface techniques for menus and gaze-based selection within VR Utilize the science, psychology, mathematics, and technology behind virtual reality, especially those pertinent to mobile Cardboard VR experiences Understand Cardboard VR best practices including those promoted by Google Design Lab. In Detail Google Cardboard is a low-cost, entry-level media platform through which you can experience virtual reality and virtual 3D environments. Its applications are as broad and varied as mobile smartphone applications themselves. This book will educate you on the best practices and methodology

needed to build effective, stable, and performant mobile VR applications. In this book, we begin by defining virtual reality (VR) and how Google Cardboard fits into the larger VR and Android ecosystem. We introduce the underlying scientific and technical principles behind VR, including geometry, optics, rendering, and mobile software architecture. We start with a simple example app that ensures your environment is properly set up to write, build, and run the app. Then we develop a reusable VR graphics engine that you can build upon. And from then on, each chapter is a self-contained project where you will build an example from a different genre of application, including a 360 degree photo viewer, an educational simulation of our solar system, a 3D model viewer, and a music visualizer. Given the recent updates that were rolled out at Google I/O 2016, the authors of Cardboard VR Projects for Android have collated some technical notes to help you execute the projects in this book with Google VR Cardboard Java SDK 0.8, released in May 2016. Refer to the article at

<https://www.packtpub.com/sites/default/files/downloads/GoogleVRUpdateGuideforCardbook.pdf> which explains the updates to the source code of the projects. Style and approach This project based guide is written in a tutorial-style project format, where you will learn by doing. It is accompanied by in-depth explanations and discussions of various technologies, and provides best practices and techniques.

The second book is a new improved English translation of William Gilbert's banned Latin 1600 'De Magnete' or 'On The Magnet'. This is rather easier to read than its two earlier translations, and significantly helps to clarify Gilbert's 'attraction' physics which Newton put as one of the two mathematized physics options and which he is believed to have privately favoured. It is basically a novel signal-response or remote-control physics that may still have relevance.

Breaking Interstellar Michael Tobin, 2017-04-05

Humanity has ruined Earth's biosphere as a byproduct of extravagant living. Soon Mother Nature will not be able to support us in the fashion we require for basic existence. We need new worlds; we need them soon. Only intelligent machines can survive the long years to reach them and still be able to function as scientists and parental figures for the new humans that are born on those alien worlds. Humanity has enjoyed a nurturing and beautiful planet throughout the long evolutionary journey that Mother Nature has gracefully allowed our species. However, as with most sentient life forms on other worlds, we too have succumbed too the greedier side of our nature and are quickly losing grace with our planets ability to support us with a viable biosphere. Luckily for us, we have progressed far enough along the technological path so that we actually have a chance for success if we choose to attempt migration to favorable worlds outside of our own solar system. Embark on a journey that tells a tale of one possible way for the human species to achieve freedom from our own Mother Nature, and travel to other worlds where her lovely twin sisters await our arrivals; so that we might have extra chances for long term survival. From finding enough raw materials in the asteroid belt for attempting such a journey, to the extreme technology and stubbornness of one man to see his dream of transplanting humans into the cosmos become a reality. However, he can't do it alone; and through sheer good luck, good karma, or both, enough hard working and dedicated people (carbon based and metal) come to his cause and help get it

off the ground, and on its way into the great void that exists between the stars.

What's Next Geoffrey Keane, 2012-09-24 The story takes place a thousand years into the future. There is no more war because we are all living under a single world government, and we all vote on every issue of importance to us, educated by government emails and our internet access otherwise, but we have to pass a test showing that we understand the background and major

considerations behind any issue we wish to vote on, otherwise we won't be able to vote on that issue. Politicians must do whatever the consensus vote subscribes, so we are truly represented as a people. However, there are still some issues where society has favored conservative protection, particularly of children, and despite social science observations that overly harsh consequences don't necessarily deter offenses of this nature, very harsh consequences are still prevalent, and they are more far reaching now because we have synthetic people (Androids) made of synthetic bone, muscle tissue and skin, and their computer brains are psychically linked to their owner, usually of the opposite sex; and of course our children can also become connected as well. This is a story of a family whose lives are changed by this new technology, yet they all mature and become educated over time, and some surprising things happen when you combine intelligence with technology!
