Rodent Transplant Medicine Weihua Gong,2023-01-01 This book introduces transplantation in rodents as useful tools used in studying transplant immunobiology. Several solid organs (kidney, heart, liver) transplant models in rodents are described in this book. It can help surgical quality and save surgical time. The first part of the book provides a review of rodent transplant tolerance induction, the role of gender and body-weight in rodent transplantation, surgical instruments and organ preservation solutions. In the second part of the book, various organ-transplantation techniques in rodents are discussed in individual chapters. This book presents uniform surgical procedures in mouse and rats, which produce comparable data, efficiently enhancing the translational research from bench to non-human primates and beyond. In this second edition, authors updates its recent progress. In addition, 3 chapters in mouse organ transplantation are added. It will be of great value to transplant researchers, research fellows and clinicians in many surgical specialties.

Applications of Genome Modulation and Editing Paul John Verma,Huseyin Sumer,Jun Liu,2022-06-13 This volume details generation of gene-edited cell lines and organisms as models for human diseases, pest control, and large animal welfare and production outcomes. Chapters guide readers through gene regulation, editing, screening of cell lines, genome editing, and an overview of the tools for efficient genome editing including; ZFNs, TALENs, and CRISPR. Written in the format of the highly successful *Methods in Molecular Biology* series, each chapter includes an introduction to the topic, lists necessary materials and reagents, includes tips on troubleshooting and known pitfalls, and step- by-step, readily reproducible protocols. Authoritative and cutting-edge, *Applications of Genome Modulation and Editing* aims to be a useful and practical guide for researchers to commence or advance their study in this field.

Male Reproductive Toxicology Robert E. Chapin,Jerrold J. Heindel,2013-10-22 *Methods in Toxicology, Volume 3: Male Reproductive Toxicology, Part A*, deals with the male reproductive system and discusses methods that will help identify toxicant-induced changes at all levels in living organisms. It is important to realize that a toxic effect does not occur in a vacuum. All work in toxicology must be predicated on a demonstrated adverse effect in vivo. If good toxicology cannot exist in a vacuum, then there must be a structure. Thus, the book begins by presenting a few models as examples of the ways experiments could be grouped to define the toxicity of a chemical. This is followed by separate chapters on methods such as male mouse sexual behavior test; in vitro techniques for assessing pituitary secretory function; histological methods for preservation of the rat testis; procedures for assessing testicular sperm head counts in mice, rats, and dogs; and guidelines for conducting rodent dominant lethal tests. Subsequent chapters cover topics such as methods for the isolation and purification of Leydig cells from rat and mouse testes, and techniques used in semen analysis and fertility assessment in the rabbit.
