Why Do We Recycle? Frank Ackerman,2013-04-15 The earnest warnings of an impending solid waste crisis that permeated the 1980s provided the impetus for the widespread adoption of municipal recycling programs. Since that time America has witnessed a remarkable rise in public participation in recycling activities, including curbside collection, drop-off centers, and commercial and office programs. Recently, however, a backlash against these programs has developed. A vocal group of anti-recyclers has appeared, arguing that recycling is not an economically efficient strategy for addressing waste management problems. In *Why Do We Recycle?* Frank Ackerman examines the arguments for and against recycling, focusing on the debate surrounding the use of economic mechanisms to determine the value of recycling. Based on previously unpublished research conducted by the Tellus Institute, a nonprofit environmental research group in Boston, Massachusetts, Ackerman presents an alternative view of the theory of market incentives, challenging the notion that setting appropriate prices and allowing unfettered competition will result in the most efficient level of recycling. Among the topics he considers are: externality issues -- unit pricing for waste disposal, effluent taxes, virgin materials subsidies, advance disposal fees the landfill crisis and disposal facility siting container deposit (bottle bill) legislation environmental issues that fall outside of market theory calculating costs and benefits of municipal recycling programs life-cycle analysis and packaging policy -- Germany's Green Dot packaging system and producer responsibility the impacts of production in extractive and manufacturing industries composting and organic waste management economics of conservation, and material use and long-term sustainability Ackerman explains why purely economic approaches to recycling are incomplete and argues for a different kind of decisionmaking, one that addresses social issues, future as well as present resource needs, and non-economic values that cannot be translated into dollars and cents. Backed by empirical data and replete with specific examples, the book offers valuable guidance for municipal planners, environmental managers, and policymakers responsible for establishing and implementing recycling programs. It is also an accessible introduction to the subject for faculty, students, and concerned citizens interested in the social, economic, and ethical underpinnings of recycling efforts.

Recycling from Waste in Fashion and Textiles Pintu Pandit,Shakeel Ahmed,Kunal Singha,Sanjay Shrivastava,2020-07-15 The alarming level of greenhouse gases in the environment, fast depleting natural resources and the increasing level of industrial effluents, have made every single manufacturing activity come under the scrutiny of sustainability. When all kinds of waste such as clothes, furniture, carpets, televisions, shoes, paper, food wastes etc. end up in the landfill, only a few of them are naturally decomposed and thus a large majority remains as non-biodegradable. It is for this reason, efforts are concentrated to reduce the burden on earth by this waste, and as far as used textile products are concerned, there are now attempts to recycle or up-cycle. This book addresses the role of sustainability by using textile waste in fashion and textiles with respect to manufacturing, materials, as well as the economic and business challenges and opportunities it poses. This wide-ranging book comprises 19 chapters on the various topics including: · Solutions for sustainable fashion and textile industry · Agro and bio waste in the fashion industry · Innovating fashion brands by using textile waste · Waste in handloom textiles · Business paradigm shifting: 21st century fashion from recycling and upcycling · Utilization of natural waste for sustainable textile coloration · Circular economy in fashion and textile from waste · Future pathways of waste utilization for fashion · Sustainable encapsulation of natural dyes from Plant waste for textiles · Agro-waste applications for bio-remediation of textile effluent

Recycling Virginia Woolf in Contemporary Art and Literature Monica Latham,Caroline Marie,Anne-Laure Rigeade,2021-08-19 Recycling Virginia Woolf in Contemporary Art and Literature examines Woolf's life and oeuvre from the perspective of recycling and provides answers to essential questions such as: Why do artists and writers recycle Woolf's texts and introduce them into new circuits of meaning? Why do they perpetuate her iconic figure in literature, art and popular culture? What does this practice of recycling tell us about the endurance of her oeuvre on the current literary, artistic and cultural scene and what does it tell us about our current modes of production and consumption of art and literature? This volume offers theoretical definitions of the concept of recycling applied to a multitude of specific case studies. The reasons why Woolf's work and authorial figure lend themselves so well to the notion of recycling are manifold: first, Woolf was a recycler herself and had a personal theory and practice of recycling; second, her work continues to be a prolific compost that is used in various ways by contemporary writers and artists; finally, since Woolf has left the original literary sphere to permeate popular culture, the limits of what has been recycled have expanded in unexpected ways. These essays explore today's trends of fabricating new, original artefacts with Woolf's work, which thus remains completely relevant to our contemporary needs and beliefs

