ATP and the Heart Joanne S. Ingwall, 2012-12-06 ATP plays a central role in the two leading causes of cardiac morbidity and mortality in the western world: ischemia and heart failure. We are in our infancy applying what is known about biology and chemistry of ATP toward developing effective therapies for these diseases. In this volume, the current understanding of the chemistry and biology of ATP specifically in the cardiomyocyte is presented. New insights into ATP have been gleaned using biophysical techniques allowing dynamic measurement of chemical events in the intact beating heart and using new animal models in which cardiac proteins are either over expressed, deleted or harbor specific mutations. This book provides a summary of the basic understanding and includes illustrations of why ATP and the Heart is important to both the clinician and scientist.

Extracellular ATP and adenosine as regulators of endothelial cell function

Evgenia Gerasimovskaya, Elzbieta Kaczmarek, 2010-04-26 Extracellular purines and pyrimidines (ATP, ADP, UTP and adenosine) are released into the extracellular milieu in response to a variety of stress conditions and act as important regulators of vascular homeostasis. This new book is uniquely focused on the signaling actions of extracellular purines in endothelial cells and the crucial role of extracellular purines in regulation of angiogenesis, vascular tone, cell permeability, wound healing, inflammation and cell-to-cell communication. This book examines the responses of endothelial cells, originating from various tissues (such as cornea, pancreas and uterus), to extracellular nucleotides and adenosine under physiological and pathological conditions, i.e. pregnancy, hypoxia,

hypertension, inflammation and diabetes. In the book's 12 chapters, the role of purinergic signaling in endothelium-dependent tissue perfusion, regulation of endothelial barrier function, and angiogenesis are discussed. The mechanisms of ATP release and its role in intercellular communication are also presented. In addition, the book provides the most up to date mechanisms of extracellular nucleotide metabolism by purine-converting ecto-enzymes and their contribution to purinergic signaling in endothelial cells originating from various vascular beds. This book is a valuable resource for biomedical research scientists, clinical scientists, graduate students and health science professionals interested in the mechanisms of extracellular purine function in endothelial cells under physiologic and pathologic conditions.

The ATP Tour Richard Evans,2000 The official illustrated guide of a decade of tennis on the ATP Tour, with in-depth profiles of the ten greatest players.

Momentum on the ATP Tour Daniel McCain,2013-05-24 From the bestselling author of Building A Champion & The I Formation comes the the show & tell of Men's professional tennis: Momentum on the ATP Tour, Volume 1. What causes momentum shifts on the tennis court? Does momentum really exist? Pros on the ATP World Tour debate this question with their answers, revealing unique perspectives on how they achieved success in the pros. This book reveals the views of past & present ATP Touring Professionals, their coaches, the media that cover them, & the psychologists that guide them, & explores the background & implications of what they discuss. Interviews & research on the ebbs and flow of performance on the tennis court show a range of philosophies on competing, training, life

on the tour, & what it takes to make it in the pros. Despite the varying views presented, definite patterns of thought begin to emerge, regardless of who it's coming from. ATP Tour veterans discuss what causes momentum shifts in matches, recall matches they played or coached through incredible comebacks, major moments of choking, tempers flying, & even how specific points in matches became pivotal in the direction of their careers. Interviews include grand slam champions, NCAA champions, former players ranked in the top 20 in the world, & household tennis names such as Vic Braden, Tim Mayotte, legendary Stanford Coach Dick Gould, & more. Don't miss Volume 2 of Momentum, also available on Amazon, which explores how ATP pros physically generate, control, maintain, & use the momentum of the body & racquet to execute their shots. Graphic illustrations & multiple exposure taken from frames of video reveal pros executing the same b.i.o.m.e.chanics. Filled with images, analysis, & research from the USTA, ITF, & the ATP, this volume gives readers a visual array of the science behind the strokes.

A Short Note on the Atp Fund of Denmark Dimitri Vittas, 2012 The Danish ATP (Arbejdsmarkedets Tillaegspension or Labor Market Supplementary Pension) fund is a public pension fund that was created in 1964 to complement the universal pension benefit that is financed from general tax revenues and is paid to all old-age residents. When it was created, participation in ATP was compulsory on most working people. But over the last decade or so compulsory coverage has been expanded to most recipients of transfer income. Contribution amounts are set in absolute terms, but are low relative to earnings (less than 1 percent of average earnings). ATP has benefited from scale economies and compulsory worker participation and has been able to operate with high efficiency and low

costs. Its investment performance has been uneven over the years, reflecting the applied investment policies and rules as well as prevailing financial conditions. In recent years, it has been a leader among Danish pension institutions in adopting innovative investment policies and has enjoyed an enviable record of high investment returns and low operating costs. In addition, it has long offered deferred group annuities with guaranteed benefits and periodic bonuses (with profits policies). However, ATP also suffers from several weaknesses and shortcomings. It has a cumbersome governance structure, rooted in labor market relations and the role of social partners, while its group annuities have been based on rather 'idiosyncratic' risk-sharing arrangements. Nevertheless, it took the lead in using long-dated interest-rate swaps in euro markets and recently created a department that specializes in hedging its pension liabilities. And it is in the process of adopting a new plan for guaranteed benefits that aims to enhance the management of both investment and longevity risks.

