## **Hydraulic and Civil Engineering Technology VII**

M. Yang, J.C.G. Lanzinha, P. Samui, 2022-12-23

Engineering technology is of crucial importance to the infrastructure on which modern societies depend, and keeping abreast of the latest research and developments in the field is of vital importance. This book presents the proceedings of HCET 2022, the 7th International Technical Conference on Frontiers of Hydraulic and Civil Engineering Technology, originally due to be held, in Sanya, China, from 25-27 September 2022, but instead held as a fully virtual event on Zoom due to continued uncertainty related to the Covid 19 pandemic. HCET is a platform for the dissemination of research results on the latest advances in the areas of hydraulic and civil engineering technology and environmental engineering, and provides an opportunity for scientists, researchers and engineers from around the world to exchange their findings, discuss developments, and possibly establish a basis for collaboration. A total of 275 submissions were received from international contributors, and all were subjected to a rigorous peer-review process, with each paper reviewed by a minimum of two experts. Papers were also checked for quality and plagiarism, after which, 163 papers were accepted for presentation and publication. Topics covered include the research and development of concrete structure design and analysis, structural mechanics and structural engineering, geological exploration and earthquake engineering, building technology, urban planning, energy, environment and advanced engineering science and applications. The book offers a state-of-the-art overview of recent developments, and will be of interest to all those working in the fields of hydraulic and civil engineering technology.

**Propaganda in the Information Age** Alan  
MacLeod,2019-04-24 Propaganda in the Information Age is a collaborative volume which updates Herman and Chomsky's propaganda model for the twenty-first-century media landscape and makes the case for the continuing relevance of their original ideas. It includes an exclusive interview with Noam Chomsky himself. 2018 marks 30 years since the publication of Edward Herman and Noam Chomsky's ground-breaking book Manufacturing Consent, which lifted the veil over how the mass media operate. The book's model presented five filters which all potentially newsworthy events must pass through before they reach our TV screens, smartphones or newspapers. In Propaganda in the Information Age, many of the world's leading media scholars, analysts and journalists use this model to explore the modern media world, covering some of the most pressing contemporary topics such as fake news, Cambridge Analytica, the Syrian Civil War and Russiagate. The collection also acknowledges that in an increasingly globalized world, our media is increasingly globalized as well, with chapters exploring both Indian and African media. For students of Media Studies, Journalism, Communication and Sociology, Propaganda in the Information Age offers a fascinating introduction to the propaganda model and how it can be applied to our understanding not only of how media functions in corporate America, but across the world in the twenty-first century.

*The Presentation Coach* Graham G. Davies,2011-10-20  
You probably hate giving presentations. You probably hate listening to them too. Why? Because most business presentations are too long, too detailed, too boring...and

submerged under a blizzard of PowerPoint. But the single most important presentational tool known to man isn't a slideshow. It's you. Whether you're speaking to one person across a table, 20 people in a boardroom or 1,000 people in a ballroom, it's all about the words you say and how you say them. The Presentation Coach shows you how to use what you've already got to give you clarity, confidence and impact in every speaking challenge you will ever face. You'll learn the unique Bare Knuckle 5-step process to effective presenting, and how to apply it to all business speaking, from large-scale presentations to one-to-one client meetings. Graham Davies has been coaching high-profile individuals from the worlds of business, politics and entertainment in exactly these techniques for the past 25 years. Now it's your turn. Praise for The Presentation Coach Graham Davies is a brilliantly funny speaker who knows how to inspire and enthuse anyone who sees presenting as a bore, a burden or a source of terror. Nick Robinson, Political Editor, BBC This book really captures Graham's intense and robust sense of coaching. Just like the author, it is amusing, punchy and really comforting to have access to in all presentation situations. Michel Combes, CEO, Vodafone Europe Required reading for anyone who wants their presentations to enthuse rather than euthanize their audience. Tim Curtis, MD, Northern Europe, Land's End Graham is a highly effective presentation coach. He is always honest and gets straight to the point. His book is just as direct and entertaining as he is in person. Nick Jeffery, CEO, Vodafone Global Enterprise I don't know anyone who could wear the label 'the presentation coach' more confidently than Graham. Daniel Finkelstein, Executive Editor, The Times I use Graham's system strictly and religiously in every speech. In fact on almost every important occasion when I need to get

a message across.... You will never regret buying and using this book. George Clarke, MD, Heidelberg UK Graham helped me develop my very own presentation style, true to myself, with high impact and focused very much on the audience. Phil Clarke, CEO Designate, Tesco Graham's approach is ruthlessly robust and utterly practical. This book is the next best thing to seeing him in person, and much less of a strain on your budget. Matthew Wilson, CEO Brit Global Markets ...Davies's compelling book illuminates all the pitfalls and provides a simple guide to allowing personality into presentations - radical stuff indeed! Andy Street, MD, John Lewis Whether you are a Prime Minister, chief executive or anyone else who needs make an impact, then you must read this challenging and innovative book by Graham Davies. Digital Signal Processing Paulo S. R. Diniz, Eduardo A.

B. da Silva, Sergio L. Netto, 2010-09-02 This new, fully-revised edition covers all the major topics of digital signal processing (DSP) design and analysis in a single, all-inclusive volume, interweaving theory with real-world

examples and design trade-offs. Building on the success of the original, this edition includes new material on random signal processing, a new chapter on spectral estimation, greatly expanded coverage of filter banks and wavelets, and new material on the solution of difference equations. Additional steps in mathematical derivations make them easier to follow, and an important new feature is the do-it-yourself section at the end of each chapter, where readers get hands-on experience of solving practical signal processing problems in a range of MATLAB experiments. With 120 worked examples, 20 case studies, and almost 400 homework exercises, the book is essential reading for anyone taking DSP courses. Its unique blend of theory and real-world practical examples also makes it an ideal reference for practitioners.

