Steroid Hormone Receptors: Basic and Clinical Aspects V. K. Moudgil, 2013-03-13 The past few years have witnessed the emergence of steroid hormones as the wonder molecules which generate as much discussion in the scientific literature as they do in a typical living room. This transition has been a result of the tremendous public and scientific interest in the normal functioning of the hormones as well their suggested involvement in several clinical conditions. In the recent past, notable scientific and technological advances have been made in the areas of contraception and regulation of fertility. Steroid receptors are the indispensable mediators of hormonal responses and are complex protein molecules which appear to exist in association with other, yet undefined, proteins and/or factors. Receptors for vitamin D, retinoic acid and the thyroid hormones share structural similarities with steroid receptors, and the roster of this superfamily is still expanding. While our knowledge of the diversity and magnitude of

steroid effects has advanced, the precise mode of steroid hormone action has alluded investigators. This volume brings together an international team of prominent investigators who discuss their most recent work on the basic and clinical aspects of steroid/nuclear receptors. The contributions represent updated versions of the invited presentations made at The Second Meadow Brook Conference on Steroid Receptors in Health and Disease. I am grateful to my colleagues on the Scientific Committee: Etienne Baulieu, Jack Gorski, Benita Katzenellenbogen, David Toft and James WittJiff, who provided the vision and guidance in formulating an out standing program.

COVID and Emerging Infectious Diseases William Tolbert,Neelakshi Gohain,2024-02-13 Over the last two years with the strain of coronavirus having a devastating effect on the world's healthcare system and triggering a global lockdown, one question that has emerged; What, or which infectious disease is going to hit us next? Many infectious diseases prevalent in humans and animals are caused by pathogens that once emerged from other animal hosts. In addition to these established or re-emerging infections, new infectious diseases periodically emerge. In extreme cases they may lead to pandemics as we currently are seeing. The increased urbanization and globalization of the world order with faster connectivity and traveling has further in-creased the risk factors for emerging infections. Despite this, enormous progress has been made in the field of infectious disease in the last few decades. The number of deaths and severe infections because of

diseases like Malaria, HIV, Ebola, Dengue, Yellow fever virus (YFV), Zika etc. have been significantly reduced and diseases like Polio are on the brink of eradication. In particular, the emergence of the devastating SARS-CoV-2 pandemic has revolutionized the field in an unprecedented way. A myriad of vaccine platforms and highly potent therapeutic approaches have been developed by government, industry, academic, and non-governmental organizations. However, the rapid and unparalleled spread of SARS-CoV-2 and its variants, and the amount of toll that it has caused to the public health and global economy also underscores the urgent need to develop broadly cross-reactive, rapidly deployable, and scalable therapeutic platforms. Development of these novel therapeutic modalities also requires a strong emphasis on the functional and mechanistic understanding of how molecular components in a biological process related to emerging infectious diseases work together. Onset of the out-breaks of recent decades including but not limited to SARS-CoV-1, MERS, Ebola virus, Zika virus, Nipah virus, Yellow fever virus, Lassa virus and the ongoing ever devastating SARS-CoV-2 pandemic also highlight the urgent need to devise a future proof pandemic preparedness strategy and the demand for a fast and early response.

Context in Communication: A Cognitive View Gabriella Airenti, Marco Cruciani, Alessio Plebe, 2017-04-03 Context is what contributes to interpret a communicative act beyond the spoken words. It provides information essential to clarify the intentions of a speaker, and thus to identify the actual

meaning of an utterance. A large amount of research in Pragmatics has shown how wide-ranging and multifaceted this concept can be. Context spans from the preceding words in a conversation to the general knowledge that the interlocutors supposedly share, from the perceived environment to features and traits that the participants in a dialogue attribute to each other. This last category is also very broad, since it includes mental and emotional states, together with culturally constructed knowledge, such as the reciprocal identification of social roles and positions. The assumption of a cognitive point of view brings to the foreground a number of new questions regarding how information about the context is organized in the mind and how this kind of knowledge is used in specific communicative situations. A related, very important question concerns the role played in this process by theory of mind abilities (ToM), both in typical and atypical populations. In this Research Topic, we bring together articles that address different aspects of context analysis from theoretical and empirical perspectives, integrating knowledge and methods derived from Philosophy of language, Linguistics, Cognitive Science, Cognitive Neuroscience, Developmental and Clinical Psychology.