Textile Recycling and Sustainable Apparel Designs V.R. Sampath,Shamayita Patra,Pavan K. Gupta,2023-02-24 Synthetic non-biodegradable fibers accounted 60-70% of total world fibers consumption, leads to environmental pollution in many ways. World population, fast fashion, higher production, and per capita consumption leading to a higher amount of textile waste generation every year. Disposal of the waste is the most serious environmental problem, faced by the society. Both waste incineration and waste dumping in landfills have negative environmental impact. The best solution to avoid waste disposal is using biodegradable fiber, recycling textile waste by reusing clothing and household textiles as well as reproduction of fibers from textile waste. This transformation process will focus on the exploitation of research, innovation, and knowledge orientation across all business function and subsector activities towards textile recycling and sustainable apparel design. The present book intends to draw attention towards the various areas in textiles at local, regional, national, and global level to achieve the said targets. It also describes the recent trends and developments in field of recycling and sustainable apparel design. Key Features: 1. Highlights and discusses crucial topic related to sustainable textile fibers, chemical processing, textile engineering, technical textiles, garment, and fashion industry. 2. Throw light on recycling of fibers and use of natural plant extract in healthcare sector. 3. Academicians, industry professionals, research scholars, and students will find this book useful and valuable.

Sorting and Recycling Endosomes ,2015-09-14 Sorting and Recycling Endosomes provides the latest information on endosomes, the receiving compartment for endocytosed cargos, and the donor compartment and sorting station for cargos designated to lysosomes, Golgi, or plasma membrane. In recent years, the importance of endosomes as a sorting and recycling compartment has become increasingly appreciated. As such, scientists from various fields of cell biology, membrane traffic, and beyond, see the needs to communicate and learn about the methods used to investigate the dynamics and functions of endosomes. This book brings together specialists from the field who contribute their expertise on a broad range of biomedical topics that will provide ideal reading for researchers interested in endosomal sorting and recycling. This volume covers the approaches necessary to study the key components that mediate the generation and transport of membrane-bounded carriers from the endosomes, and how membrane trafficking machinery is coordinated with cytoskeletons during these processes. In addition to studies carried out in mammalian cells, other model systems such as worm and yeast are also included. Provides the latest information on endosomes, the receiving compartment for endocytosed cargos, and the donor compartment and sorting station for cargos designated to lysosomes, Golgi, or plasma membrane. Covers an increasingly appreciated field in cell biology Includes both established and new technologies Brings together specialists from the field who contribute their expertise on a broad range of biomedical topics that will provide ideal reading for researchers interested in endosomal sorting and recycling

Membrane Recycling David Evered,Geralyn M. Collins,2009-09-14 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia, in which groups of leading scientists from a range of topics across biology, chemistry and medicine assembled to present papers and discuss results. The Novartis Foundation, originally known as the Ciba Foundation, is well known to scientists and clinicians around the world.

Recycling the Past or Researching History? Philip E. Thompson,Anthony R. Cross,2007-10-01 Recycling the Past or Researching History? brings together an international group of Baptist scholars who explore various issues in Baptist historiography and myths. Contributors examine and re-examine areas of Baptist life and thought about which either little is known or the received wisdom is in need of revision. Historiographical studies include the date Oxford Baptists joined the Abingdon Association, the death of the Fifth Monarchist John Pendarves, eighteenth-century Calvinistic Baptists and the political realm, confessional identity and denominational institutions, Baptist community, ecclesiology, the priesthood of all believers, soteriology, Baptist spirituality, Strict and Reformed Baptists, the role of women among British Baptists, while various myths challenged include the nature of high-Calvinism in eighteenth-century England, baptismal anti-sacramentalism, episcopacy, and Baptists and change. The common theme tying these studies together is that research into Baptist history should deal with the primary sources and not, as has too often been the case, rely uncritically on the scholarship of previous generations.

Resource Recovery and Recycling from Waste Metal Dust Daniel Ogochukwu Okanigbe,Abimbola Patricia Popoola,2023-03-15 This book examines resource recovery and recycling from waste metal dust, including currently used techniques for waste processing and recycling and their applications, with practical examples and economic potentials of the processes. The focus of this book is on resource recovery by suitable treatments and techniques, including those of recovery by-products. For the first time, this book provides a comprehensive, one-stop reference including seminal principles and methods, the advantages and disadvantages of the processes discussed, and the economics of the technology. It will serve as a technical reference for working scientists and engineers, while serving as an educational reference to students studying the waste recovery of metals.

Fate of Biological Contaminants During Recycling of Organic Wastes Kui Huang,Sartaj Ahmad Bhat,Guangyu Cui,2022-11-24 Fate of Biological Contaminants During Recycling of Organic Wastes covers the fate of viruses, HPBs, and ARGs in organic wastes, and their eliminating methods, including composting, vermicomposting and anaerobic digestion. In addition, this work describes the environmental risks associated with the application of excess sludge, livestock and other bio-wastes in soils Fate of Biological Contaminants During Recycling of Organic Wastes will benefit environmental and soil scientists engaged in the latest research regarding risk assessment and remediation techniques in wastewater, and solid wastes, and agricultural wastes. Covers the fate of viruses, HPBs, and ARGs in wastes as well as their environmental risk to the ecosystem Includes applications of earthworm remediation techniques, composting, and anaerobic digestion for organic wastes Introduce the key relationship between viruses, HPBs, ARGs and the microbial community during biological treatment of excess sludge and livestock manure