#### **The Arduous Road to Revolution** Gabriele

Giacomini, 2022-07-04T00:00:00+02:00 The right to rebel

against an authoritarian power is part of liberal and democratic culture. As early as the late seventeenth century, John Locke theorised that if a state abuses its citizens, they have the right to revolt. Nowadays, information and communication technologies can help the early stages of revolt. However, at the same time they also seem to offer the threatened autocrats powerful tools. Failed revolutions that have unfolded in our digital age in countries such as Myanmar, Ukraine, Iran, Egypt, Hong Kong and Belarus, bring to light the great and often successful efforts of authoritarian regimes to use new technologies for surveillance, oppression, propaganda, censorship, and the suppression of fundamental rights. The risk of a drift towards despotism, from which even long-established democracies are not immune, prompts us to ask what skills, rules and institutions might help citizens to defend their freedom when it is under threat, including in the digital sphere.

Digital Signal Processing In High-Speed Optical Fiber Communication Principle and Application Jianjun Yu, Nan Chi, 2020-07-06 This book presents the principles and applications of optical fiber communication based on digital signal processing (DSP) for both single and multi-carrier modulation signals. In the context of single carrier modulation, it describes DSP for linear and nonlinear optical fiber communication systems, discussing all-optical Nyquist modulation signal generation and processing, and how to use probabilistic and geometrical shaping to improve the transmission performance. For multi-carrier modulation, it examines DSP-based OFDM signal generation and detection and presents 4D and high-order modulation formats. Lastly, it demonstrates how to use artificial intelligence in optical fiber communication. As such it is a useful resource for students, researches and

engineers in the field of optical fiber communication.

*Power System and Modelling Relays* ibrahim elnoshokaty, Numerical relays are the result of the application of microprocessor technology in relayindustry.Numerical relays have the ability to communicate with its peers, are economical and are easy to operate, adjust and repair.Modeling of digital andnumerical relays is important to adjust and settle protection equipment in electricalfacilities and to train protection personnel. Designing of numerical relays is employedto produce new prototypes and protection algorithms. Computer models of numericalrelays for the study of protection systems are greatly enhanced when working along withan electromagnetic transient program (emtp). A literature survey has revealed thatprevious

modeling techniques presented a lack of automation in the generation of relay models, or show high complexity in linking the numerical relay models with the power system modeled in the emtp. This thesis describes a new approach of modeling and designing of numerical relays. The proposed methodology employs a Visual C++-based program (PLSA) to obtain from the user the specifications of the relay to be designed, and to process this information to generate the FORTRAN code that represents the functional blocks of the relay. This generated code is incorporated in a PSCAD/EMTDC case using a resource called component, which facilitates the creation of user-custom models in PSCAD/EMTDC. Convenient electrical and logical signals are connected to the inputs and outputs of the PSCAD/EMTDC component. Further additions of digital relay models into the PSCAD/EMTDC case constitute the protection system model. The thesis describes a procedure for designing distance and differential relay models, but the methodology may be extended to design models of other relay elements. A number of protection system studies were performed with the structure created with the proposed methodology. Adjustment of distance and differential relays were studied. Relay performance under CT saturation and the effects of the removal of anti-aliasing analog filter were investigated. Local and remote backup distance protection of transmission lines was simulated. The adjustment of differential protection of power transformer to overcome the effects of inrush current was performed. Power transformer differential protection responses to internal and external faults were considered. Additionally, a set of tests were performed to investigate the consistency of the relay models generated with the proposed methodology. The results showed that

thenumerical relay models respond satisfactorily according with the expected results of thetests.

**Digital Filters and Signal Processing in Electronic Engineering** S M Bozic,R J Chance,1998-10-01 From industrial and teaching experience the authors provide a blend of theory and practice of digital signal processing (DSP) for advanced undergraduate and post-graduate engineers reading electronics. This fast-moving, developing area is driven by the information technology revolution. It is a source book in research and development for embedded system design engineers, designers in real-time computing, and applied mathematicians who apply DSP techniques in telecommunications, aerospace (control systems), satellite communications, instrumentation, and medical technology (ultrasound and magnetic resonance imaging).The book is particularly useful at the hardware end of DSP, with its emphasis on practical DSP devices and the integration of basic processes with appropriate

software. It is unique to find in one volume the implementation of the equations as algorithms, not only in MATLAB but right up to a working DSP-based scheme. Other relevant architectural features include number representations, multiply-accumulate, special addressing modes, zero overhead iteration schemes, and single and multiple microprocessors which will allow the readers to compare and understand both current processors and future DSP developments. Fundamental signal processing procedures are introduced and developed: also convolution, correlation, the Discrete Fourier Transform and its fast computation algorithms. Then follow finite impulse response (FIR) filters, infinite impulse response (IIR) filters, multirate filters, adaptive filters, and topics from communication and control. Design examples are given in all of these cases, taken through an algorithm testing stage using MATLAB. The design of the latter, using C language models, is explained together with the experimental results of real time integer implementations. Academic prerequisites are first and second year university mathematics, an introductory knowledge of circuit theory and microprocessors, and C Language. Provides an unusual blend of theory and practice of digital signal processing (DSP). Discusses fundamental signal processing procedures, convolution, correlation, the Discrete Fourier Transform and its fast computation algorithms. Includes number representations, multiply-accumulate, special addressing modes, zero overhead iteration schemes, and single and multiple instructions.