ATP-gated P2X receptors in health and disease Andrea Nistri, Geoffrey Burnstock, Baljit S Khakh, Rashid Giniatullin, 2015-01-05 Extracellular ATP is currently recognized as one of the most widely distributed neurotransmitters and neuromodulators in the peripheral and central nervous system. ATP-gated P2X receptors are expressed by neurons, glial and many other non-neuronal cells and represent an attractive target for therapeutic interventions. Diverse molecular and cellular mechanisms have been identified for P2X receptor functioning, including the ability to enlarge the size of the ion pore associated with the release of several key immune molecules. A major recent breakthrough was the determination of the X-ray crystal structures of zebrafish P2X4 receptor in ATP-

bound and ATP-free states. The P2X receptor research field is rapidly growing, as evidenced by the almost 2000 papers published in the last 5 years. However, despite the fundamental signalling function of extracellular ATP in the nervous system, the widespread roles of P2X receptors have not been widely elucidated and presented in textbooks. In this volume of papers we aim to gather a collection of high quality papers, detailing the latest insights from the most accomplished international P2X receptor researchers. Importantly, basic research into P2X receptors has a strong translational impact and our collection of articles could be a valuable guide for the development of new pharmacological and biotechnological tools addressing the function of P2X receptors. Within this collection we plan to cover receptor structure-function relationships, receptors trafficking, to highlight the special properties of P2X receptors and their pharmacological profiles, and to describe the translational aspects of cellular ATP signaling in pain and in other neurological and vascular diseases.

Molecular Structure, Function, and Assembly of the ATP Synthases Sangkot Marzuki, 2012-12-06 In recent years, the ATP synthase (H^+ -ATPase, FoF₁ATPase) has been the subject of intensive investigations in many laboratories. The major reason for this lies in the fact that this enzyme complex catalyses one of the most important reactions in living cells, namely the synthesis of ATP utilizing the energy from an electrochemical transmembrane H^+ gradient, generated by the cellular respiratory chain or by the light reactions of photosynthetic organisms. The mechanism by which the H^+ motive force is utilized to drive the synthesis of ATP is one of the major unsolved problems in biochemistry. Thus, the fundamental information concerning the-molecular structure and the mechanism

of assembly of the ATP synthase is of major significance in cell biology. A seminar/workshop on the Molecular Structure, Function and Assembly of the ATP synthases was held in April, 1987 at the East-West Center, University of Hawaii, Honolulu, Hawaii, to promote exchange of information between laboratories actively engaged in the study of the ATP synthases, and to provide a forum for discussion and coordination of data derived from molecular, genetic and biochemical approaches used in different laboratories. This volume summarizes the result of the seminar/workshop, in the form of a collection of papers presented at the meeting, and provides an overview of current work in this rapidly progressing area of research.

The Role of Water in ATP Hydrolysis Energy Transduction by Protein Machinery Makoto Suzuki, 2018-05-07 This book introduces recent progress in biological energetics from ATP hydrolysis to molecular machineries. The role of water is now recognized to be essential in biological molecular energetics. Although energetics is a rather distant field to many biologists, any working models for protein machineries such as

protein motors, transporters, and other enzymes must be consistent with their energetics. Therefore, the book is intended to help scientists build systematic models of biomolecular functions based on three categories: (1) ATP hydrolysis reactions including ionic hydration and protonation-deprotonation of biomolecules, (2) protein-ligand/protein-protein interactions including hydration-dehydration processes, and (3) functioning mechanisms of protein machineries based on water functions.

Glutamate and ATP at the Interface of Metabolism and Signaling in the Brain Vladimir Parpura, Arne Schousboe, Alexei Verkhratsky, 2014-09-18 ATP acts as main energy source and is pivotal for numerous signaling cascades both inside the cells (by fuelling various transport systems and donating phosphate groups) and between the cells (by chemical transmission). Similarly glutamate acts as an important molecule for both intercellular signaling through glutamatergic transmission and cell energetics by contributing to ATP production. In this collection of chapters, written by the leading experts in the field of cell metabolism and energetics, intracellular signaling and neurotransmission we covered various aspects of the interfacing between these two fundamental molecules. This book will be particularly useful for researchers, students, physicians and psychotherapists working in the field of neurobiology, neurology and psychiatry.

Microplanktonic ATP-biomass and GTP-productivity Associated with Upwelling Off Pt. Sur, California Sherman Hughes Bronsink, 1980 Microplanktonic ATP-biomass and GTP-productivity were studied in upwelling features off Pt. Sur, California. Biomass, determined by adenosine triphosphate (ATP) and chlorophyll a, was found to have a definite preferential location in the strong gradients of temperature and nutrients on the

equatorward edge of the feature. Productivity, as sampled using the new method of guanosine triphosphate (GTP) sampling was found to be high throughout the thermo-nutrient gradient associated with an upwelling feature in an early stage of development. The measurement of productivity and 'growth potential' using GTP and GTP/ATP ratios was found to be a valuable tool in examining rapidly changing upwelling features. Preliminary results obtained using the GTP technique suggests a relationship between the flux of nutrients across ocean fronts and planktonic productivity associated with frontogenic coastal upwelling systems.
