*Flammability of Cartoned Lithium Ion Batteries*  
R. Thomas Long Jr.,Jason A. Sutula,Michael J. Kahn,2014-05-12 This SpringerBrief summarizes a full-scale, reduced commodity fire testing comparison of cartoned Lithium ion batteries and FM Global standard commodities in a rack storage configuration, as reported by FM Global. Tests evaluate the flammability characteristics of the materials and the effectiveness of ceiling level only sprinkler protection. The testing methods, discussed in depth, are scaled down from standard commodity classification testing due to the inordinate costs of Li-ion batteries. Small format Li-ion battery commodities represent both commercially available battery formats and Li-ion battery containing devices. The selected Li-ion battery types are individual 18650 format cylindrical cells, power tool packs comprised of 18650 format cells and polymer cells. The selected comparison commodities are the FM Global standard Class 2 and Cartoned Unexpanded Plastic (CUP). The results offer insight into the combined effects of different storage heights, ceiling height, protection system design, battery density, state of charge and battery type. *Flammability of Cartoned Lithium Ion Batteries* is intended for practitioners as a tool for analyzing commodity testing methods and providing data about potential

hazards. Researchers working in a related field will also find the book valuable.

**DIY Lithium Batteries** Grayson Sissney,2018-04-07  
Batteries have become such a part of our everyday lives that we do not notice them anymore, yet they serve essential functions. Think about the battery that is keeping your phone function or the battery in your laptop that allows you to work at remote locations. Electric bikes, hoverboards, digital cameras and even some types of vehicles rely on lithium batteries to power their electronics in the modern-day world. The problem is, lithium battery packs can be quite expensive, usually going for at least over \$200 and they are obviously not tailor-made to fit your particular demands. Deciding to build your own DIY lithium battery pack is a great decision, and picking up

this book tells me that you are interested in doing this. In this guide, I cover everything you need to know about building custom, tailor-made lithium battery packs. You decide what you want; then you build it. By choosing the particular specifications of a battery pack yourself, you can ensure that the pack can be customized toward the requirements of the project you are working on. I start my guide by telling you more about the process of building a lithium battery pack, including what you can do with such a pack and where they can be used. I also cover the basics of the different lithium battery types that you will find on the market today and point out which ones are preferred over the others, as well as why they are the preferred options. In addition to explaining all the terminology and other aspects there are to know about the process of building a DIY lithium battery pack, I also provide a complete step-by-step guide that tells you how you can plan the layout of your first lithium battery pack, how to find the right material and tools that will help you build a working, high-quality battery pack, and I also cover the process of installing a battery management system, an essential part of a battery pack that lets you effectively charge and discharge the device without causing an imbalance in the capacity or charge rate of any batteries included in the pack. Another relevant section covered in my guide is the safety guidelines that surround the building of your own DIY lithium battery pack. These safety guidelines should not be taken lightly, as potential hazards have occurred in the past with

people who worked with lithium errors. Even though most hazards are not considered potentially harmful and usually only includes poor performance of the battery cell that has been affected, imbalances in the charge and discharge of these battery cells could potentially lead to more serious complications, such as the batteries exploding or catching on fire.
