Routledge Handbook of Media Geographies Paul C Adams,Barney Warf,2021-10-27 This Handbook offers a comprehensive overview of media geography, focusing on a range of different media viewed through the lenses of human geography and media theory. It addresses the spatial practices and processes associated with both old and new media, considering media not just as technologies and infrastructures, but also as networks, systems and assemblages of things that come together to enable communication in the real world. With contributions from academics specializing in geography and media studies, the Routledge Handbook of Media Geographies summarizes the recent developments in the field and explores key questions and challenges affecting various groups, such as women, minorities, and persons with visual impairment. It considers geographical aspects of disruptive media uses such as hacking, fake news, and racism. Written in an approachable style, chapters consider geographies of users, norms, rules, laws, values, attitudes, routines, customs, markets, and power relations. They shed light on how mobile media make users vulnerable to tracking and surveillance but also facilitate innovative forms of mobility, space perception and placemaking. Structured in four distinct sections centered around control and access to digital media, mass media, mobile media and surveillance and media and the politics of knowledge, the Handbook explores digital divides and other manifestations of the uneven geographies of power. It also includes an overview of the alternative social media universe created by the Chinese government. Media geography is a burgeoning field of study that lies at the intersections of various social sciences, including human geography, political science, sociology, anthropology, communication/media studies, urban studies, and women and gender studies. Academics and students across these fields will greatly benefit from this Handbook.

Android Malware Detection using Machine Learning ElMouatez Billah Karbab,Mourad Debbabi,Abdelouahid Derhab,Djedjiga Mouheb,2021-07-10 The authors develop a malware fingerprinting framework to cover accurate android malware detection and family attribution in this book. The authors emphasize the following: (1) the scalability over a large malware corpus; (2) the resiliency to common obfuscation techniques; (3) the portability over different platforms and architectures. First, the authors propose an approximate fingerprinting technique for android packaging that captures the underlying static structure of the android applications in the context of bulk and offline detection at the app-market level. This book proposes a malware clustering framework to perform malware clustering by building and partitioning the similarity network of malicious applications on top of this fingerprinting technique. Second, the authors propose an approximate fingerprinting technique that leverages dynamic analysis and natural language processing techniques to generate Android malware behavior reports. Based on this fingerprinting technique, the authors propose a portable malware detection framework employing machine learning classification. Third, the authors design an automatic framework to produce intelligence about the underlying malicious cyber-infrastructures of Android malware. The authors then leverage graph analysis techniques to generate relevant intelligence to identify the threat effects of malicious Internet activity associated with android malware. The authors elaborate on an effective android malware detection system, in the online detection context at the mobile device level. It is suitable for deployment on mobile devices, using machine learning classification on method call sequences. Also, it is resilient to common code obfuscation techniques and adaptive to operating systems and malware change overtime, using natural language processing and deep learning techniques. Researchers working in mobile and network security, machine learning and pattern recognition will find this book useful as a reference. Advanced-level students studying computer science

within these topic areas will purchase this book as well.

The PETA Practical Guide to Animal Rights Ingrid Newkirk,2009-05-26 With more than two million members and supporters, People for the Ethical Treatment of Animals (PETA) is the world's largest animal-rights organization, and its founder and president, Ingrid Newkirk, is one of the most well-known and most effective activists in America. She has spearheaded worldwide efforts to improve the treatment of animals in manufacturing, entertainment, and elsewhere. Every day, in laboratories, food factories, and other industries, animals by the millions are subjected to inhumane cruelty. In this accessible guide, Newkirk teaches readers hundreds of simple ways to stop thoughtless animal cruelty and make positive choices. For each topic, Newkirk provides hard facts,

personal insight, inspiration, ideas, and resources, including: • How to eat healthfully and compassionately • How to adopt animals rather than support puppy mills • How to make their vote count and change public opinion • How to switch to cruelty-free cosmetics and clothing • How to choose amusements that protect rather than exploit animals. With public concern for the well-being of animals greater than ever—particularly among young people—this timely, practical book offers exciting and easy ways to make a difference.

Freedom of Speech Uladzislau Belavusau,2013-10-08 This book considers the issue of free speech in transitional democracies focusing on the socio-legal developments in the Czech Republic, Hungary, and Poland. In showing how these Central and Eastern European countries have engaged with free speech models imported from the Council of Europe / EU and the USA, the book offers valuable insights into the ways States have responded to challenges associated with transformation from communism to Western democracy. The book first explores freedom of expression in European and American law looking particularly at hate speech, historical revisionism, and pornography. It subsequently enquires into the role and perspectives of those European (mandatory) and US-American (persuasive) models for the constitutional debate in Central and Eastern Europe. The study offers an original interpretation of the European model of freedom of expression, beyond the mechanisms of the Council of Europe. It encompasses the relevant aspects of EU law (judgments of the Court of Justice and the harmonised EU instruments) as mandatory standards for courts and legislators, including those in transitional countries of Central and Eastern Europe. The book argues for de-criminalisation of historical revisionism and pornography, and illuminates topics such as genocide denial, the rise of Prague and Budapest as Europe's porno-capitals, anti-Semitism and anti-Gypsyism, religious obscurantism and homophobia, virulent Islamophobia, and the glorification of terrorism. The research methodology in this study combines a descriptive case law assessment (comparative constitutional, public international, and EU law) with a normative critique stemming from post-structuralist scrutiny, rhetoric, postmodern legal movements, legal history, history of ideas, and art criticism. This book will be of interest to students and scholars of, comparative constitutional law, law and society, human rights and European law as well as political philosophers.
