Field-Programmable Logic and Applications: Reconfigurable Computing Is Going Mainstream Manfred Glesner,Peter Zipf,Michel Renovell,2003-08-02

This book constitutes the refereed proceedings of the 12th International Conference on Field-Programmable Logic and Applications, FPL 2002, held in Montpellier, France, in September 2002. The 104 revised regular papers and 27 poster papers presented together with three invited contributions were carefully reviewed and selected from 214 submissions. The papers are organized in topical sections on rapid prototyping, FPGA synthesis, custom computing engines, DSP applications, reconfigurable fabrics, dynamic reconfiguration, routing and placement, power estimation, synthesis issues, communication applications, new technologies, reconfigurable architectures, multimedia applications, FPGA-based arithmetic, reconfigurable processors, testing and fault-tolerance, crypto applications, multitasking, compilation techniques, etc.

Database Machines and Knowledge Base Machines Masaru Kitsuregawa,Hidehiko Tanaka,2012-12-06 This volume contains the papers presented at the Fifth International Workshop on Database Machines. The papers cover a wide spectrum of topics on Database Machines and Knowledge Base Machines. Reports of major projects, ECRC, MCC, and ICOT are included. Topics on DBM cover new database machine architectures based on vector processing and hypercube parallel processing, VLSI oriented architecture, filter processor, sorting machine, concurrency control mechanism for DBM, main memory database, interconnection network for DBM, and performance evaluation. In this workshop much more attention was given to knowledge base management as compared to the previous four workshops. Many papers discuss deductive database processing. Architectures for semantic network, prolog, and production system were also proposed. We would like to express our deep thanks to all those who contributed to the success of the workshop. We would also like to express our appreciation for the valuable suggestions given to us by Prof. D. K. Hsiao, Prof. D.

The 30 revised regular papers presented together with 10 short papers and 13 poster sessions were carefully selected from 135 submissions. The papers are organized in topical sections on VLSI design, design and modeling of digital circuits and systems, testing and verification, design for testability, testing memories and regular logic arrays, embedded systems: hardware/software co-design and verification, emerging technology: nanoscale computing and nanotechnology.

Neural Computation in Hopfield Networks and Boltzmann Machines James P. Coughlin, Robert H. Baran, 1995 One hundred years ago, the fundamental building block of the central nervous system, the neuron, was discovered. This study focuses on the existing mathematical models of neurons and their interactions, the simulation of which has been one of the biggest challenges facing modern science. More than fifty years ago, W. S. McCulloch and W. Pitts devised their model for the neuron, John von Neumann seemed to sense the possibilities for the development of intelligent systems, and Frank Rosenblatt came up with a functioning network of neurons. Despite these advances, the subject had begun to fade as a major research area until John Hopfield arrived on the scene. Drawing an analogy between neural networks and the Ising spin models of ferromagnetism, Hopfield was able to introduce a computational energy that would decline toward stable minima under the operation of the system of neurodynamics devised by Roy Glauber. Like a switch, a neuron is said to be either on or off. The state of the neuron is determined by the states of the other neurons and the connections between them, and the connections are assumed to be reciprocal - that is, neuron number one influences neuron number two exactly as strongly as neuron number two influences neuron number one. According to the Glauber dynamics, the states of the neurons are updated in a random serial way until an equilibrium is reached. An energy function can be associated with each state, and equilibrium corresponds to a minimum of this energy. It follows from Hopfield's assumption of reciprocity that an equilibrium will always be reached. D. H. Ackley, G. E. Hinton, and T. J. Sejnowski modified the Hopfield network by introducing the simulated annealing algorithm to search out the deepest minima. This is accomplished by - loosely speaking - shaking the machine. The violence of the shaking is controlled by a parameter called temperature, producing the Boltzmann machine - a name designed to emphasize the connection to the statistical physics of Ising spin models. The Boltzmann machine reduces to the Hopfield model in

the special case where the temperature goes to zero. The resulting network, under the Glauber dynamics, produces a homogeneous, irreducible, aperiodic Markov chain as it wanders through state space. The entire theory of Markov chains becomes applicable to the Boltzmann machine. With ten chapters, five appendices, a list of references, and an index, this study should serve as an introduction to the field of neural networks and its application, and is suitable for an introductory graduate course or an advanced undergraduate course.--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. Crache Mark Budz,2004-11-23 It's a post-everything world, so how could everything possibly go wrong? When the ecotecture starts to degrade on the asteroid of Mymercia--killing a workgroup on the surface--Fola Hanani miraculously survives. A former missionary, she's hacked a living out of a gengineered ecology built after the Armageddon of overheating, overpopulation, over-everything. Now she has to find out what's causing a catastrophic biosystem failure before everyone else on Mymercia is killed. Meanwhile, onworld, in a trailer park of migrant workers, a washed-out one-hit wonder named L. Mariachi plays the guitar for a community suffering from a contagious form of soul loss. It's a song that Fola's implanted IA--information agent--thinks she needs to hear. Because what is happening to these lost souls is spreading at quantum speed to everyone else. Something or someone is trying to reprogram the system with the ultimate virus. And as virtuality becomes reality in this post-ecocaust world of plug-in sex components, old-world medicine women, and the cheesiest pop culture, humanity itself is about to crash. . . .

Clade Mark Budz, 2007-12-18 IT'S A POST-ECOCAUST WORLD. WELCOME TO IT. In the San Jose of tomorrow, all of nature is gengineered—from the warm-blooded plants to the designer people. But even in a rigidly controlled biosystem, with its pheromone-induced social order, the American dream is still the American dream. Caught between these new-old worlds, Rigo is on his way up—he's going to be part of tomorrow, even if it means he has to leave today behind. Written off as a sellout on the streets of his old 'hood, Rigo's got his own ap in an aplex, a 9-to-5er, and a girl. He's got opportunity. If he works hard, his job with a heavyweight politicorp could give him a chance to move up in the clades. But when he's chosen as part of a team to construct a new colony on a nearby comet, Rigo smells a setup. And when disaster strikes, he learns that if there's a way to bend the rules, there's also a way to break them...
