**Contemporary Art Impacts on Scientific, Social, and Cultural Paradigms: Emerging Research and Opportunities** Strehovec, Janez,2020-05-29 Art is a concept that has been used by researchers for centuries to explain and realize numerous theories. The legendary artist Leonardo da Vinci, for example, was a profound artist and a genius inventor and researcher. The co-existence of science and art, therefore, is necessary for global appeal and society's paradigms, literacy, and scientific movements. *Contemporary Art Impacts on Scientific, Social, and Cultural Paradigms: Emerging Research and Opportunities* provides emerging research exploring the theoretical and practical aspects of present post-aesthetic art and its applications within economics, politics, social media, and everyday life. Featuring coverage on a broad range of topics such as media studies, contemporary storytelling, and literacy nationalism, this book is ideally designed for researchers, media studies experts, media professionals, academicians, and students.

**Urban Versioning System 1.0** Matthew Fuller,Usman Haque,2008 In this pamphlet, architect Usman Haque and media theorist Matthew Fuller look beyond established precepts and explore an alternate technology of space making derived from the politics of code itself. In a conversation of sorts between the protocols of Free, Libre, Open Source Software (FLOSS) licenses and those of spatial construction (building codes, zoning ordinances), the authors attempt to map out a quasi-license by which the architecture of the city might be remade in the manner of FLOSS software, and suggest a series of 76 constraints by which this license might be manifest in the open, collaborative production of urban space.--Publisher's Web site.

**Creo Parametric 1.0** Roger Toogood,Jack E. Zecher,2011-12-15 The eleven lessons in this tutorial introduce you to the design capabilities of Creo Parametric 1.0. The tutorial covers the major concepts and frequently used commands required to advance from a novice to an intermediate user level. Major topics include part and assembly creation, and creation of engineering drawings. Also illustrated are the major functions that make Creo Parametric a parametric solid modeler. These topics are further demonstrated in the video files that come with every book. Although the commands are presented in a click-by-click manner, an effort has been made, in addition to showing/illustrating the command usage, to explain why certain commands are being used and the relation of feature selection and construction to the overall part design philosophy. Simply knowing where commands can be found is only half the battle. As is pointed out numerous times in the text, creating useful and effective models of parts and assemblies requires advance planning and forethought. Moreover, since error recovery is an important skill, considerable time is spent exploring the created models. In fact, some errors are intentionally induced so that users will become comfortable with the “debugging” phase of model creation. At the

end of each lesson is a short quiz reviewing the new topics covered in that chapter. Following the quiz are several simple exercise parts that can be created using new commands taught in that lesson. In addition to these an ongoing project throughout the book is also included. This project consists of several parts that are introduced with the early lessons and finally assembled at the end.
